[Drawer](#)

[Threadlist](#)

[Multiselect](#)

[Automatic email restyling](#)

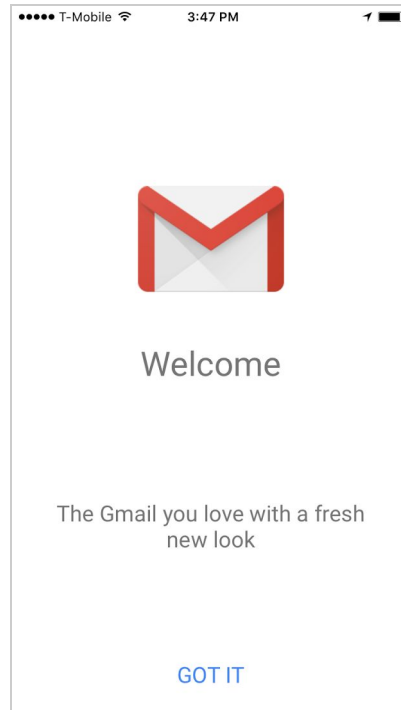

[Conversation view](#)

The Gmail app for iOS is getting a new look—similar to the Android app—including new colors, fonts, icons, and other User Interface (UI) elements. These changes are based on [material design](#) principles.

The new app also includes popular features like undo send and swipe to archive (or delete), as well as faster search and various accessibility improvements.

Here's a review of the UI changes and how they impact familiar Gmail tasks.

Warm Welcome experience

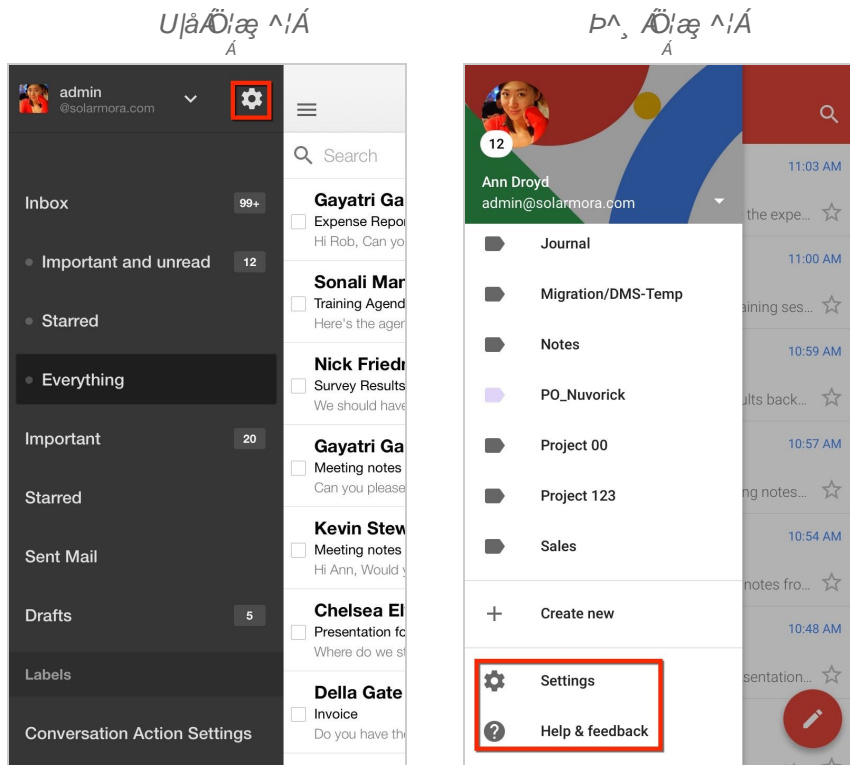

First-time users of the new Gmail app for iOS will see a warm welcome screen introducing them to the new version of the app.

Inbox view changes

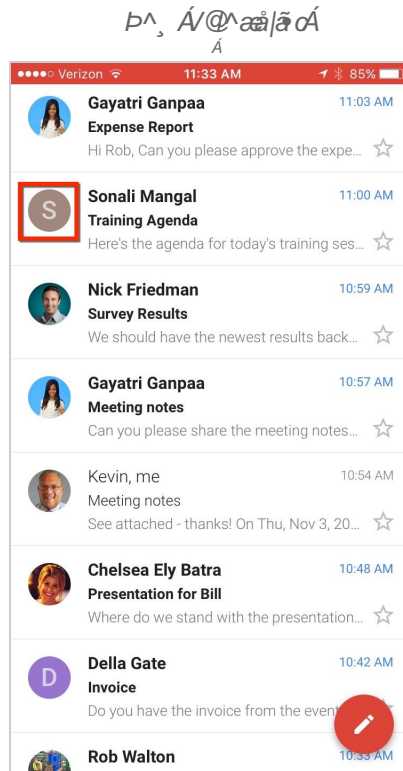

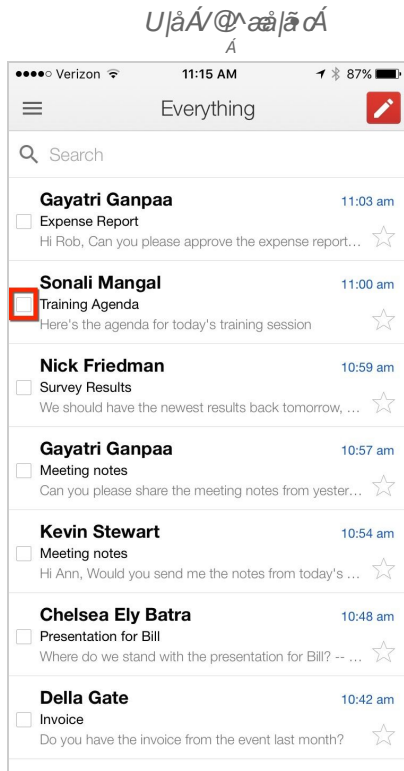

- Updated menu bar and icons
- New larger, more readable font
- Round avatars
- Floating Compose button

Drawer

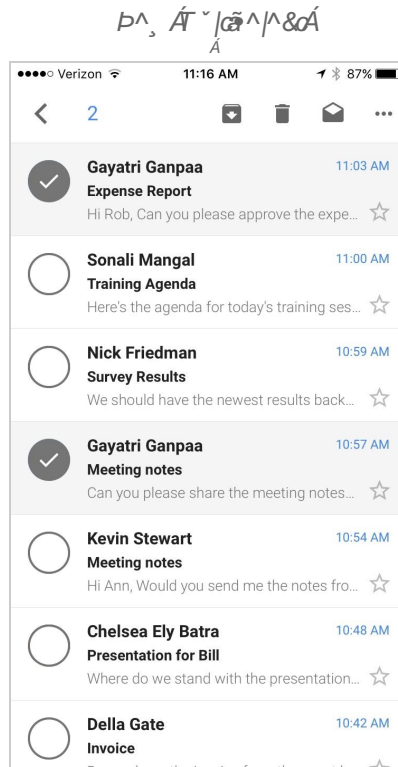

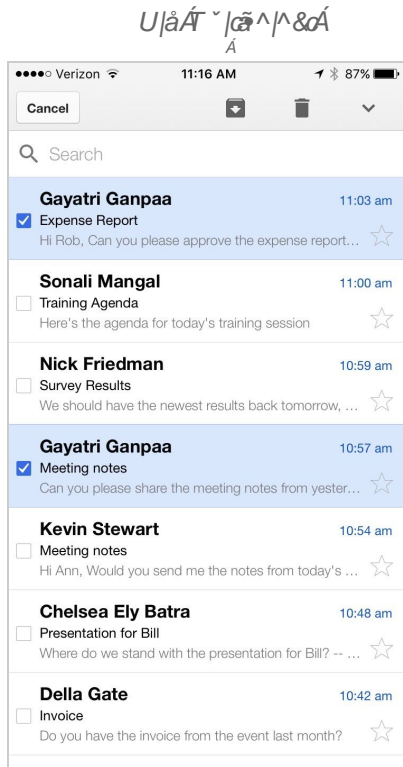

- “Settings” and “Help & Feedback” moved to the bottom of the drawer

Threadlist

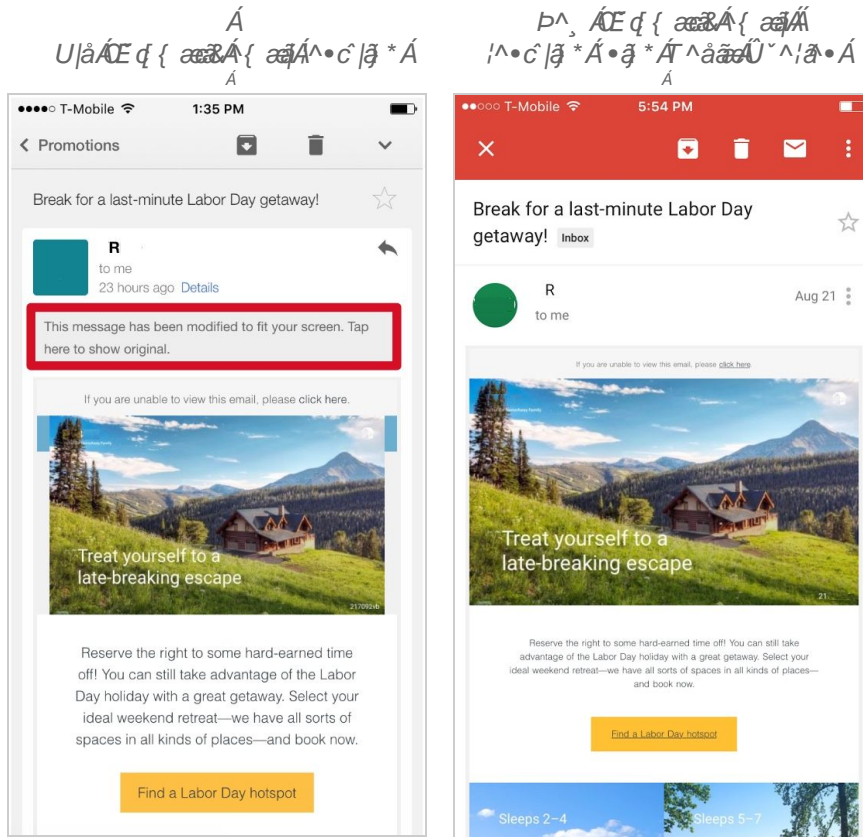

- Checkboxes restyled to selectable Avatars
- Compose location changed

Multiselect

- Mark as read/unread more prominent
- Tap avatars to multi-select

Automatic email restyling

- No more modification of emails for mobile viewing. [Media Queries](#) allow for responsive formatting for every device.
