

Pixel 10 Pro Fold

repair manual

Version 2.0, 2025

Google recommends that you seek professional assistance for all device repairs.

Self service repair isn't recommended unless you are an adult with the technical expertise to safely repair electronic devices. If you choose to perform self repair, you agree to assume the risk associated with such repair.

Use caution if you engage in repair.

When you open or repair your device, be careful of electric shock, device damage, fire and personal injury risks, and other hazards. Before you service the product, read the full set of [precautions](#) in this document.

This manual is organized into sections for easy and intuitive navigation.

Welcome!

We are here to help.

At Google, we innovate, design, and build to create helpful and sustainable products. Product longevity is important to us and repairability is part of that. Repair enables our products to stay in-use and out of landfills.

If you have any questions or need support, please reach out.

support.google.com

Precautions

Safety is a top priority for Google. Users should work in a safe environment and have the necessary skills and training to complete the repairs safely.

Repair flows

Here, we have a flow chart of the most efficient repair methods.

Disassembly

Each section contains a list, in the order of device disassembly, of prerequisite steps, tools, fixtures, and parts to complete the repair.

Assembly

For each disassembly, we provide a guide to reassemble. This might include rework steps for certain components.

Troubleshooting and software

Use the diagnostic steps and tests recommended in this section to identify the source of device problems and issues.

Revision history

Version	Date	Change description
v1.0	August 15, 2025	<p>First release</p> <ol style="list-style-type: none"> 1. Revise service trim pictures. P.55,P.56,P.58,P.59,P.63,P.64,P.66,P.67 2. Modify the wording. P.60, P.68 3. Increase the opening pick insertion depth to from 3.5mm to 5.0 mm. P.78, P.80 4. Add picture to identify the area. P.152, P.153
v1.1	September, 2025	<ol style="list-style-type: none"> 5. Modify the direction of insert feeler gauge. P.201 6. Remove the duplicate page P.272 7. Revise the note. P.180, P.184 8. Remove the index of top speaker liner. P.236 9. Revise the note and picture for Rcam's PSAs. P.137 10. Correct the GPNs. P.230, P.235
V2.0	January, 2026	<ol style="list-style-type: none"> 1. Add Rework part GPN G806-14390-01 and instruction. P.32, P.223, P.238. 2. Modify the wording. P.181, P.265. 3. Add the note for removing Mic 1/ 3 liner. P.146. 4. Correct the indicator color. P.72, P.73 5. Modify the flip battery disassembly process. P.220

Pixel 10 Pro Fold repair manual

Precautions

Important: Before you begin

Be careful if you engage in repair

When you open or repair the device, be careful of electric shock, device damage, fire and personal injury risks, and other hazards.

Always perform repairs in a clean work space with correct ventilation and no combustible materials.

Make sure that there are no additional screws or small parts left in the device after assembly.

Before you service the product, read the full set of precautions in this document.

Use caution: Batteries should be carefully handled, and could be dangerous when damaged

- Fully discharge device battery before you attempt repair.
- Never bend, dent, puncture, or use tools to pry the battery.
- Store batteries in the replacement part packaging as soon as possible after removal to prevent damage.
- If a battery begins to vent, cover it in sand or use gloves and tongs to keep the battery in a fire safe container as soon as possible.
- Take care to prevent shorting of battery terminals or damage of the battery, as it could result in fire or overheating.
- Dispose of the battery according to local regulations.

Use caution Pixel 10 Pro Fold contains a class 1 laser module

The design of the device incorporates optics and protective housing such that there's no access to a level of laser radiation above class 1 during normal use or approved servicing.

Use of controls or adjustments and performance of procedures other than those specified herein might result in hazardous radiation exposure.

Important: Before you begin

Use caution Part handling – glass

- Wear protective gloves and safety glasses when you handle damaged parts.
- Use protective film when you remove damaged parts.
- After removal, store the damaged part in the replacement part packaging as soon as possible to prevent injury.

Tools and fixtures

The use of Google-authorized tools and fixtures is **strongly recommended** to repair a device in a safe and effective manner.

Use caution:

- We *don't* recommend that you perform repairs without the specified tools and fixtures.
- Improper use of tools and fixtures might result in injury to yourself, the user of the device or other third parties, along with damage to the product, tools, fixtures, replacement parts, or other spare parts.

Important: Before you disassemble the device

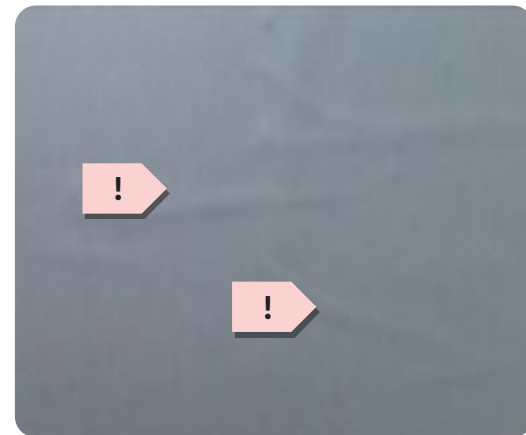

- Disconnect the device from all power sources before any disassembly.
- Make sure that the battery is fully discharged before any disassembly.
- If the phone battery shows signs of swelling or damage, or if the phone feels hot or emits a strong odor, *don't* attempt disassembly. Please reach out to Google [customer support](#).
- Take care not to expose the phone or its components to liquids after disassembly.

Use caution ⚠

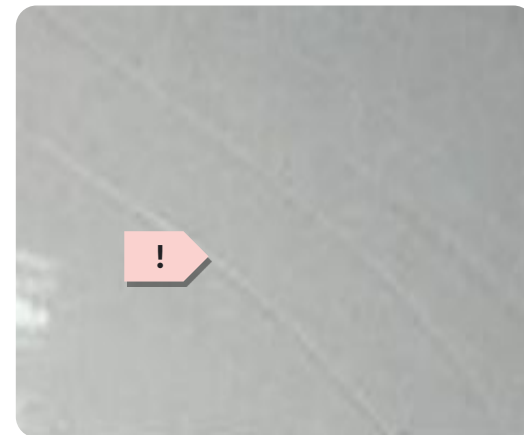

Examples of unacceptable battery conditions that aren't suitable for repair*

Pouch damage

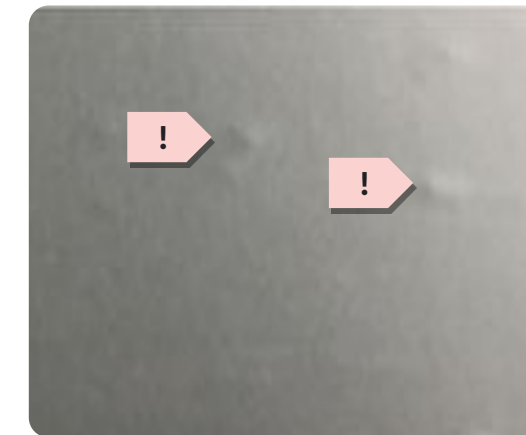

Line protrusion

Scratch

Contamination mark

Dot protrusion

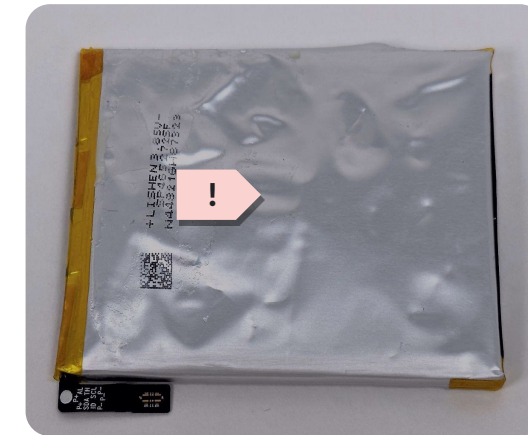

Dent

Bubbling

Imprinted line

Swelling or electrolyte leakage

*These are examples of potentially dangerous battery conditions but *don't* reflect all possible dangerous conditions. Please follow the general safety guidance outlined in this document.

 - Not hidden
  - Hidden

💡 After removal, always replace with a new screw

Each screw is critical to the safe continued operation of the phone. As the thread locking adhesive can't be reactivated, always replace it with a new screw after removal.

Inner display touch screen calibration process

Important!

Complete the following before you boot up the device:

- Except for the inner display **pre-installed user protective film**, nothing should touch the inner display. This includes protective films, cases, fingers, tape, labels, scratch covers, adhesives, and debris.
- The device should be in **unfold** mode and open completely.
- The device should be on a flat surface. *Don't* hold it in your hands.

After the above conditions are met, press the power button and power on the device. *Don't* touch the device until it's fully booted into the user operating system.

Display touch calibration

After any repair that requires you to open the phone, complete the display touch calibration during first boot.

Touch function

If this process isn't followed, the touch function of the screen might not work as intended.

ESD protection

Electro Static Discharge (ESD) could damage components, so it's important to work in an ESD-safe environment during repair.

Follow these four steps to keep ESD safe:

Stay grounded

Carry out repairs on an ESD mat, and the person who repairs the device should wear a grounded ESD strap.

Avoid static buildup

Don't wear synthetic fibers such as fleeces that could generate static.

Did you know?

ESD is the sudden flow of electricity through two electrically charged objects. For example, ESD is a shock you feel when you walk on a carpet, and then touch a metal door handle.

Protective bags

Pack all ESD-sensitive parts in metalized protective bags during shipping.

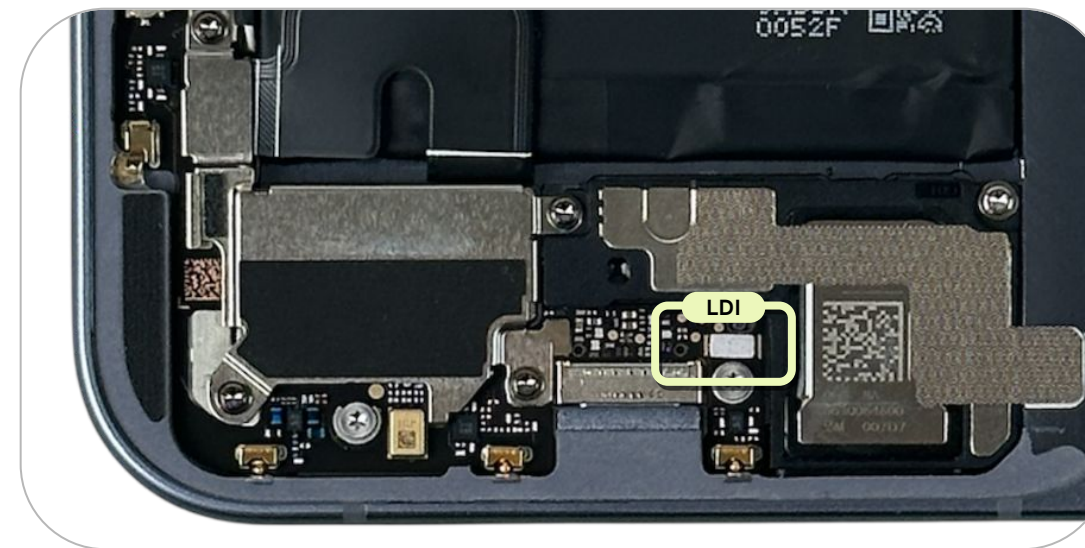

Avoid touching the pins

Use ESD-safe tools to handle components to avoid touching the pins.

Liquid damage indicators

Liquid Damage Indicators (LDI) are strips that change colors when a phone has been exposed to water or other liquids.

- Exposure to liquids could lead to the device malfunctioning, such as overheating or short circuits.
- There are **two LDIs** on this device.
- If either indicator has turned red, the device is considered to have been exposed to liquid.

On the logic board, near the charging port.

The SIM card tray on the flip enclosure is visible without disassembly of the device.

Turn the Pixel on and off

Turn the power on or off

- To turn on a device when it's powered off, press and hold the power button for a few seconds. [See where the power button is located.](#)
- To power off the phone:
 - Press and hold the power and volume up buttons for a few seconds. Then, tap **Power off** on screen.
 - For more information, see [Google Help page](#).

Tip: Before you turn on the phone, charge it. [Learn how to charge.](#)

Turn screen off and back on

- To turn the screen on and off when the phone is turned on, press the power button once.

Tip: On some Pixel phones, you could see the time and some other information even when the screen is off. Learn which Pixel phones and [how to turn **Always show time and info** off or on.](#)

Restart or reboot

1. On most phones, press the phone's Power button for about 30 seconds, or until the phone restarts.
2. On the screen, you might need to tap **Restart**.

Tools and fixtures

The use of Google-authorized tools and fixtures is strongly recommended to repair a device in a safe and effective manner.

Use caution

- We *don't* recommend that you perform repairs without the specified tools and fixtures.
- Improper use of tools and fixtures might result in injury to yourself, the user of the device or other third parties, along with the damage to the product, tools, fixtures, replacement parts, or other spare parts.

Replacement parts

Important notice about replacement parts

- The use of Google-authorized replacement parts is strongly recommended.
- Performance within product specifications can't be assured if Google-authorized replacement parts aren't used.

Use caution

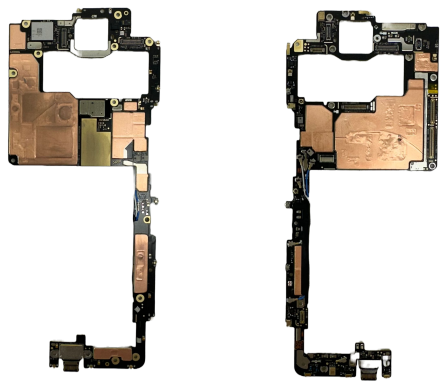

Use of replacement parts other than Google-authorized replacement parts, such as aftermarket batteries, might impact device safety, reliability, and performance.

Batt wall Kapton
G806-14390-01

A long, thin, blue Kapton tape with two small white circular marks at the ends.

Glossary

Glossary

Acronym or term	Definition
ESD	Electro Static Discharge The sudden flow of electricity through two electrically charged objects.
IPA	Isopropyl Alcohol Used to clean components and enclosures. Comes as pads or a solution.
FPC	Flexible Printed Circuit A type of low profile and flexible printed circuit.
OLED	Organic Light-Emitting Diode A type of flat panel display with an OLED to show images.
mmWave	Millimeter Wave The radio waves used to build a 5G network, to provide fast, reliable mobile data.
Sub6	Sub-6 GHz Refers to mid- and low-frequency bands under 6 GHz.
NG	Not Good. Usually refers to a condition that isn't acceptable.
SBOM	Service Bill of Materials

Glossary

Acronym or term	Definition
Display module	<p>The OLED, glass cover, and sometimes other components such as the fingerprint sensor.</p> <p>Also known as: Cover Glass (CG) Screen Display</p>
Logic board	<p>The main electronic component in the device with the processor, memory, storage, and often Wi-Fi and bluetooth components all soldered on.</p> <p>Also known as: MLB Main Logic Board Main Board PCBA</p>
Microphone	<p>The component used to capture audio to make a call, video, or dictate some notes.</p> <p>Also known as: Mic Mic 1 bracket</p>
Enclosure	<p>The housing that contains the buttons and provides protection for the logic board and other components.</p> <p>Also known as: Housing (HSG) Rear cover Back cover Bottom case Back glass (BG)</p>
LDI	<p>Liquid Damage Indicator</p> <p>An indicator that turns from white into another color, typically red, after contact with water.</p> <p>Also known as: Liquid damage indicator LDI</p>
FOF	<p>Fabric-Over-Foam</p>

Glossary

Acronym or term	Definition
Camera	Camera modules include the front camera and rear cameras. Also known as: CAM FCAM RCAM
Pressure sensitive adhesive	The adhesive that is used to bond the enclosure and display module, battery and enclosure, or other parts. Also known as: PSA
UDFPS	Under Display FingerPrint Sensor Also known as: Fingerprint sensor
TS	Temperature Sensor
Release liner	This is a tool used to transport sensitive parts, including adhesives. It needs to be removed during installation for the device to function as intended.
UW	Ultra Wide
LDAF	Laser Detect Auto Focus
NFC	Near Field Communication
IF	Intermediate Frequency
PF	Protective Film

Pixel 10 Pro Fold repair manual

User PF Repair

Inner display protective film

Inner display trim

Inner display protective film

The user ID PF is intended to provide additional protection to the inner display during use of the device.

Use caution

Use safety gloves when you handle damaged displays as splinters during removal could cause injury.

Apply protective film to broken glass before removal.

Review all safety precautions before you begin work.

Prerequisites

Before you begin a repair, ensure to **power off** the device and disconnect any charging cables.

Tools

Universal base plate 12 mm

Universal holder #2

Universal holder limiting block #2

Universal press plate 12 mm

Universal scraper-large

Pixel 10 Pro Fold ID PF or trim supporting rubber

User PF
G806-14356-99

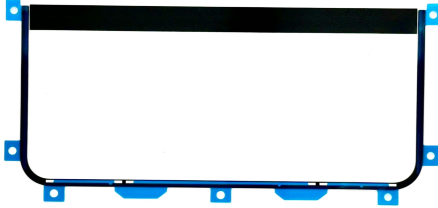

A rectangular, light-colored protective film with a thin green border on the left side.

Guide sticker
G806-13134-00

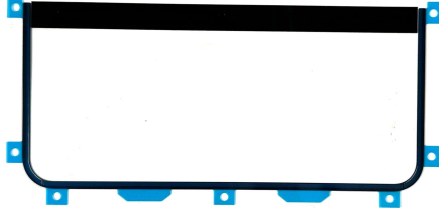

A small, dark blue, arrow-shaped sticker pointing to the right.

Trim base
G730-09903-00

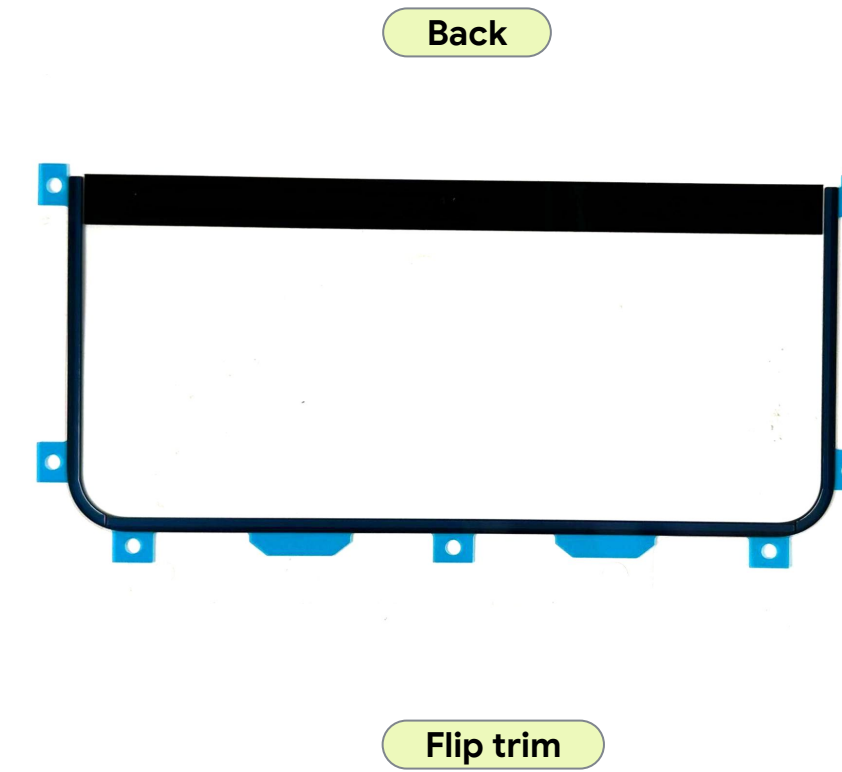

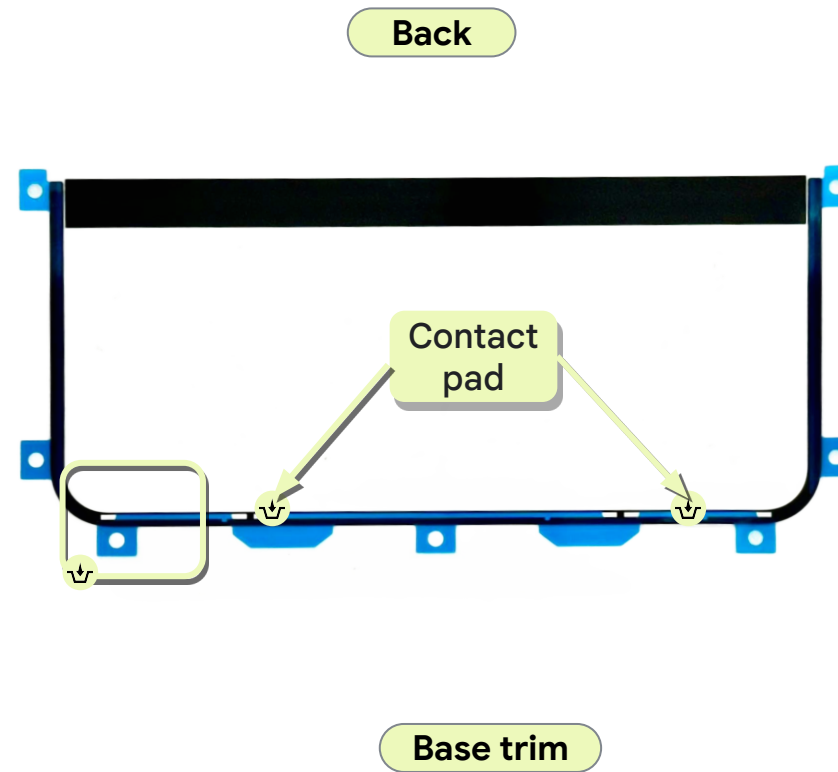

A black rectangular frame with blue square markers at the corners and along the bottom edge.

Trim flip
G730-09911-00

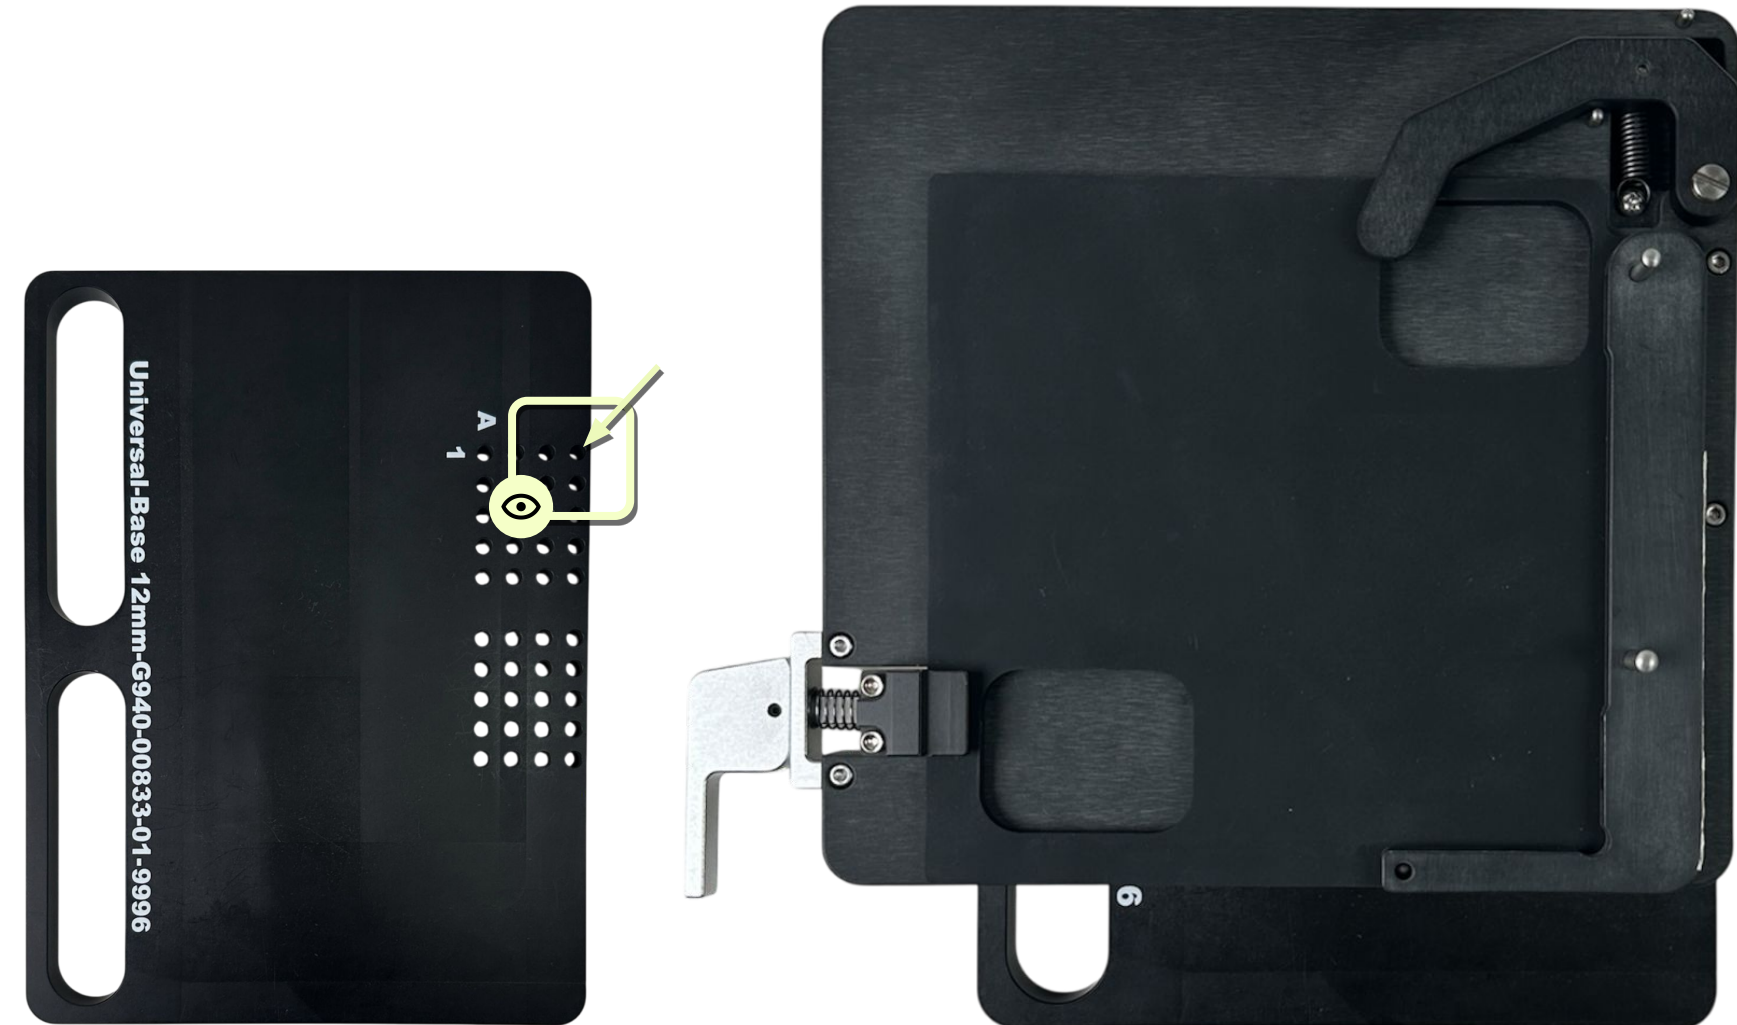

A black rectangular frame with blue square markers at the corners and along the bottom edge, similar to the trim base but with a different internal structure.

Trim difference

Prepare usage

- Place the **universal ID PF or trim supporting rubber** on the **universal holder #2**, and place the **universal holder limiting block #2** on top.
- Place the **fixture** in position **D1** on the **universal base**.

Remove the base and flip trims

- Make sure that the device is powered off before you proceed.
- Place the device in the **universal holder #2** with the inner display facing upward.
- Use a **spudger** and carefully lift the ends of both the **base** and **flip trim**, starting near the folding **hinge**.
- Remove the **flip trim** with your **hand**, and remove the **base trim** with your **hand**.
- Use a **spudger** to remove any adhesive residue from the **enclosure**.

Remove the user PF

- There are two **notched cutouts** on the upper and lower left of the **user PF**, as shown in **Fig 1**. Insert the **guide sticker liner** into one of them, as shown in **Fig 2**.
- Insert the plastic deeper to separate the **user PF** from the **ID**.
- Slowly tear off the user PF by **hand** and hold down the **ID**. Move the hand along to avoid the damage to the screen, as shown in **Fig 3**.

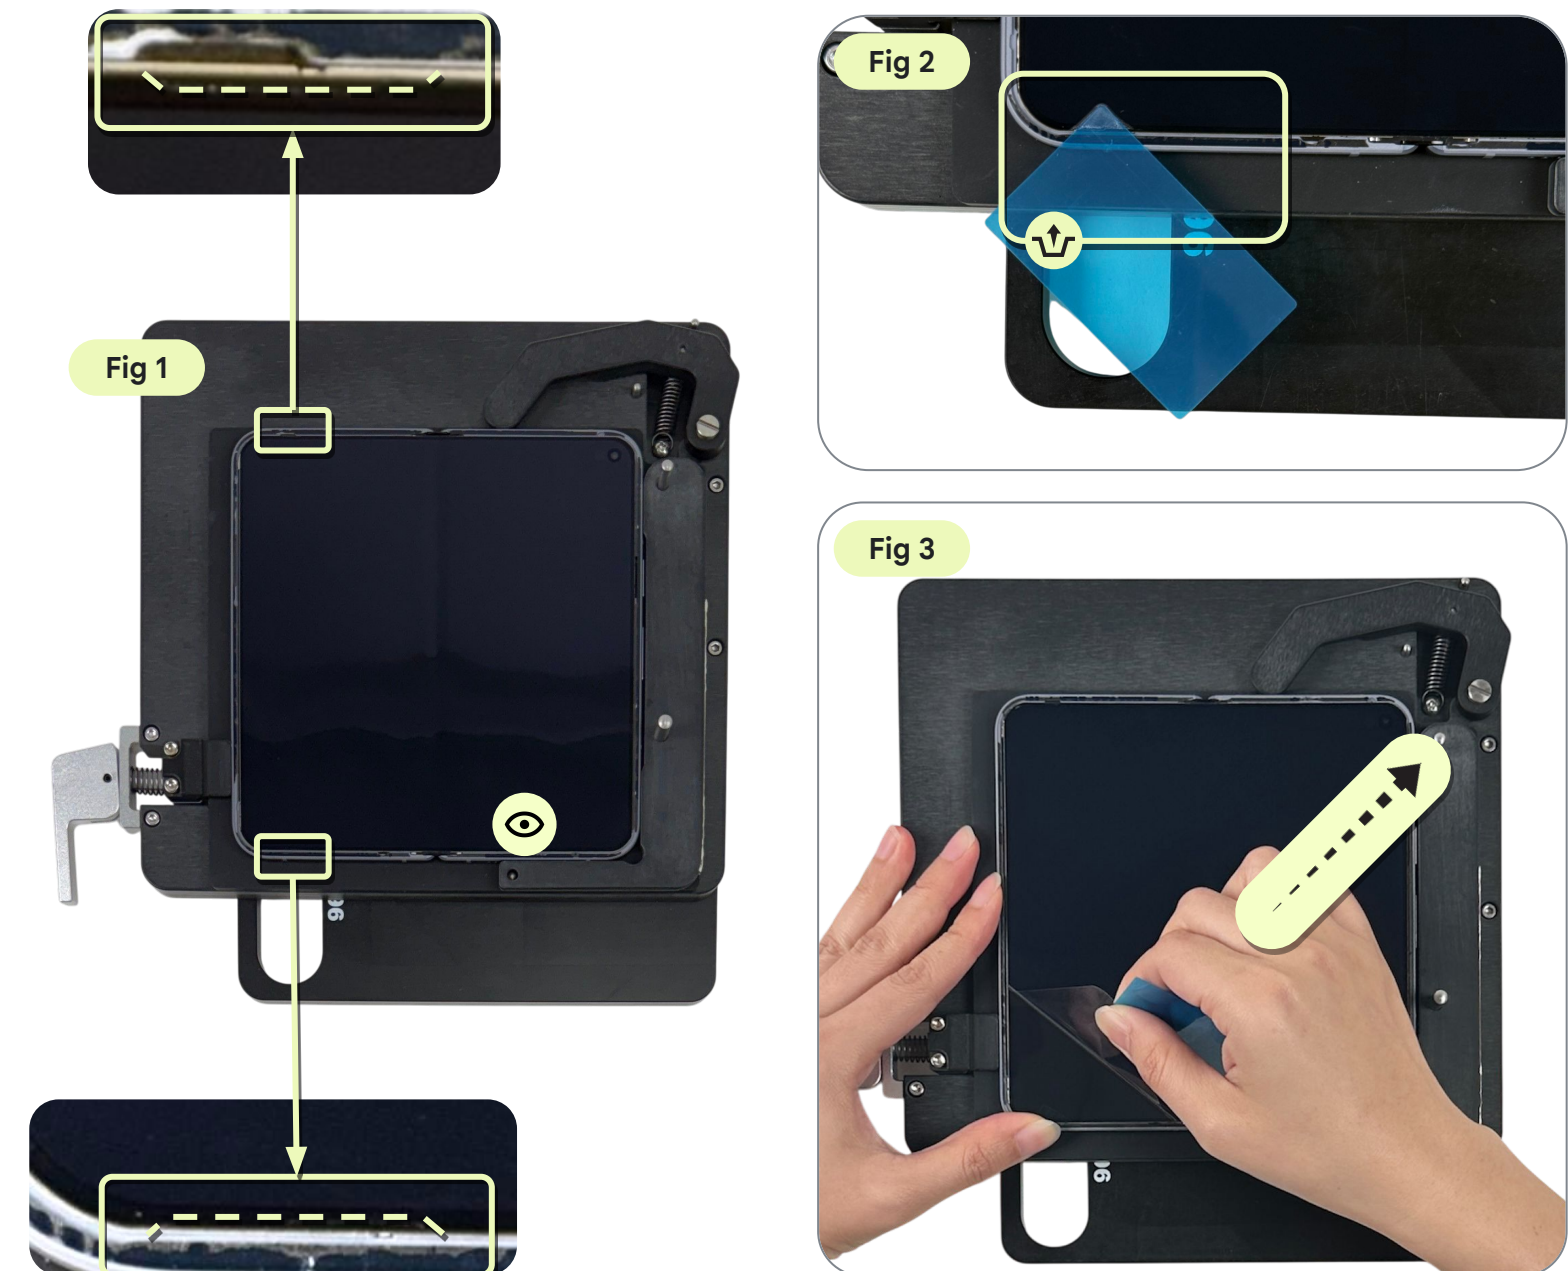

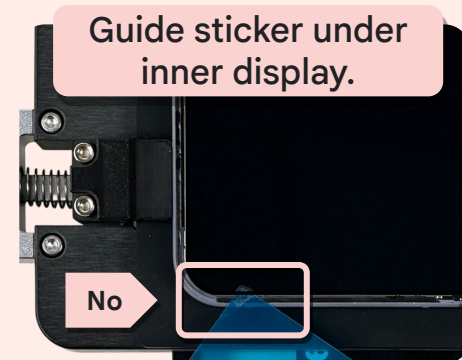

Note

Don't wear gloves when you handle the user PF.
Use a magnifying glass if needed.

Use caution

Peel off the **user PF** from the **notched cutouts** on the upper or lower left of the user PF to avoid the damage the **inner display**.

Clean the display

- Use **IPA** and a **dust-free cloth** to clean the screen of dust and residue.
- Use a dust cleaning tool and **screen protector accessories** to remove all dust from the display.

Use caution

Make sure that the environment is clean for this process.

Remove the release liners

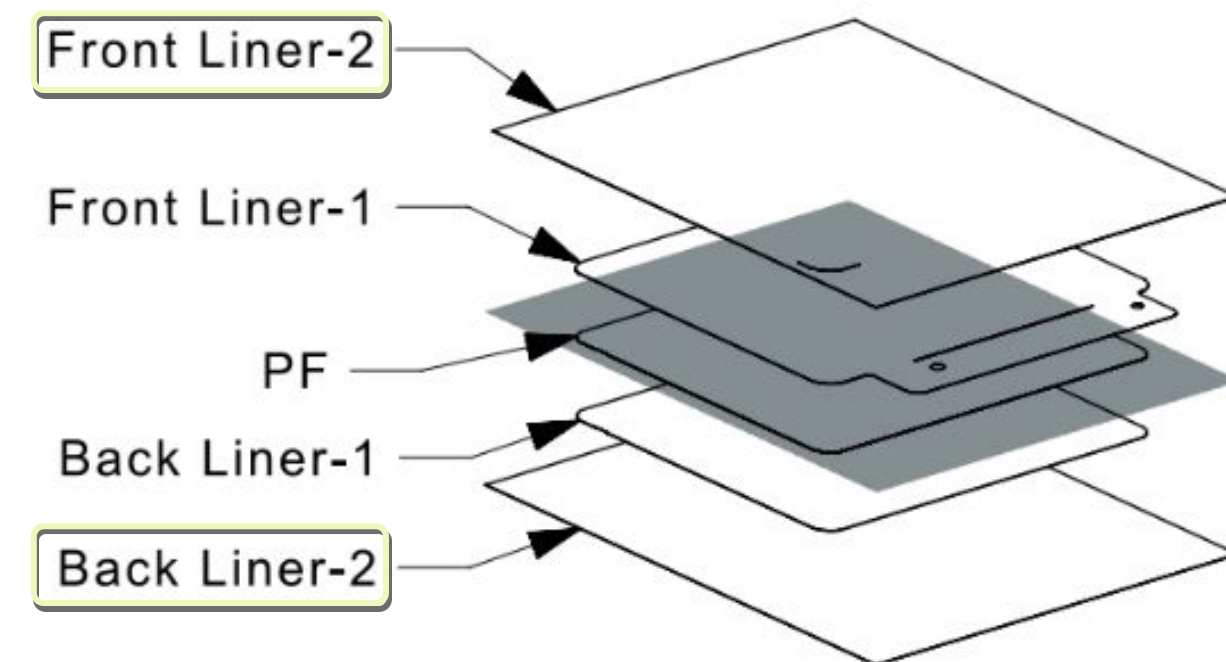

Slowly peel off the **front liner 2** and the **back liner 2** from the **user PF**.

Part: G806-14356-99 (user PF)

Use caution

Make sure that the environment is clean for this process.

Remove the back liner-1

- Gently peel the layered structure between **front liner-1**, **PF**, and **back liner-1** to identify the **back liner-1** side, as shown in **Fig 1**.
- Insert a **guide sticker** from the corner at a 45 degrees angle to peel the **black liner 1**, as shown in **Fig 2**.

Part: G806-13134-00 (guide sticker)

⚠ Use caution

Make sure that only one single layer, which is the back liner-1 is removed from the user PF.

Make sure that the environment is clean for this process.

Fig 1

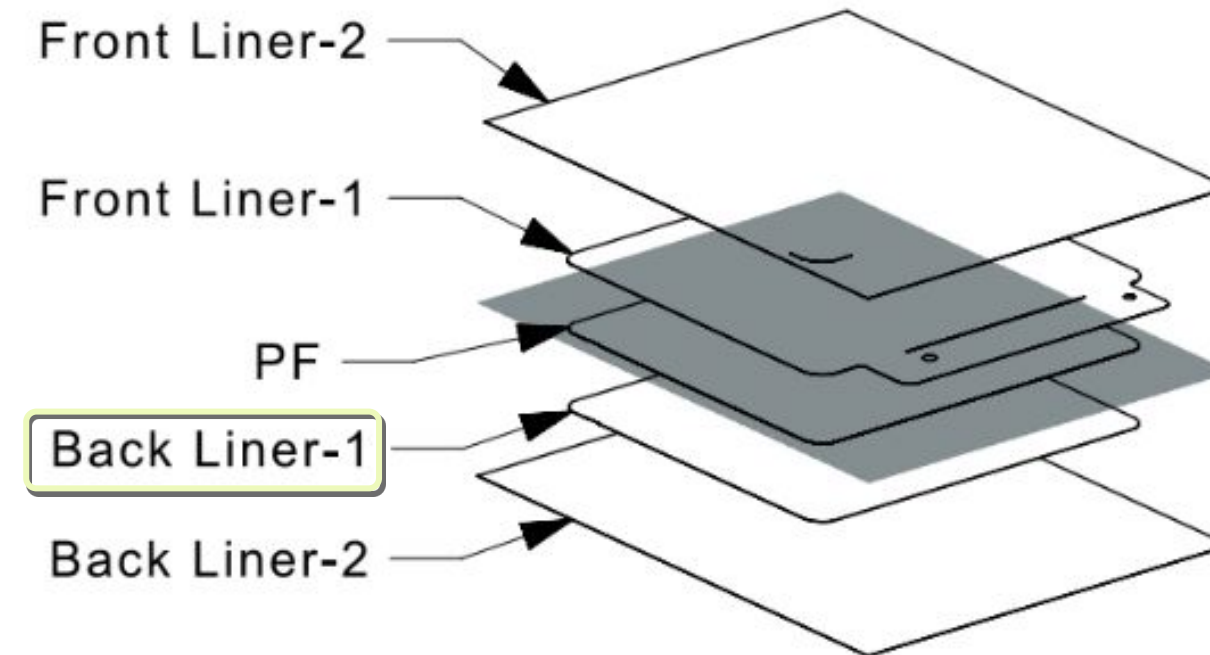

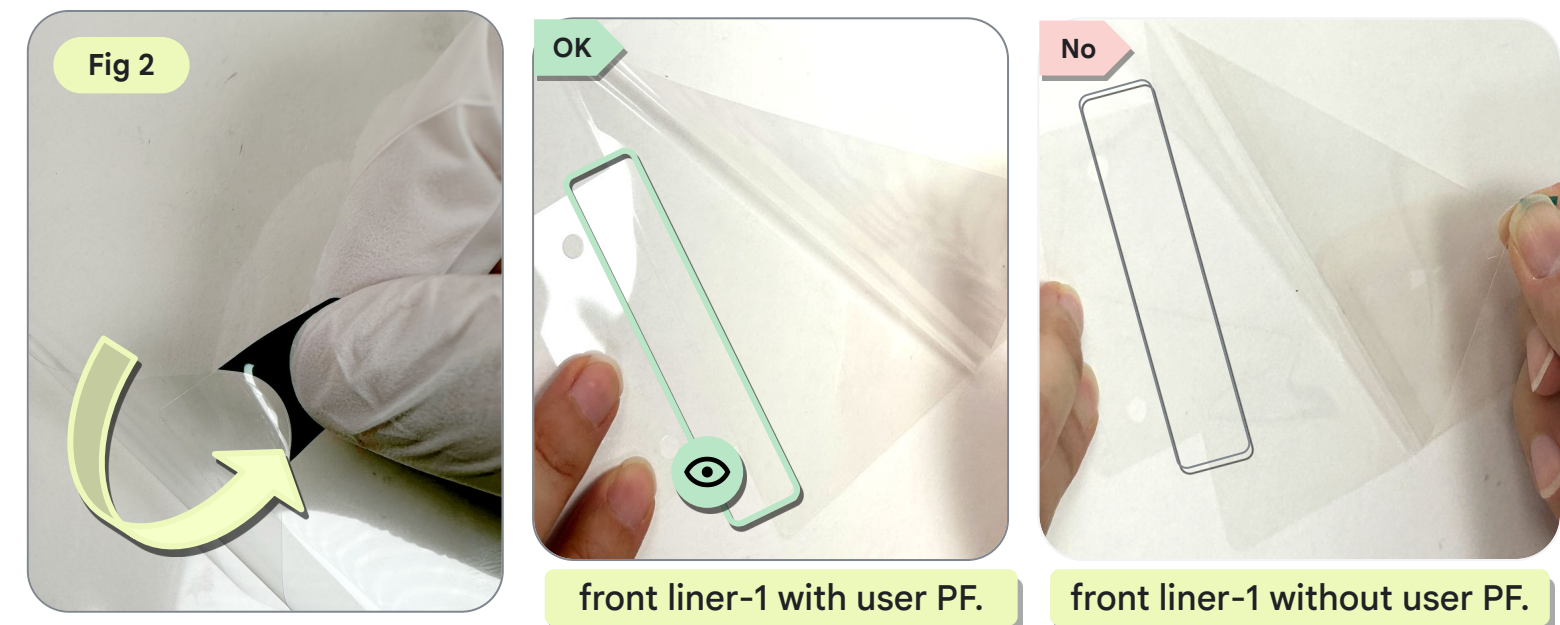

Fig 2

Align the PF with fixture

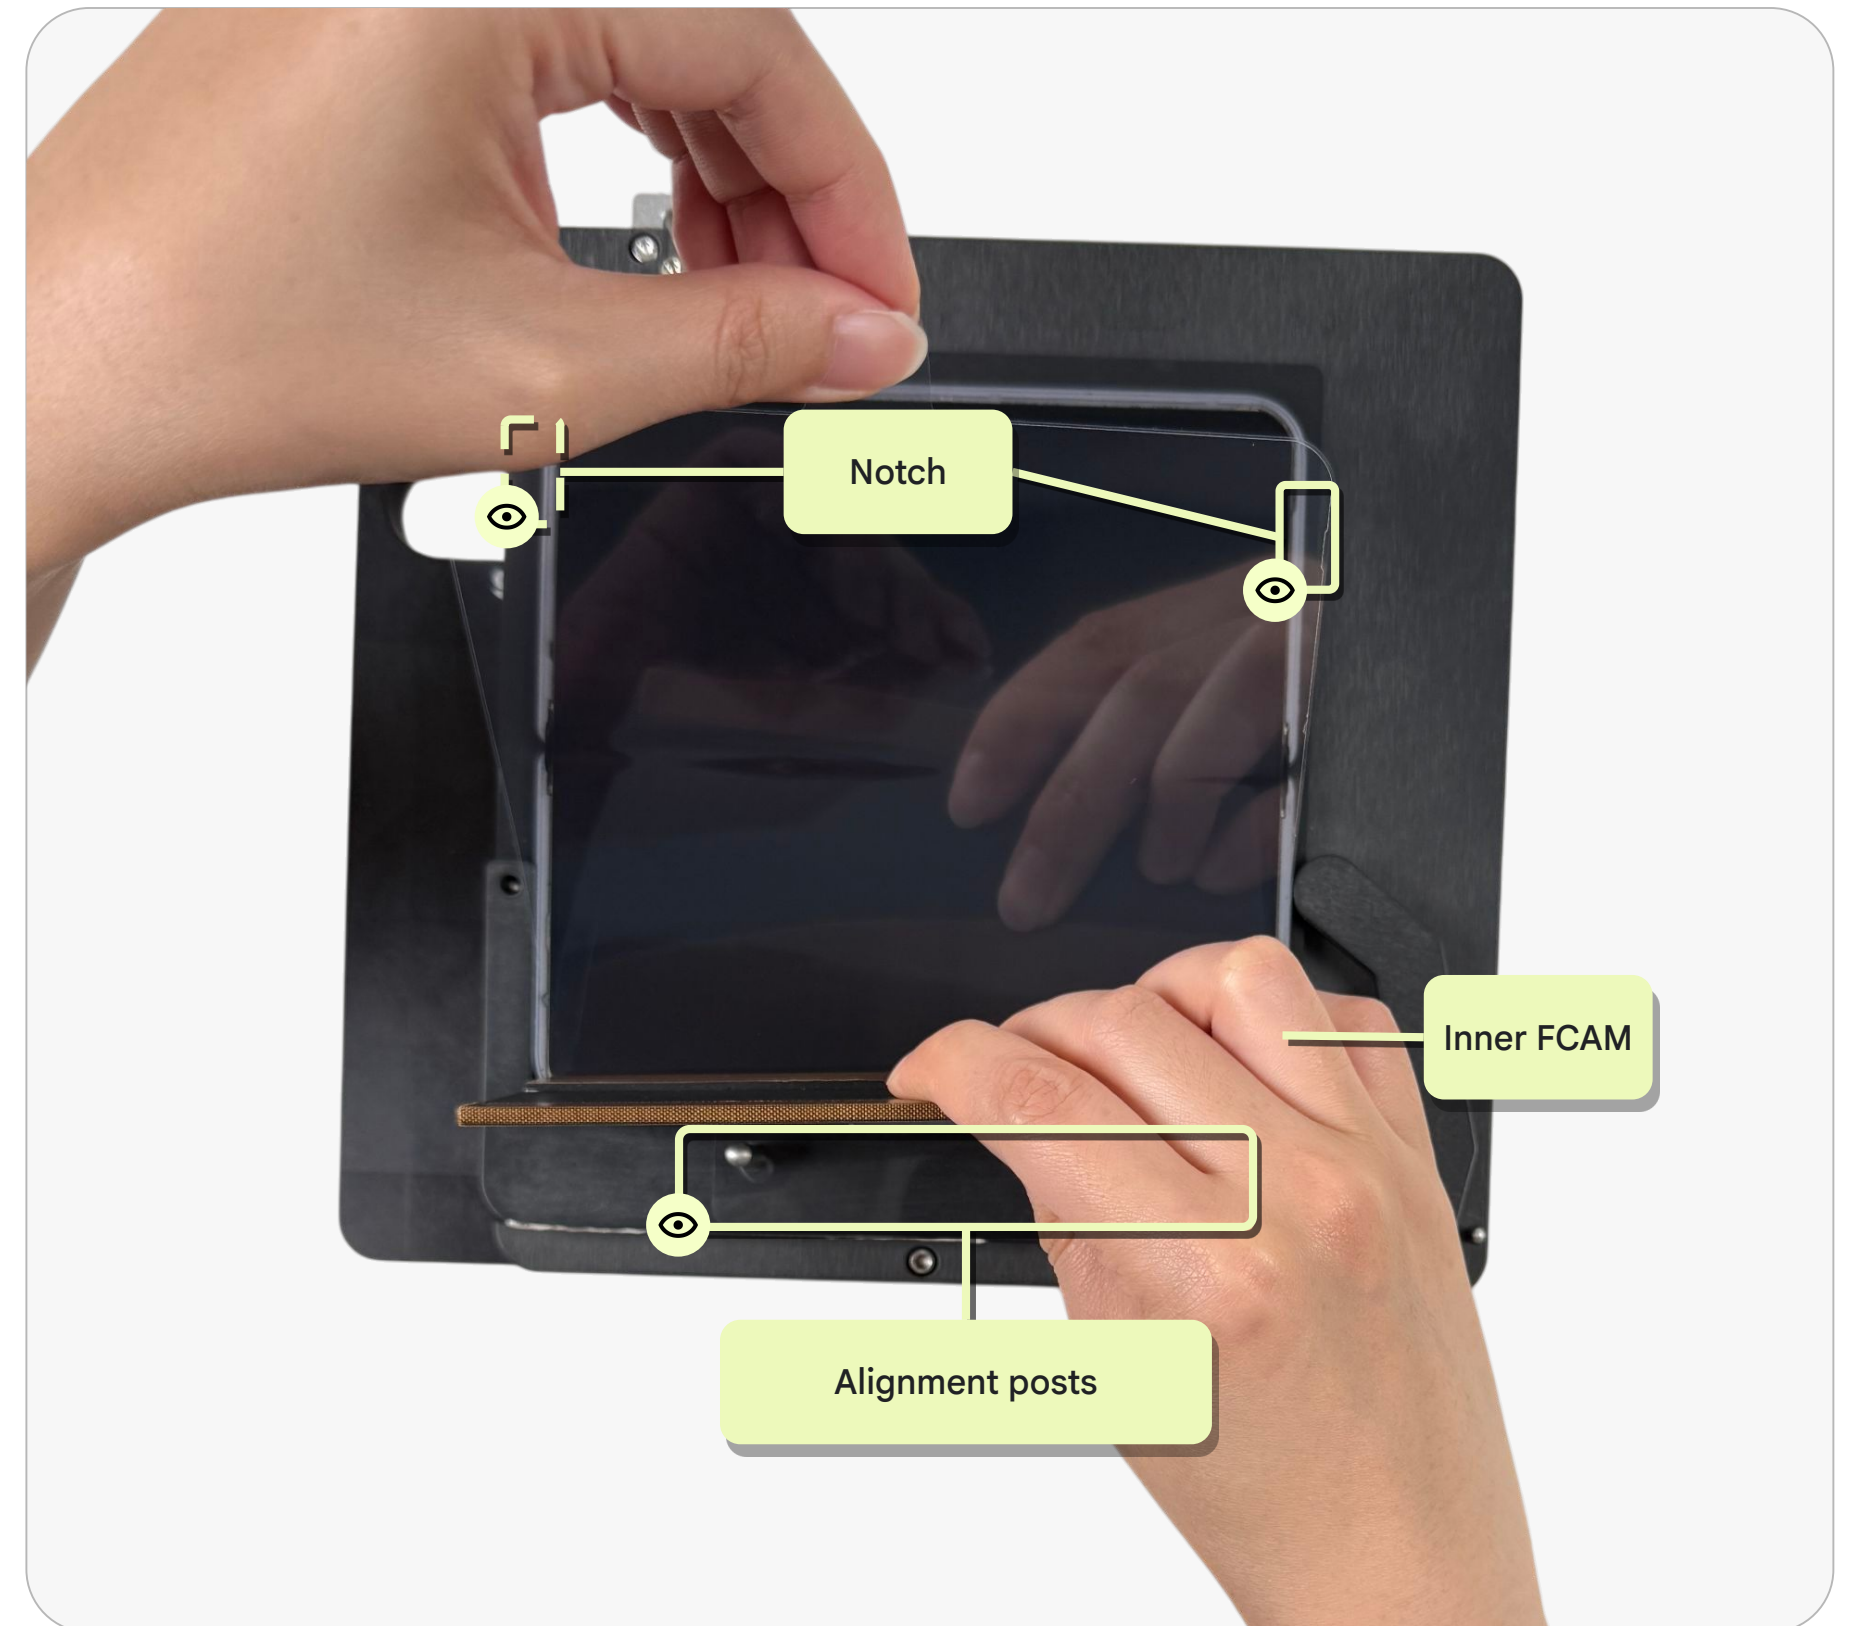

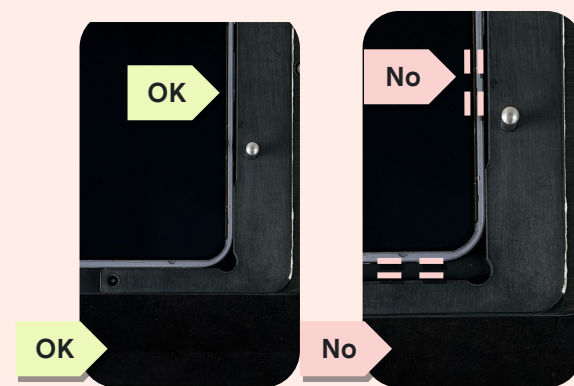

- Locate the two **Universal holder #2** alignment posts near the **inner display FCAM**.
- Place the guide plastic of the **user PF** through the posts, and ensure that there are no creases on the plastic around the posts.

Part: G806-14356-99 (user PF)

⚠ Use caution

Make sure that the device leans on the L-shape limiting block without any gap.

Make sure that the environment is clean for this process.

Apply the PF

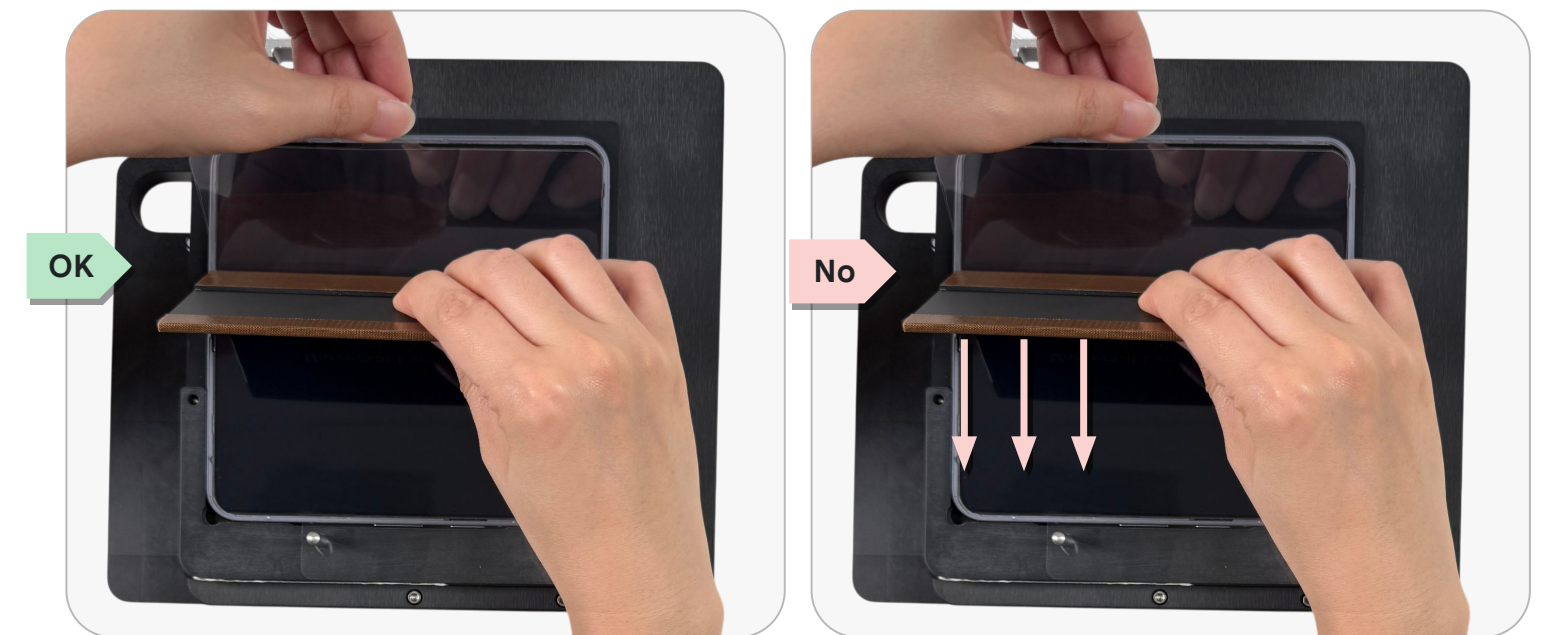

- Gently angle the **user PF** at a 75 degrees angle to the inner display with one **hand**.
- Align the **universal scraper-large** to the screen with the other hand.
- Starting from the edge, slowly apply the protective film onto the screen with the **universal scraper-large**. Move forward with moderate pressure.

Part: G806-14356-99 (user PF)

Use caution

Make sure that the environment is clean for this process.

Avoid back-and-forth movements.

Apply the PF (continued)

- Glide the **universal scraper-large** on the **user PF** to wipe bubbles towards the edges of the PF, as shown in **Fig 1**.
- Use a **dust-free cloth** to gently press the hinge area and the four edges to ensure that the **user PF** adheres properly, as shown in **Fig 2**.

Part: G806-14356-99 (user PF)

Use caution

Make sure that the environment is clean for this process.

Remove the liner

After you attach the **user PF** to the **inner display**, wait for 5 minutes. Then, carefully peel off the front liner-1, and ensure that the PF stays attached.

Part: G806-14356-99 (user PF)

Note

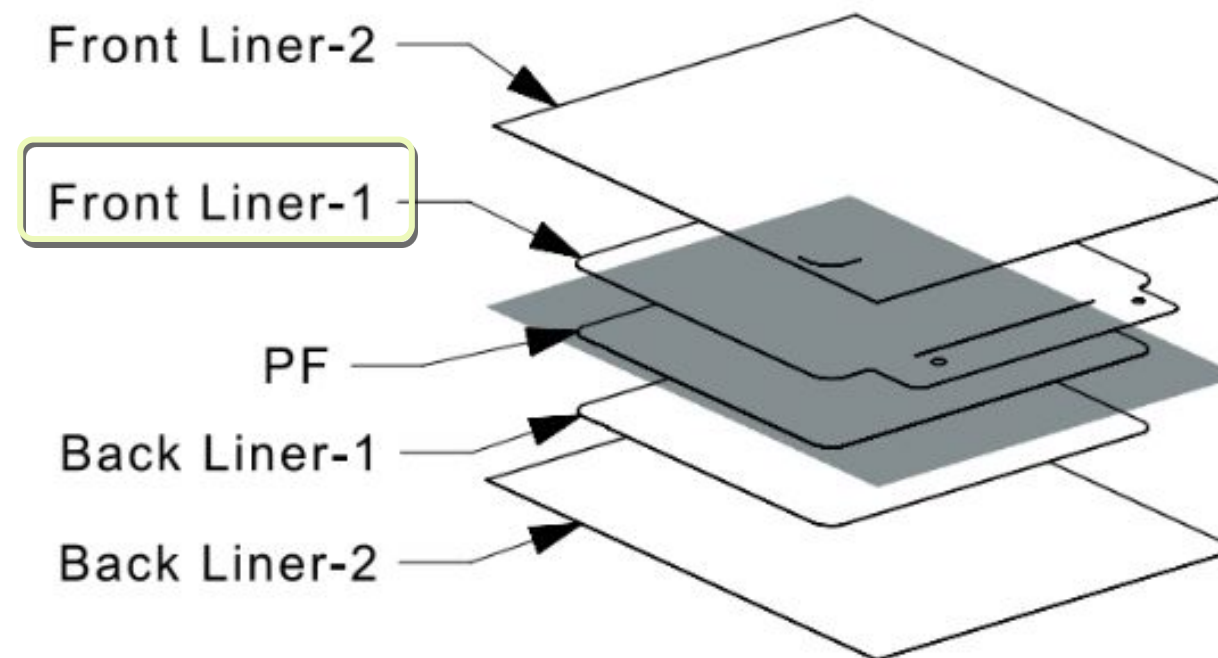

Wait for 5 minutes before you remove the front liner-1.

Use caution

The PF is prone to scratches after the front liner-1 is removed.

Don't use the universal scraper, other tools, or try to remove any blemishes after you remove the liner.

Keep the device unfolded

Keep the device unfolded for at least **an hour** after PF application.

Use caution

Avoid to fold or repair it during this time.

Don't use scrapers, dust-free cloth, or tools on the screen during the dwell period.

Inner display trim

Solution 1: use alignment fixture

Solution 1: use alignment fixture

Remove the base trim liner

- Slowly peel off the outer liner from the **base trim**, and move your other hand along.
- Use **ESD tweezers** to remove the trim and carefully grab the first blue release liner. Repeat for the second and third blue release liners.

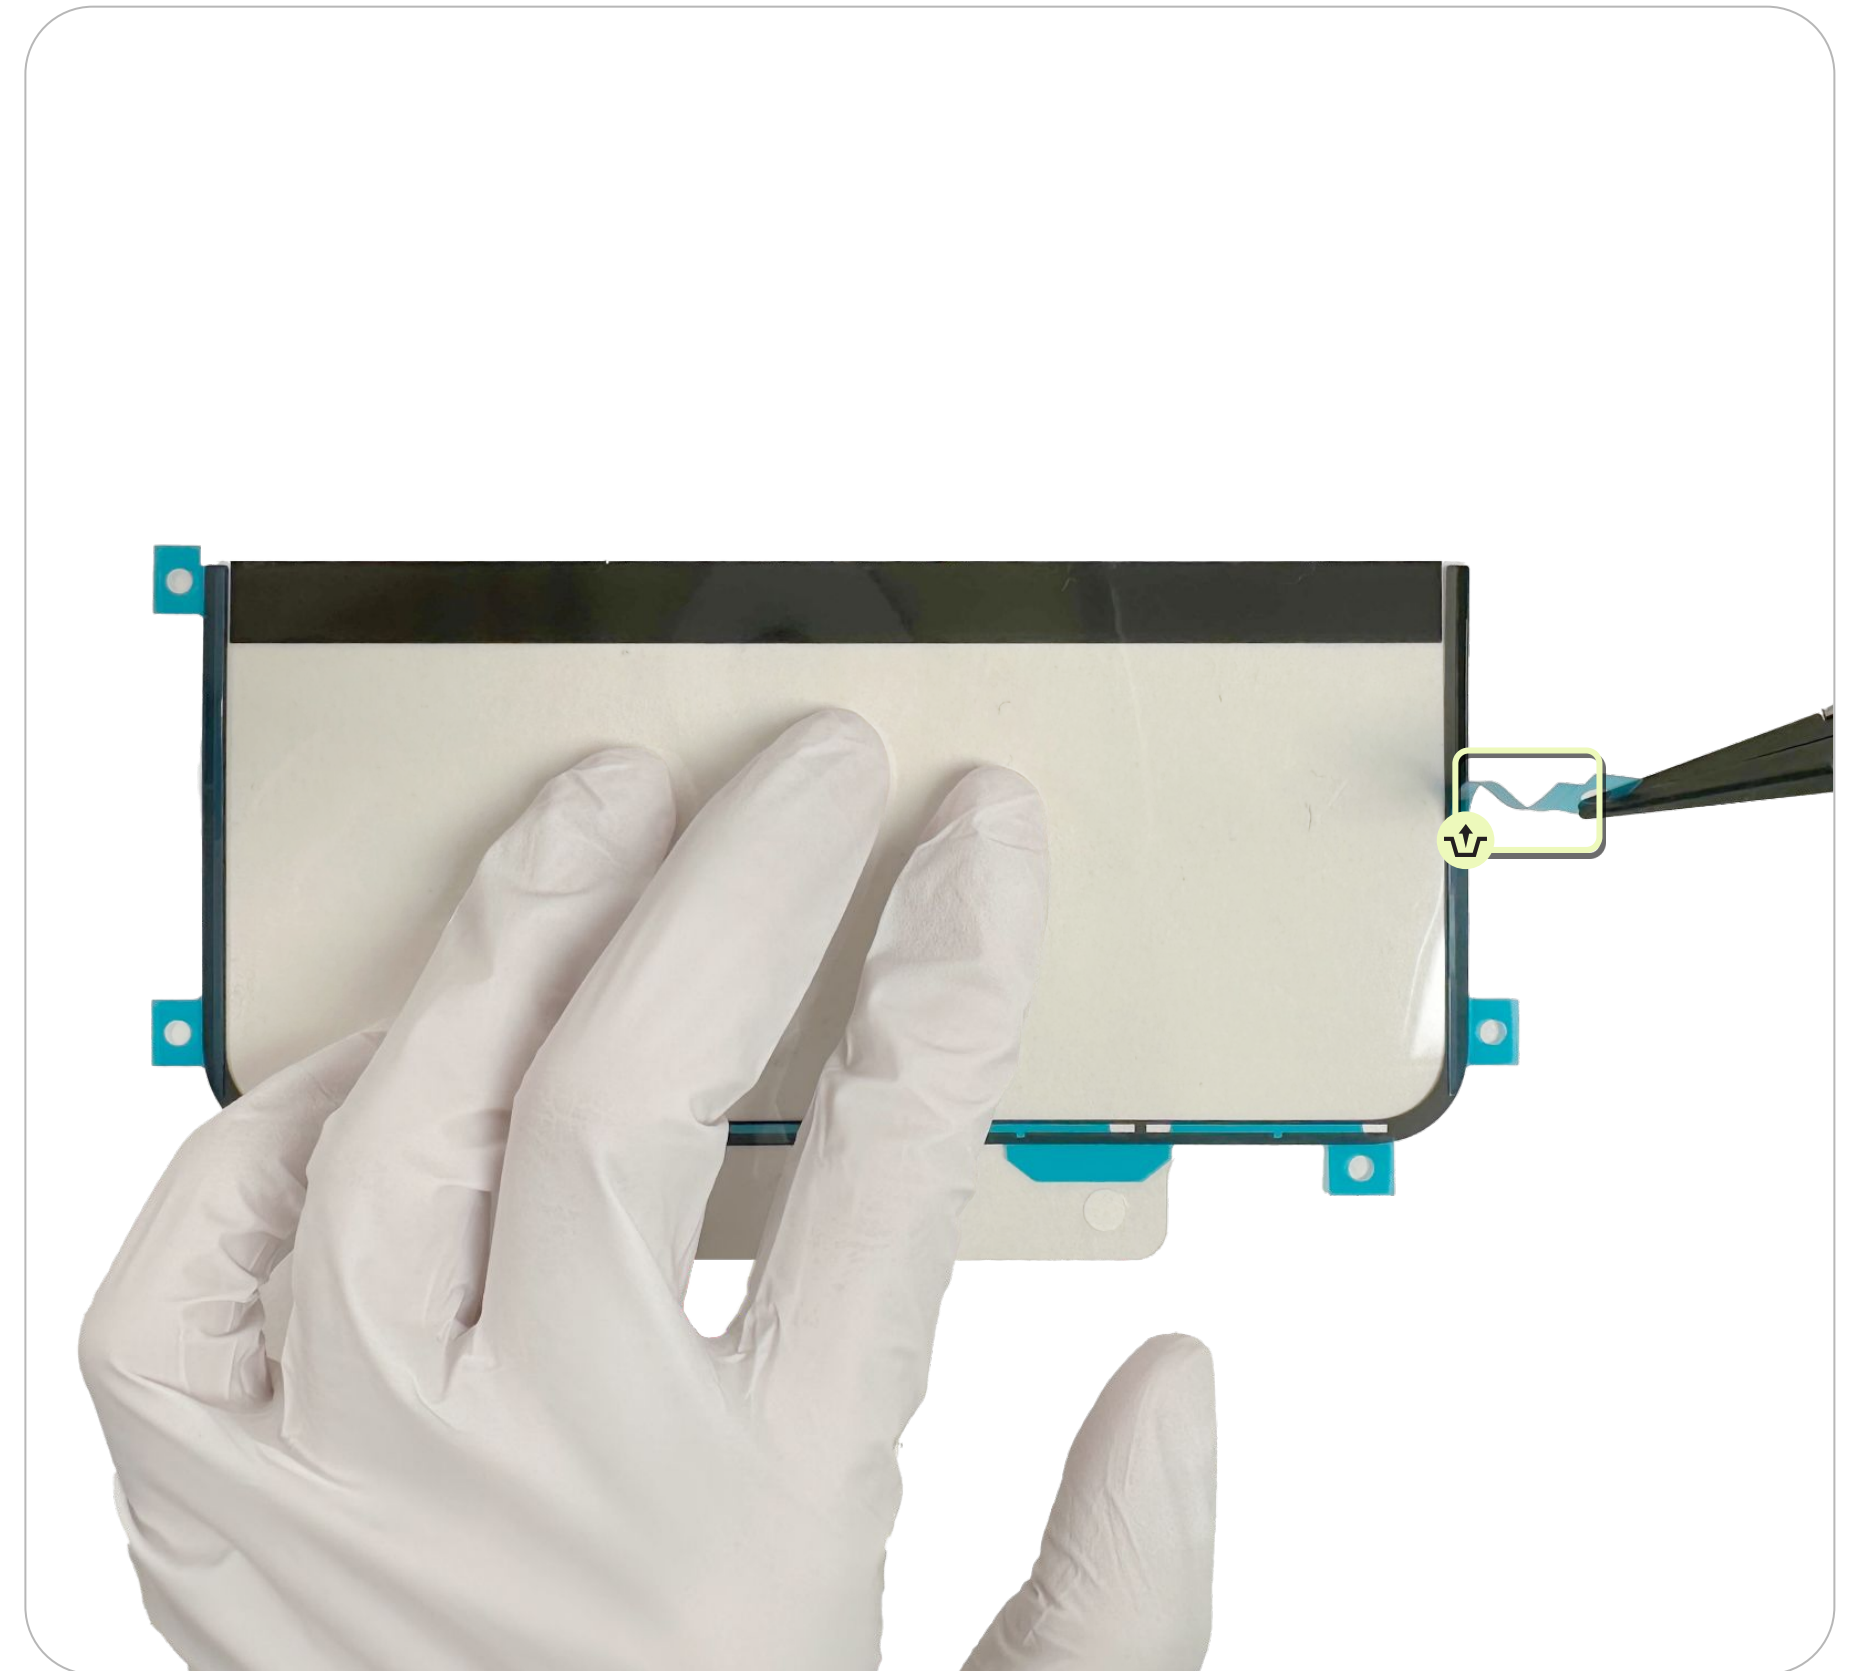

Part: G730-09903-00 (trim base)

Use caution

Make sure that the environment is clean for this process.

Be careful not to touch the trim or blue liner.

Solution 1: use alignment fixture

Place the base trim

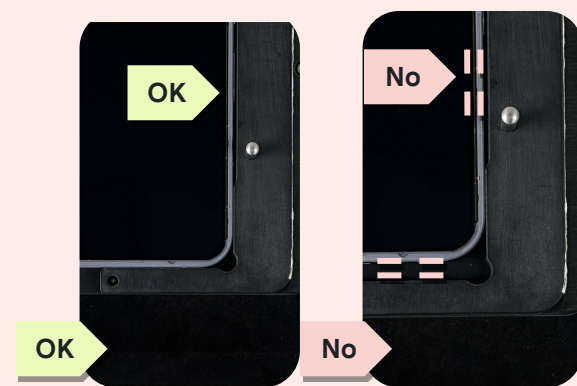

Place the guide plastic of the **base trim** through the **universal holder #2** alignment posts, and ensure that there are no creases on the plastic around the posts.

Use caution

Make sure that the device leans the L-shape limiting block without any gap.

Make sure that the environment is clean for this process.

Solution 1: use alignment fixture

Apply the base trim

- Allow the **base trim** to adhere naturally.
- Press the edges near the hinge on both sides.
- Push outward to ensure that the trim is in the groove.

Use caution

Make sure that the environment is clean for this process.

Solution 1: use alignment fixture

Remove the flip trim liner

- Slowly peel off the outer liner from the **flip trim**, and move your other hand along.
- Use **ESD tweezers** to remove the trim and carefully grab the first blue release liner. Repeat for the second and third blue release liners.

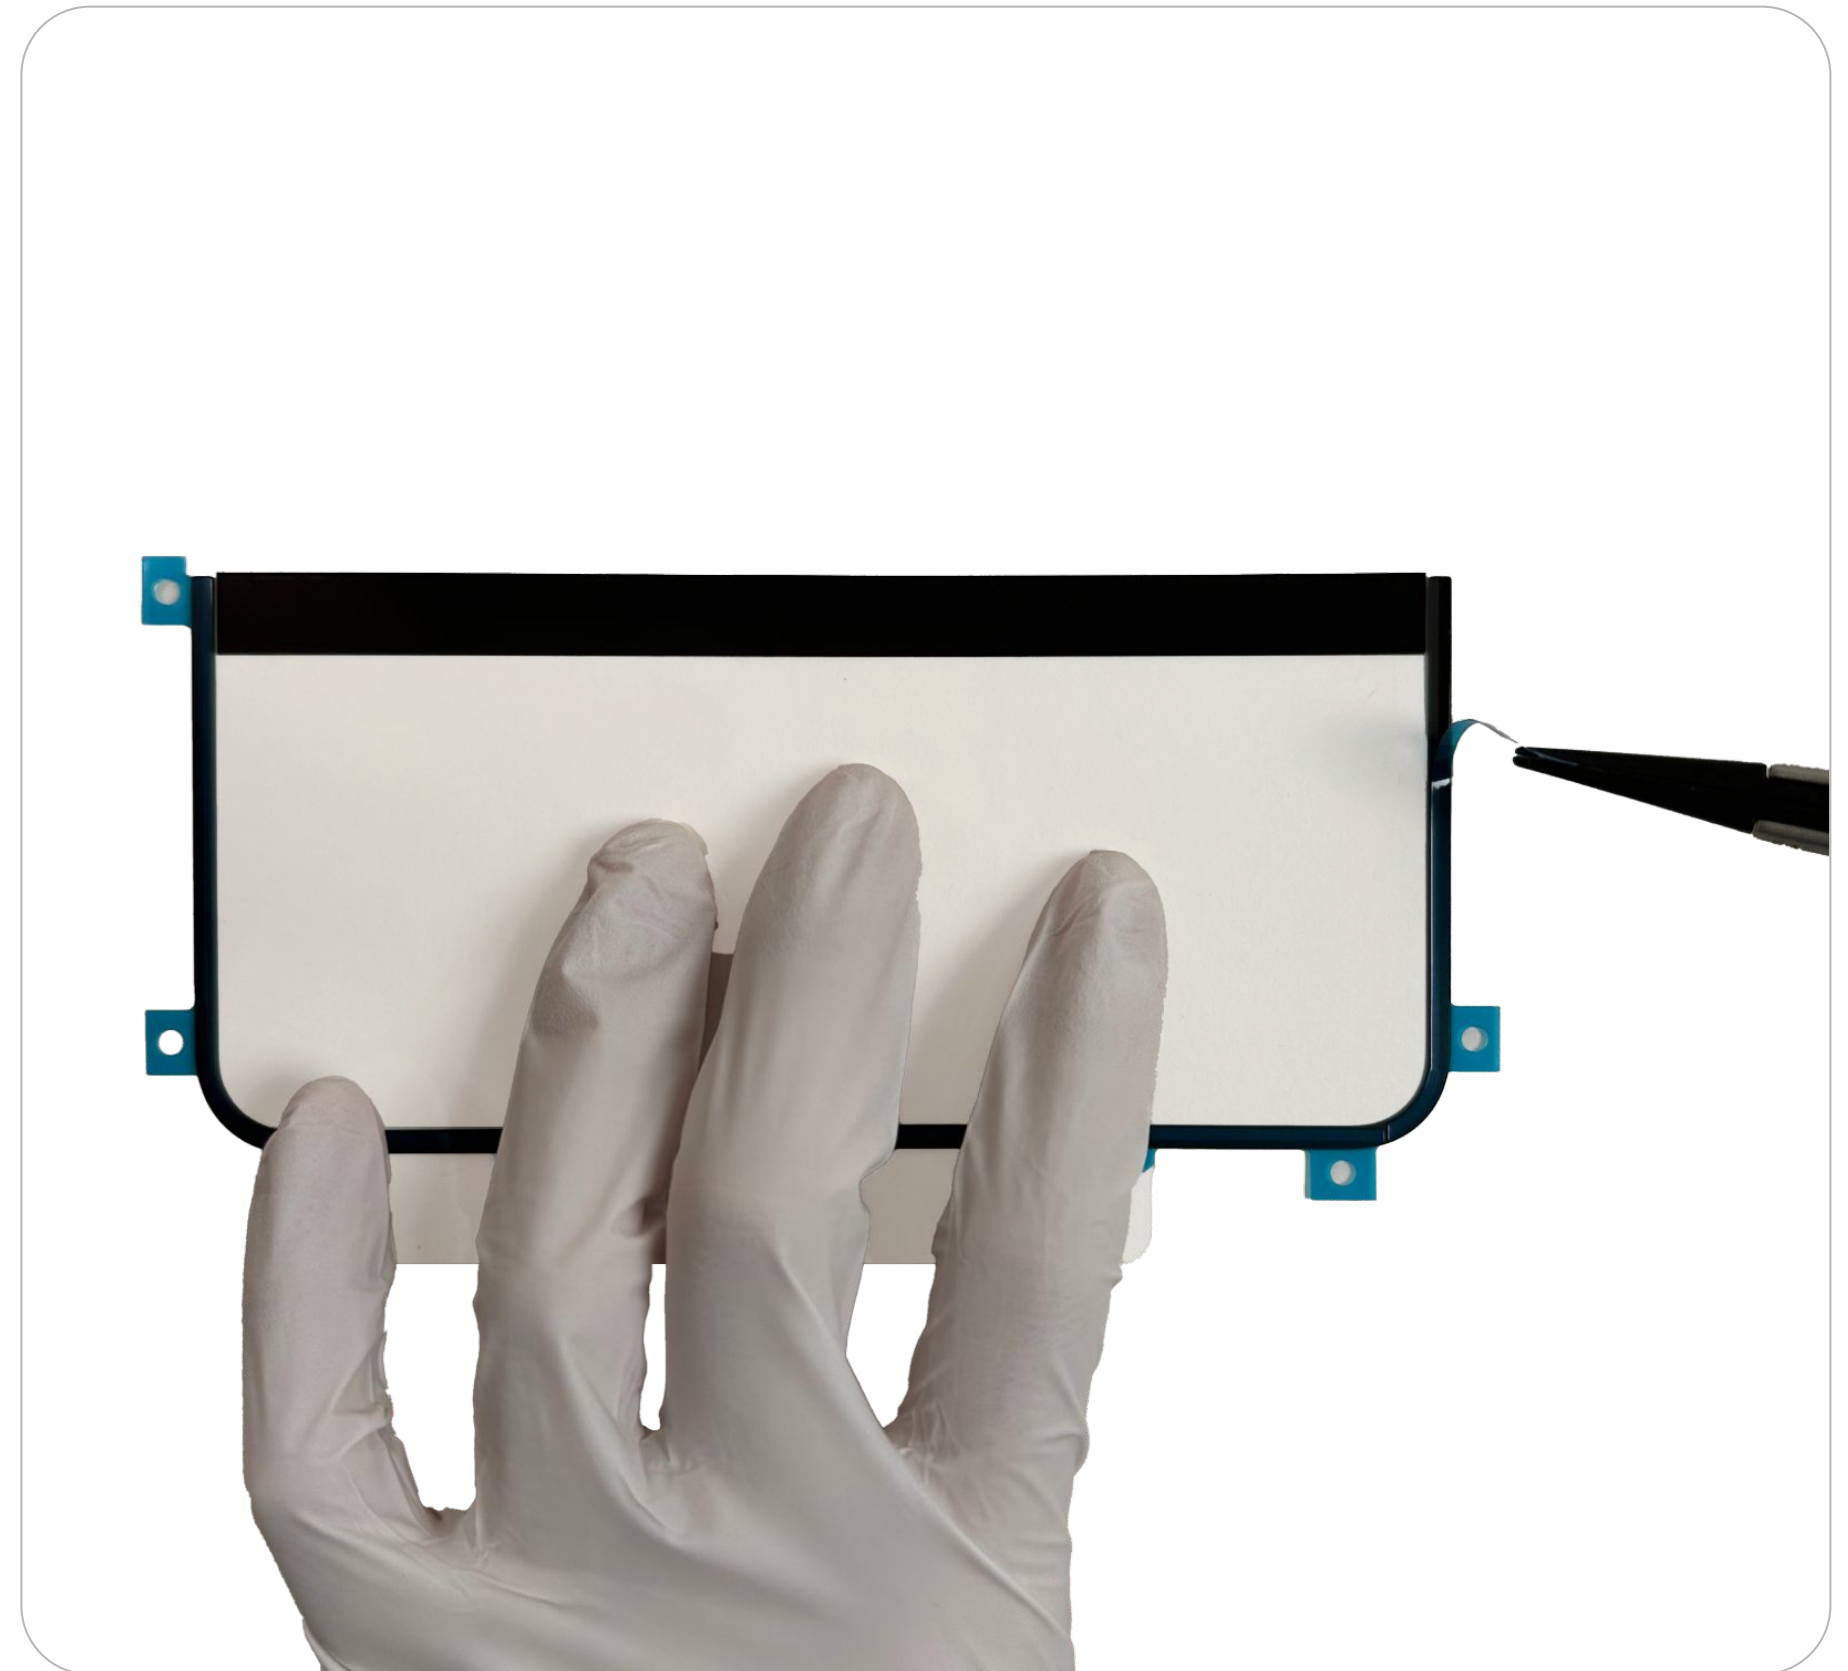

Part: G730-09911-00 (trim flip)

Use caution

Make sure that the environment is clean for this process.

Be careful not to touch the trim or blue liner.

Solution 1: use alignment fixture

Place the flip trim

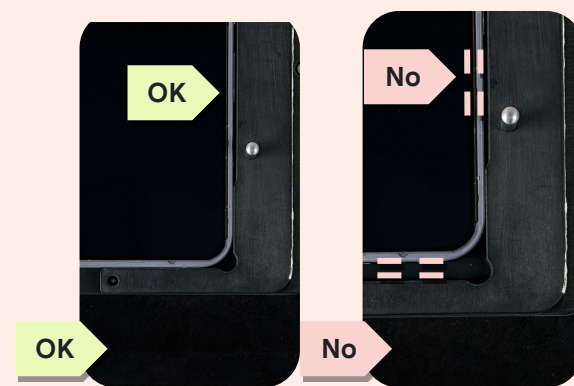

- Remove the device from the fixture, rotate 180 degrees, and place it back down on the fixture.
- Place the guide plastic of the **flip trim** through the **universal holder #2** alignment posts, and ensure that there are no creases on the plastic around the posts.

Use caution

Make sure that the device leans the L-shape limiting block without any gap.

Make sure that the environment is clean for this process.

Solution 1: use alignment fixture

Apply the flip trim

- Allow the **flip trim** to adhere naturally.
- Press the edges near the hinge on both sides.
- Push outward to ensure that the trim is in the groove.

Use caution

Make sure that the environment is clean for this process.

Solution 1: use alignment fixture

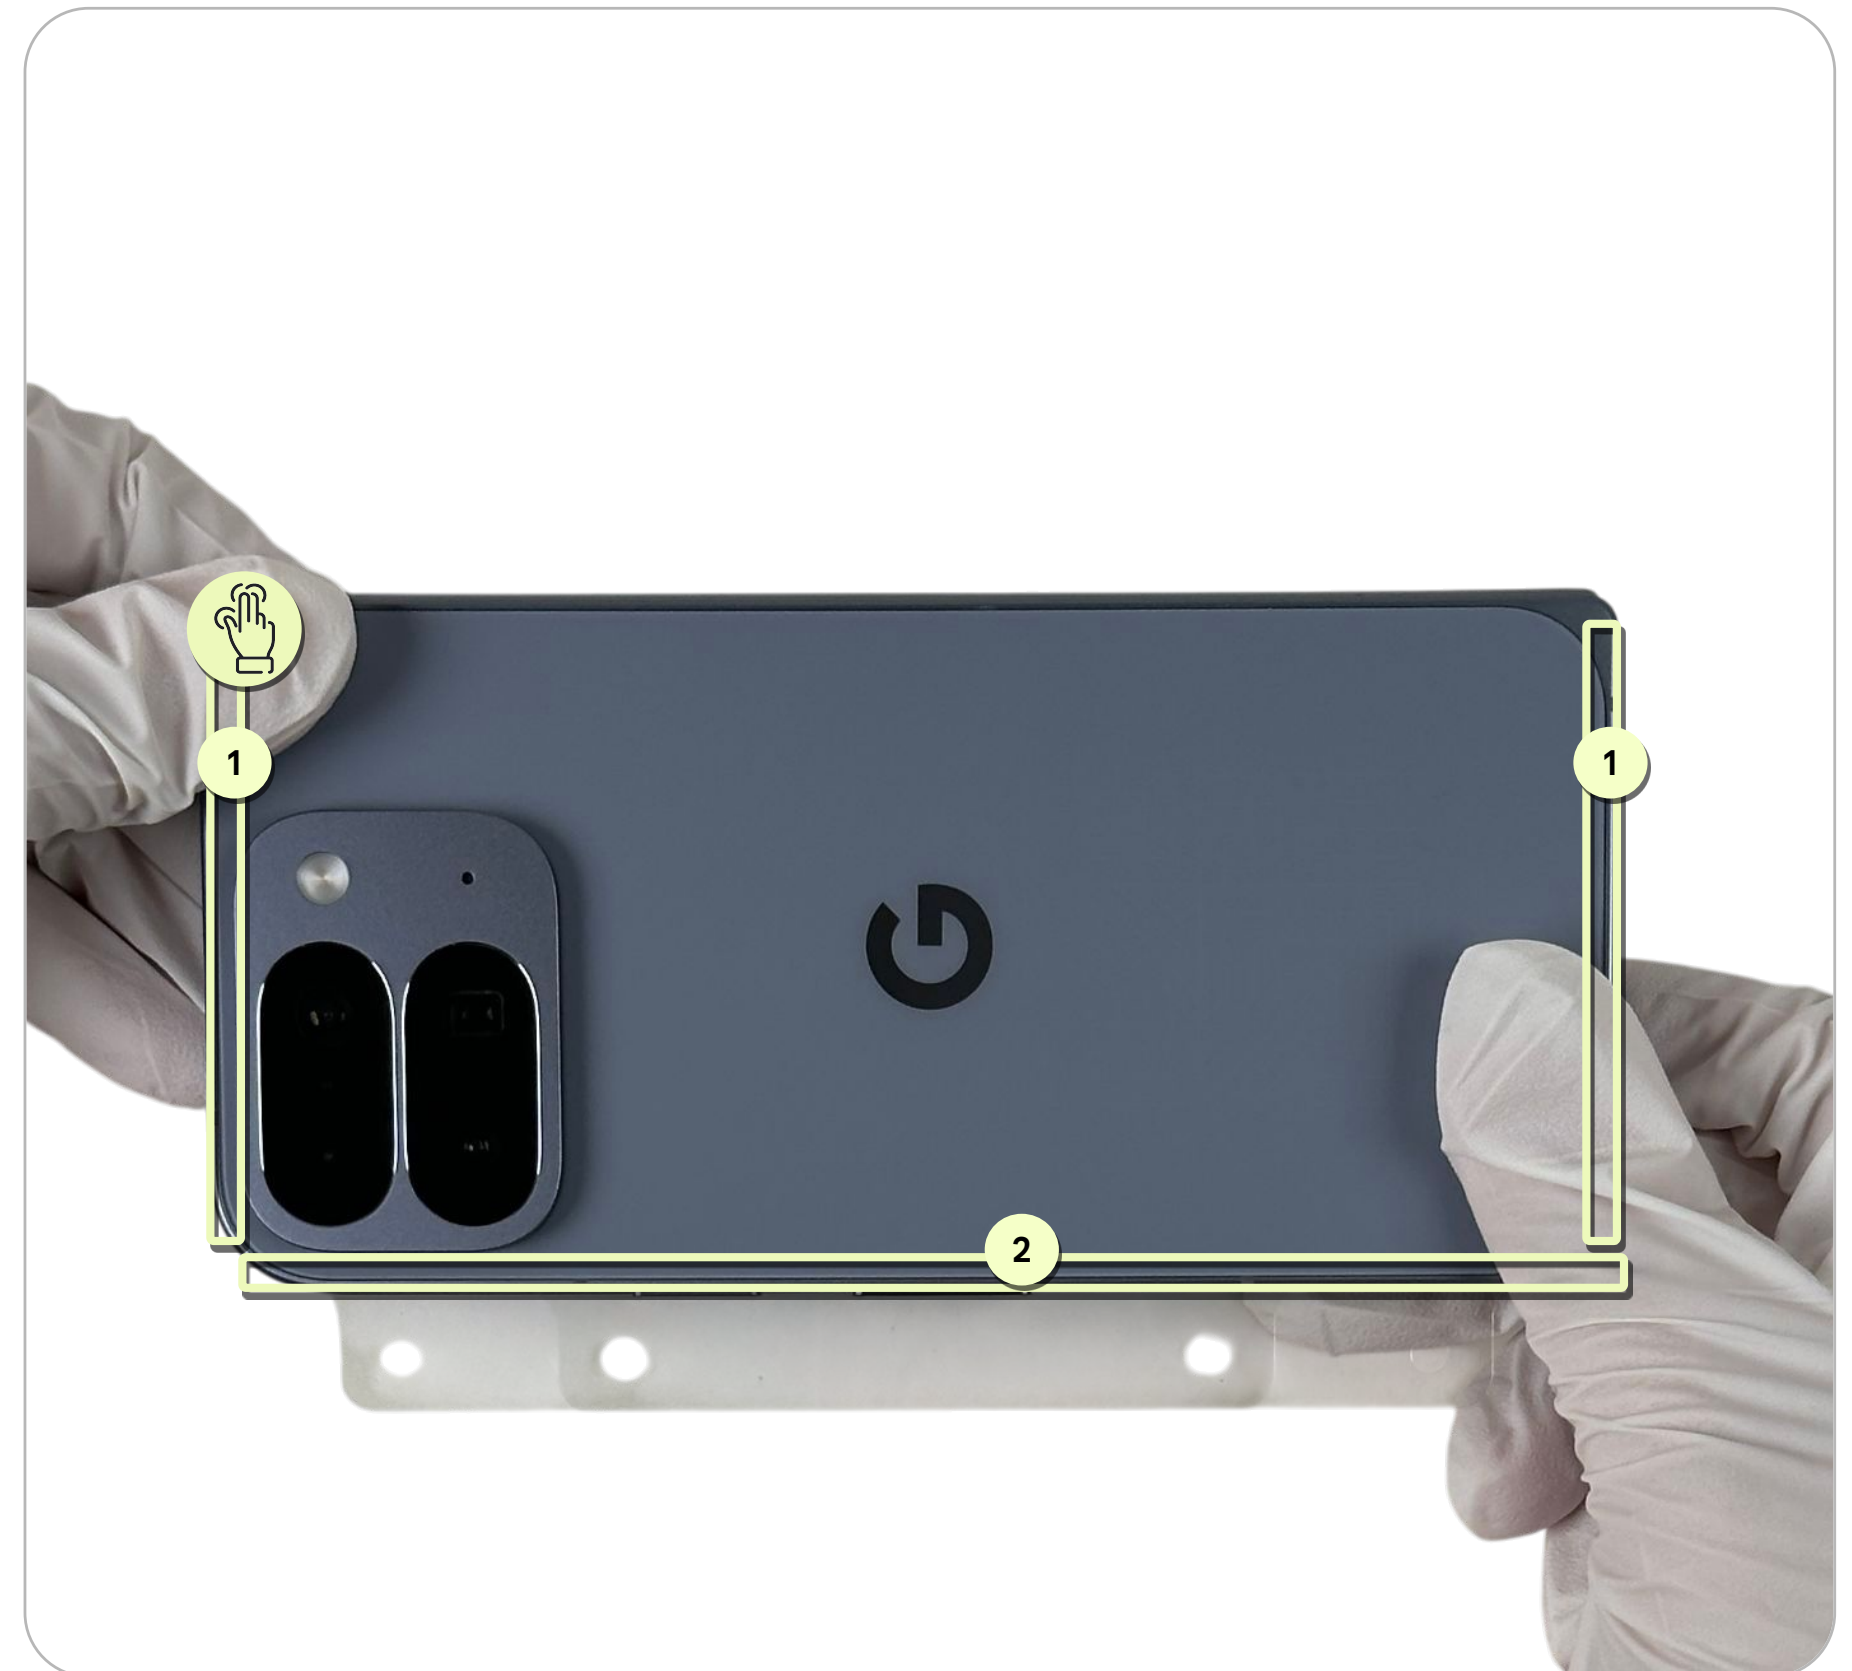

Press the base and flip trims

- Take the device out of the fixture.
- Fold the device and then press the first area for 20 seconds and press the second area for another 20 seconds to activate the **base and flip trim PSAs**.
- Unfold the device and gently remove both liners.

Use caution

Make sure that the environment is clean for this process.

Inner display trim

Solution 2: assemble manually

Solution 2: assemble manually

Remove the base trim liner

- Slowly peel off the outer liner from the **base trim**, and move your other hand along.
- Use **ESD tweezers** to remove the trim and carefully grab the first blue release liner. Repeat for the second and third blue release liners.

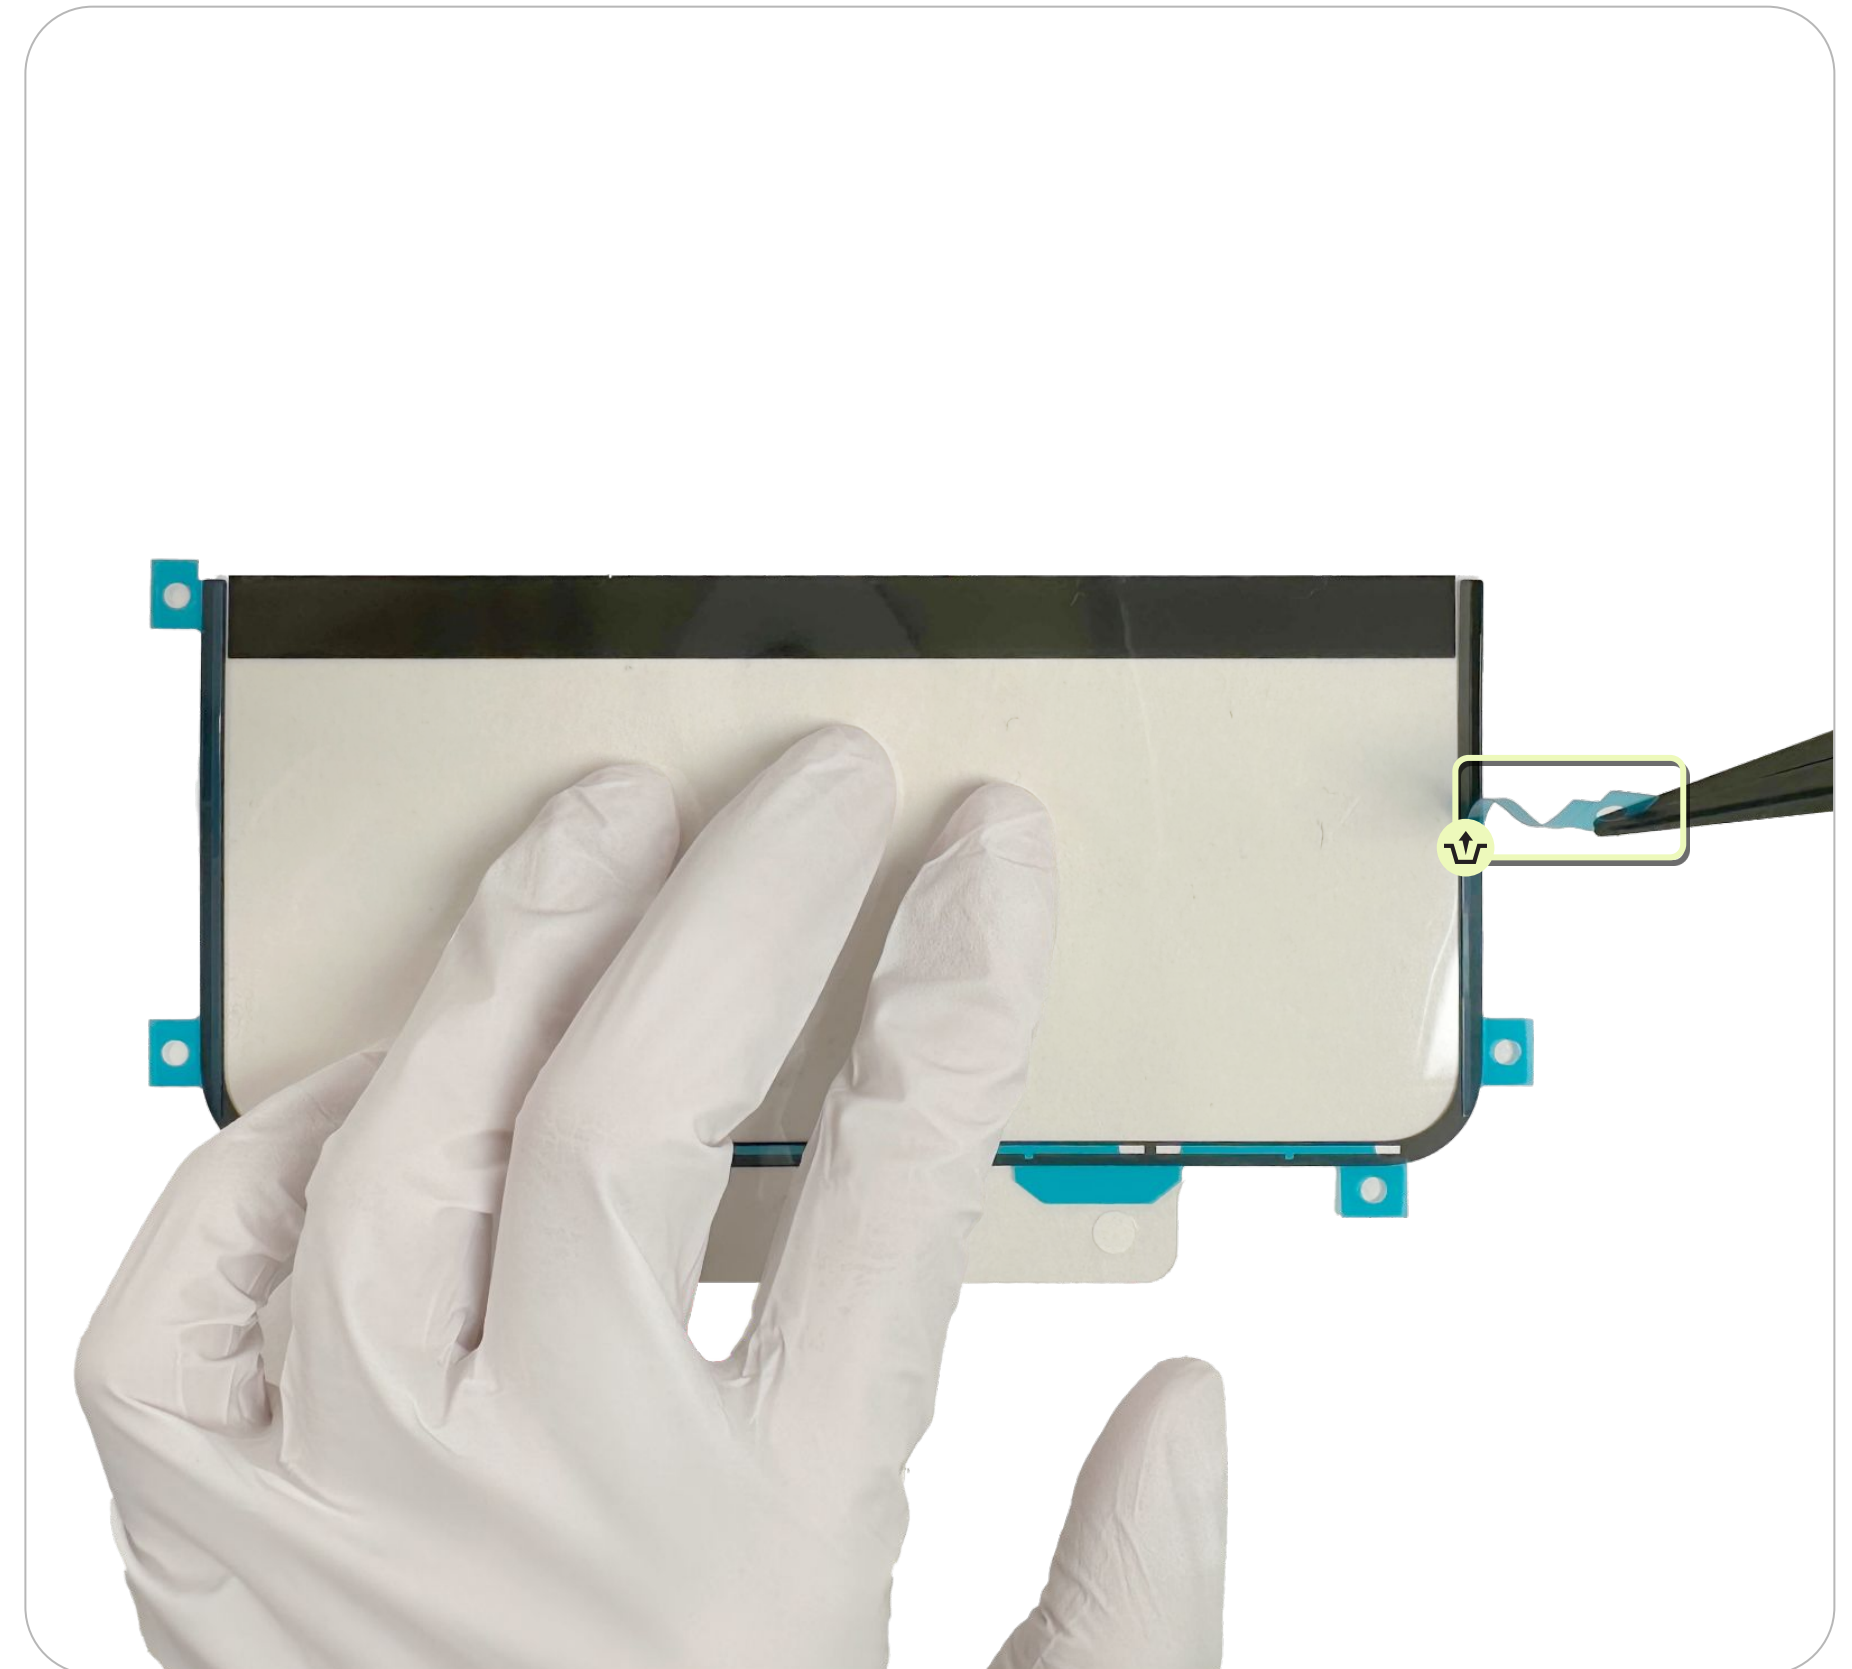

Part: G730-09903-00 (trim base)

Use caution

Make sure that the environment is clean for this process.

Be careful not to touch the trim or blue liner.

Solution 2: assemble manually

Place the base trim

Align the **base trim** with the lower left corner of the enclosure, and ensure that it sits flush within the frame.

Use caution

Make sure that the environment is clean for this process.

Solution 2: assemble manually

Apply the base trim

- Allow the **base trim** to adhere naturally.
- Press the edges near the hinge on both sides.
- Push outward to verify that the trim is in the groove.

Use caution

Make sure that the environment is clean for this process.

Solution 2: assemble manually

Remove the flip trim liner

- Slowly peel off the outer liner from the **flip trim**, move your other hand along.
- Use **ESD tweezers** to remove the trim and carefully grab the first blue release liner. Repeat for the second and third blue release liners.

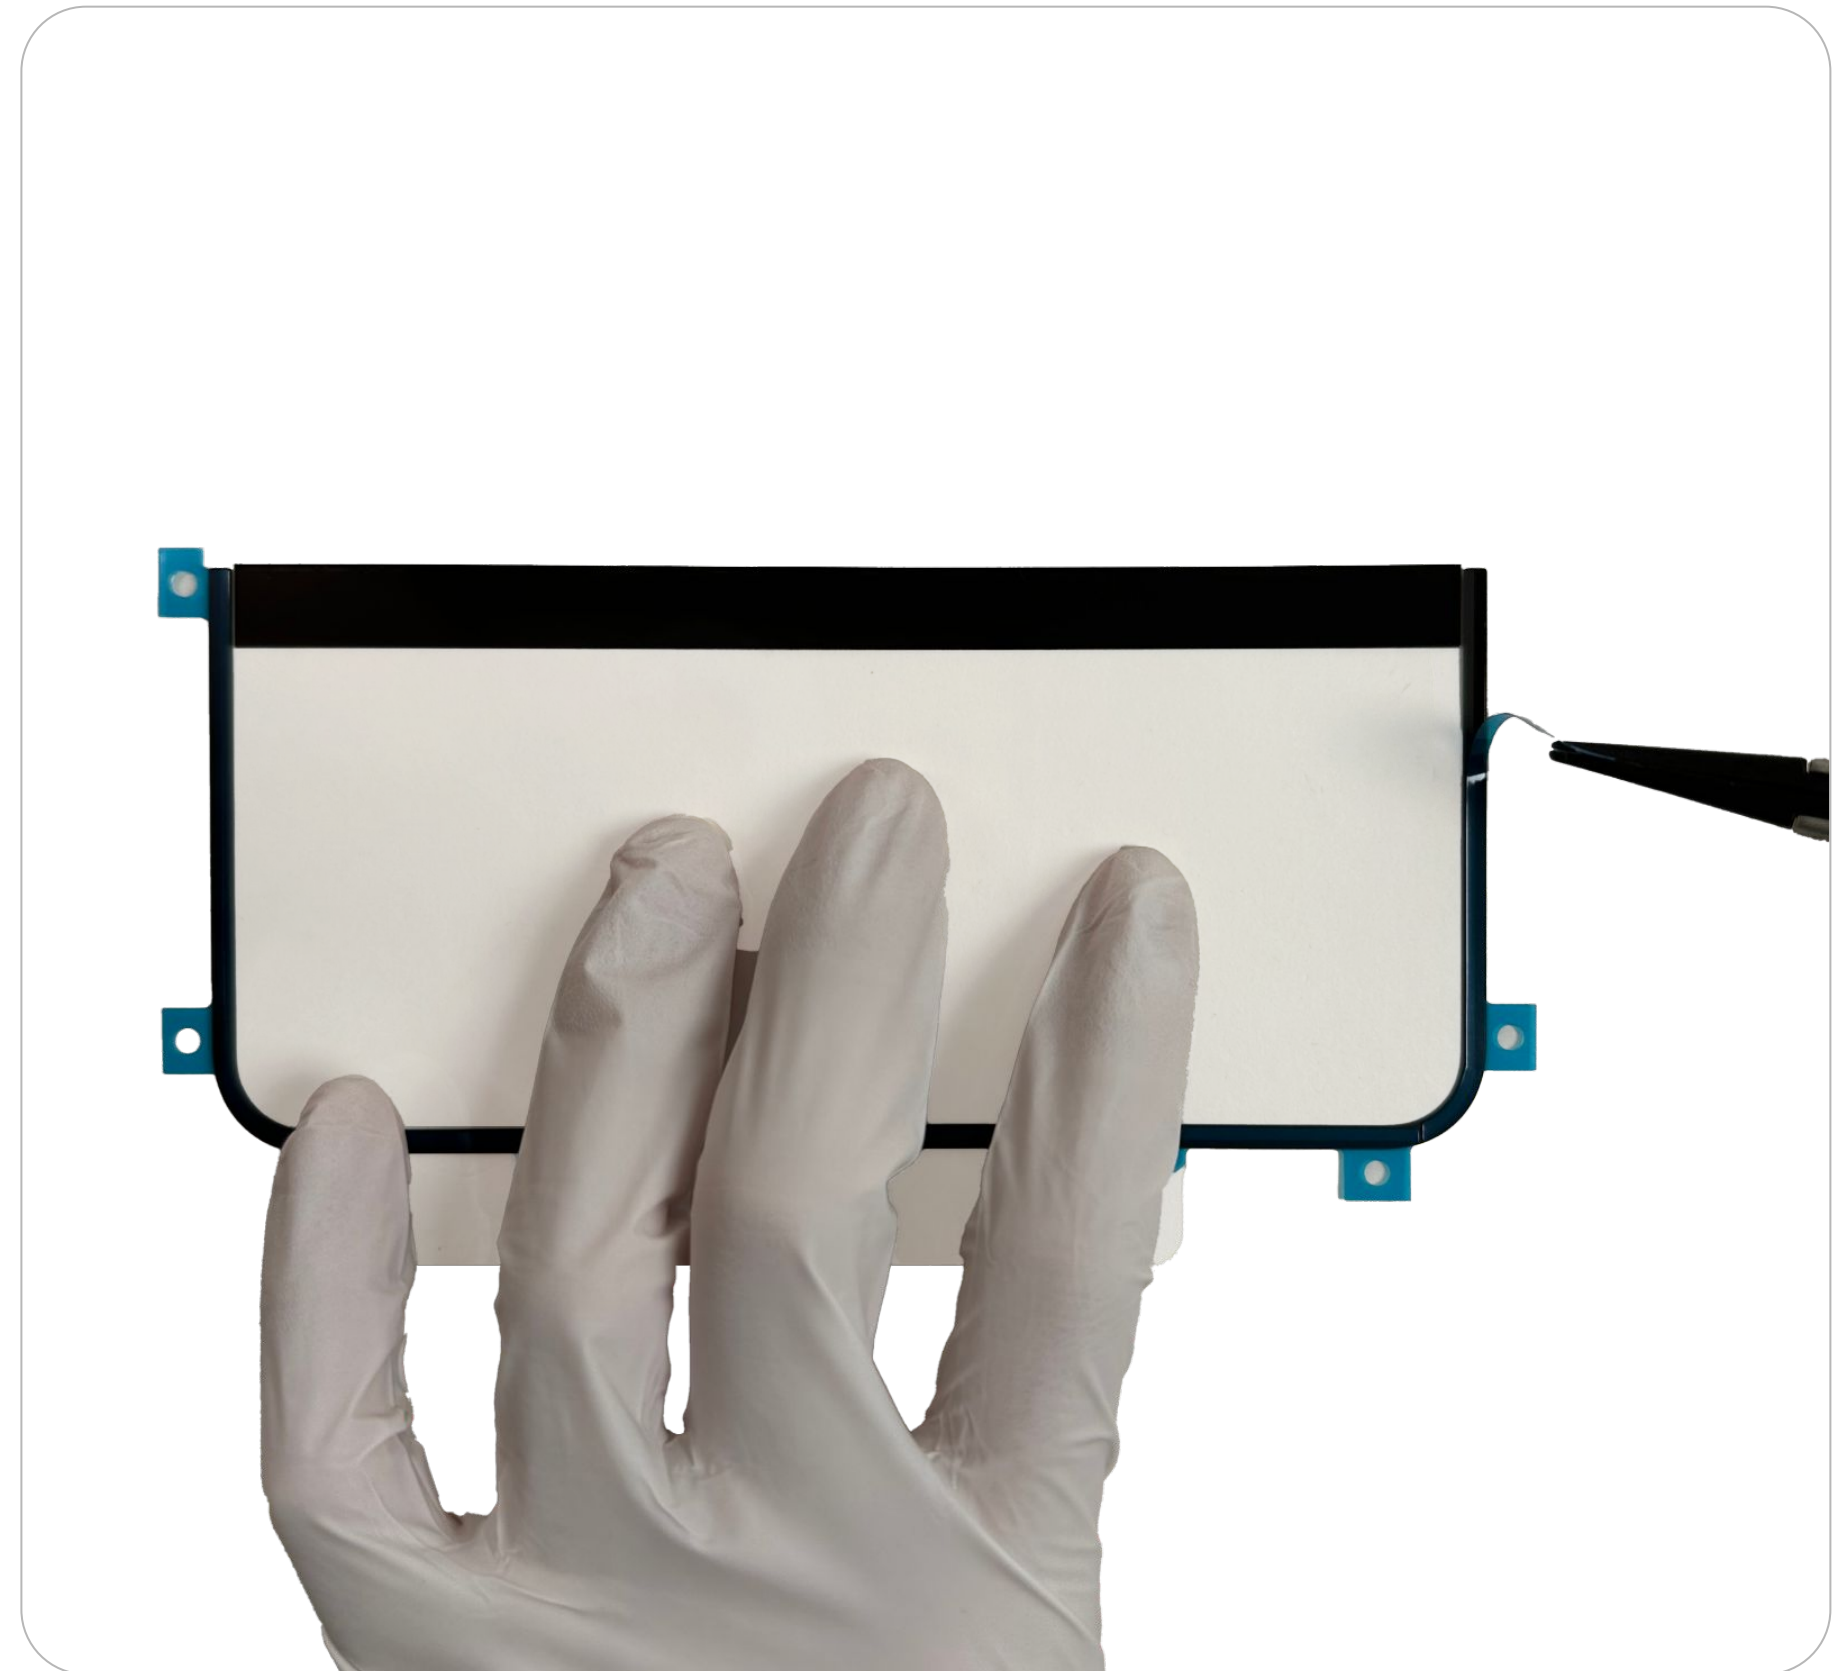

Part: G730-09911-00 (trim flip)

Use caution

Make sure that the environment is clean for this process.

Be careful not to touch the trim or blue liner.

Solution 2: assemble manually

Place the flip trim

- Rotate the device 180 degrees.
- Align the flip trim with the lower left corner of the enclosure, also verify that it sits flush within the frame.

Use caution

Make sure that the environment is clean for this process.

Solution 2: assemble manually

Apply the flip trim

- Allow the **flip trim** to adhere naturally.
- Press the edges near the hinge on both sides.
- Push outward to ensure that the trim is in the groove.

Use caution

Make sure that the environment is clean for this process.

Solution 2: assemble manually

Press the base and flip trims

- Take the device out of the fixture.
- Fold the device and then press the first area for 20 seconds and press the second area for another 20 seconds to activate the **base and flip trim PSAs**.
- Unfold the device and gently remove both liners.

Use caution

Make sure that the environment is clean for this process.

Pixel 10 Pro Fold repair manual

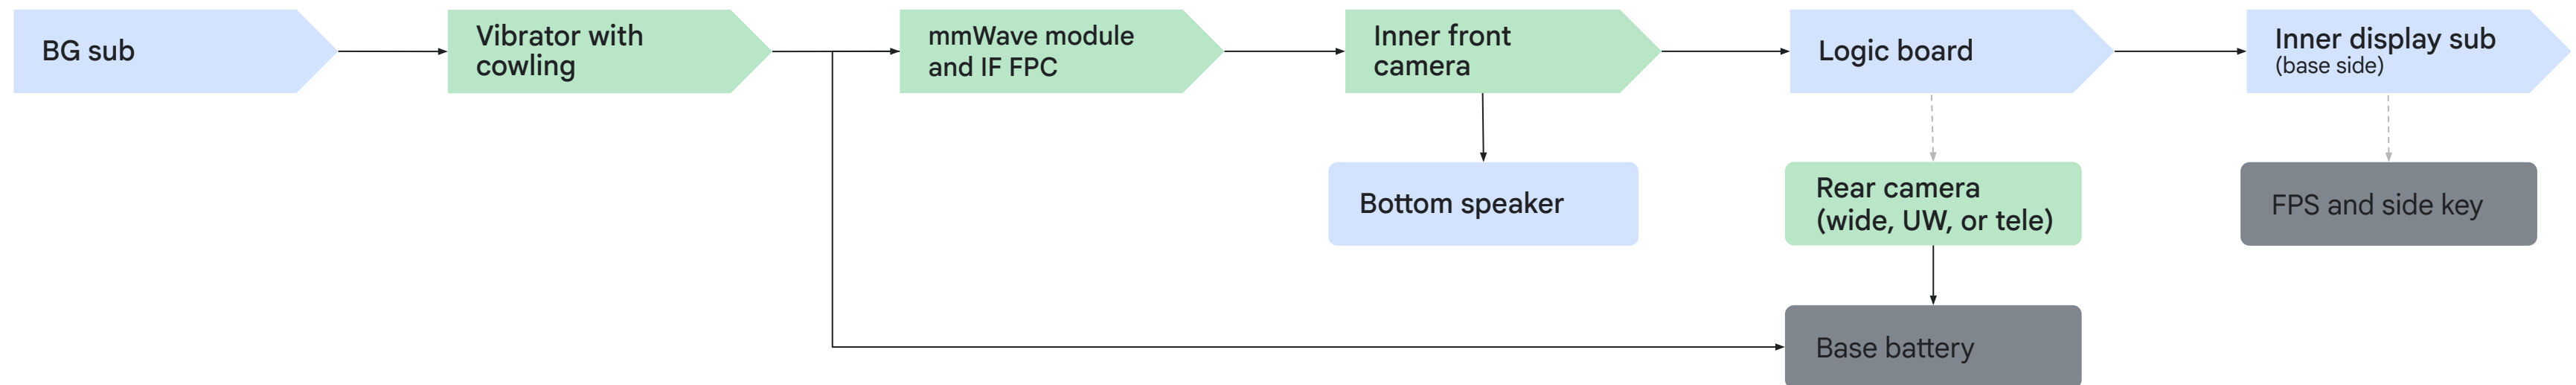

Repair flows

[Disassembly order](#)

[Assembly order](#)

Pixel 10 Pro Fold-base side (BG) disassembly flowchart

 To be removed before next process
  Optional to remove
  Reusable without you clean
  Reusable after you clean
  Not reusable after disassembly

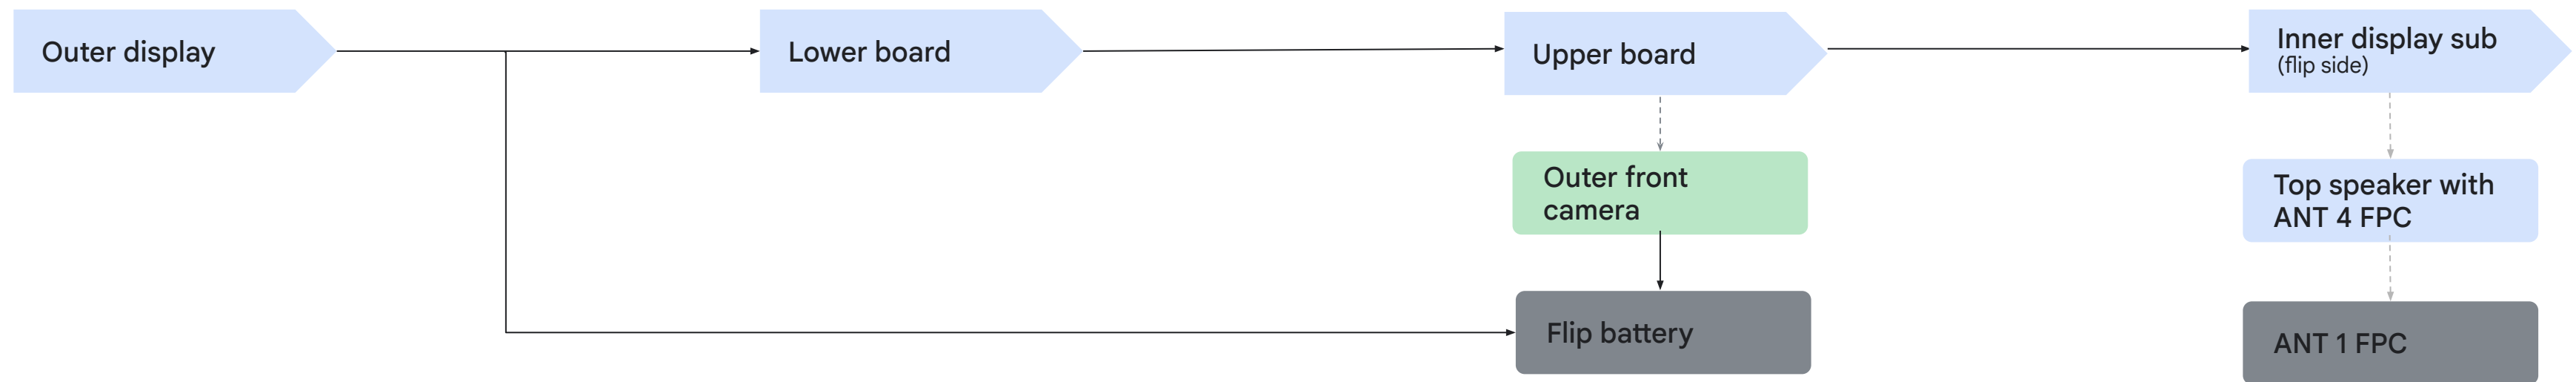

Base battery removal:

To make removal and replacement of the base battery easier: first take out the BG subassembly, then remove the vibrator with cowling, and finally, detach the base battery.

Pixel 10 Pro Fold-flip side (OD) disassembly flowchart

 To be removed before next process
  Optional to remove
  Reusable without you clean
  Reusable after you clean
  Not reusable after disassembly

Flip battery removal:

To make removal and replacement of the flip battery easier: first take out the outer display, and then the flip battery.

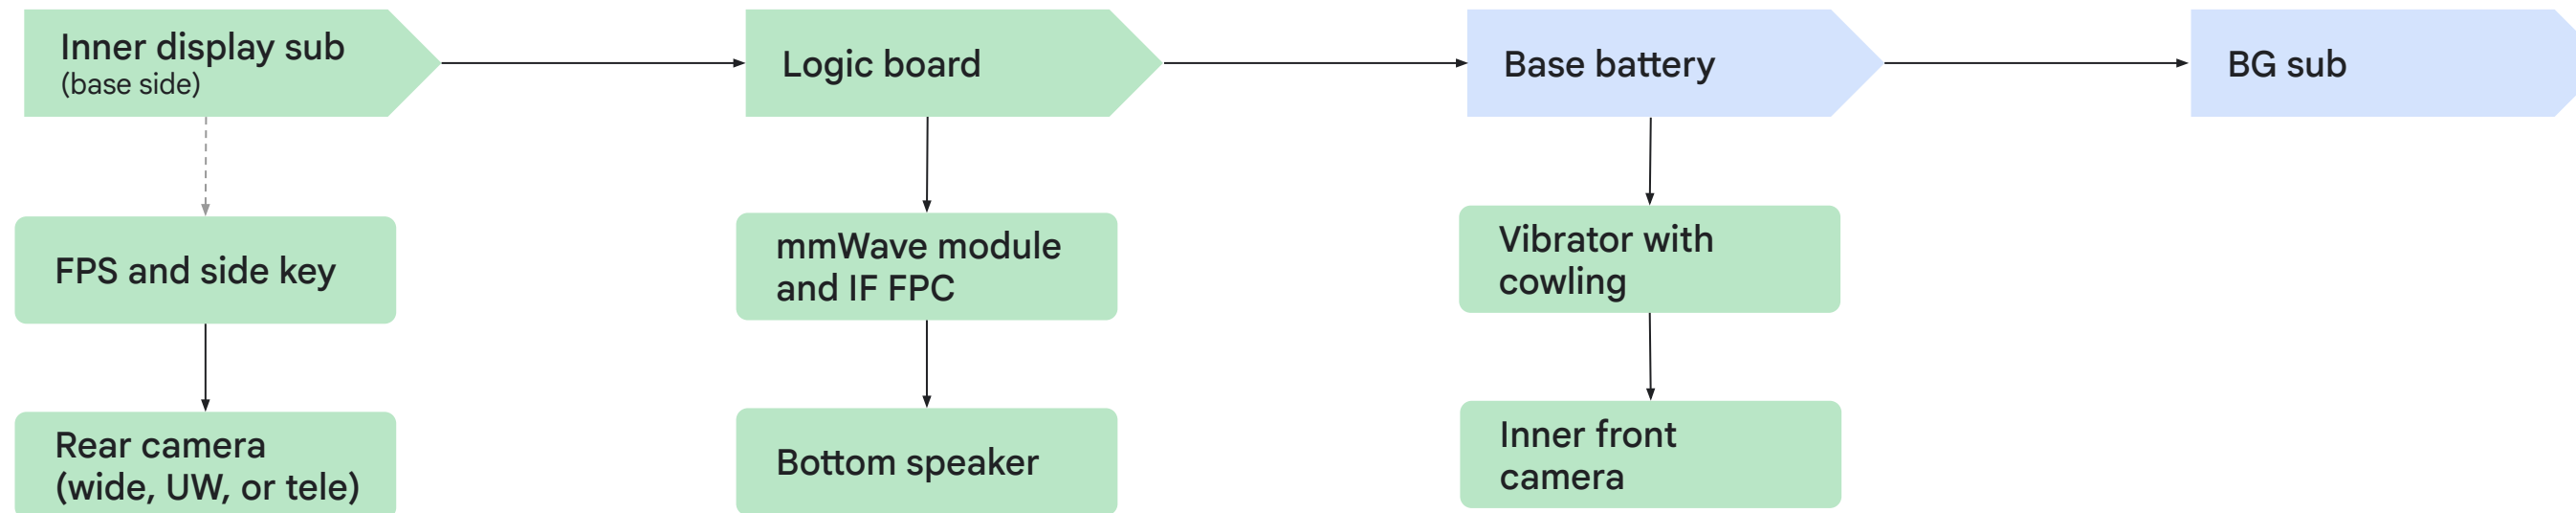

Note

The lower board and upper board are on the same layer. You could remove them independently.

Pixel 10 Pro Fold-base side (BG) assembly flowchart

● Assembled without a fixture

● Assembled with a fixture

Use caution

When you perform the inner display replacement, follow the sequence to assemble the base side then the flip side.

How to read this chart

To reinstall the base battery:

Install the base battery, vibrator with cowling, inner front camera, then the BG sub.

To reinstall the logic board:

Install the logic board, IF FPC or mmWave module, bottom speaker, base battery, vibrator with cowling, inner front camera, then the BG sub.

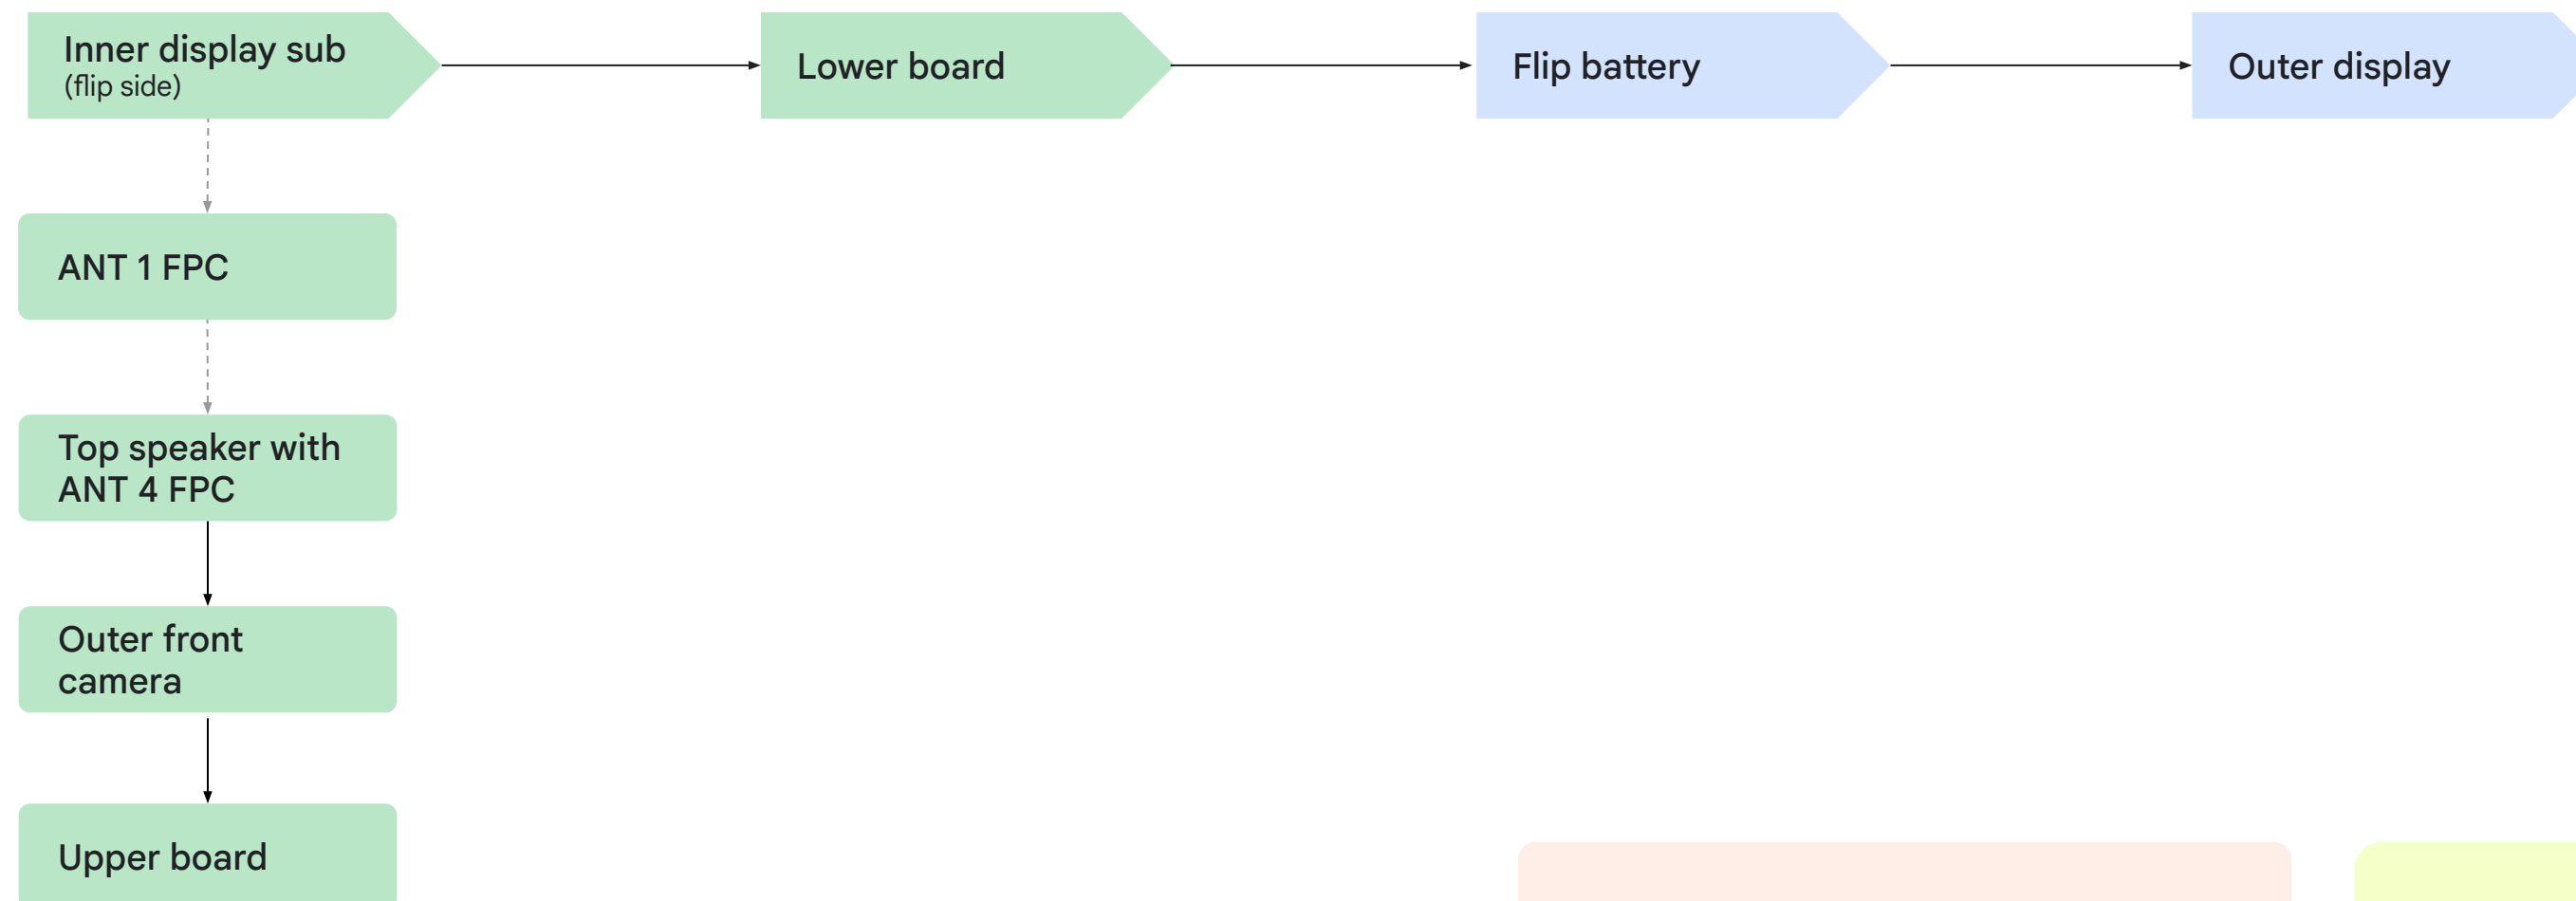

New ID sub:

The new inner display sub includes the FPS and the sidekey.

Pixel 10 Pro Fold-flip side (OD) assembly flowchart

● Assembled without a fixture

● Assembled with a fixture

Use caution

When you perform the inner display replacement, follow the sequence to the assembly base side then the flip side.

How to read this chart

To reinstall the flip battery:

Install the flip battery, then the outer display.

To reinstall the lower board:

Install the lower board, flip battery, then the outer display.

New ID Sub:

The new inner display sub includes the Ant 1 FPC and top speaker with Ant 4 FPC.

Reusability: ●

Alignment mylar
G806-16220-00

Reusability: ●

Avoid the spring damage

Before you remove the BG sub, be aware of the springs underneath, refer to the figure for locations.

Use caution

Avoid damage to the springs during disassembly.

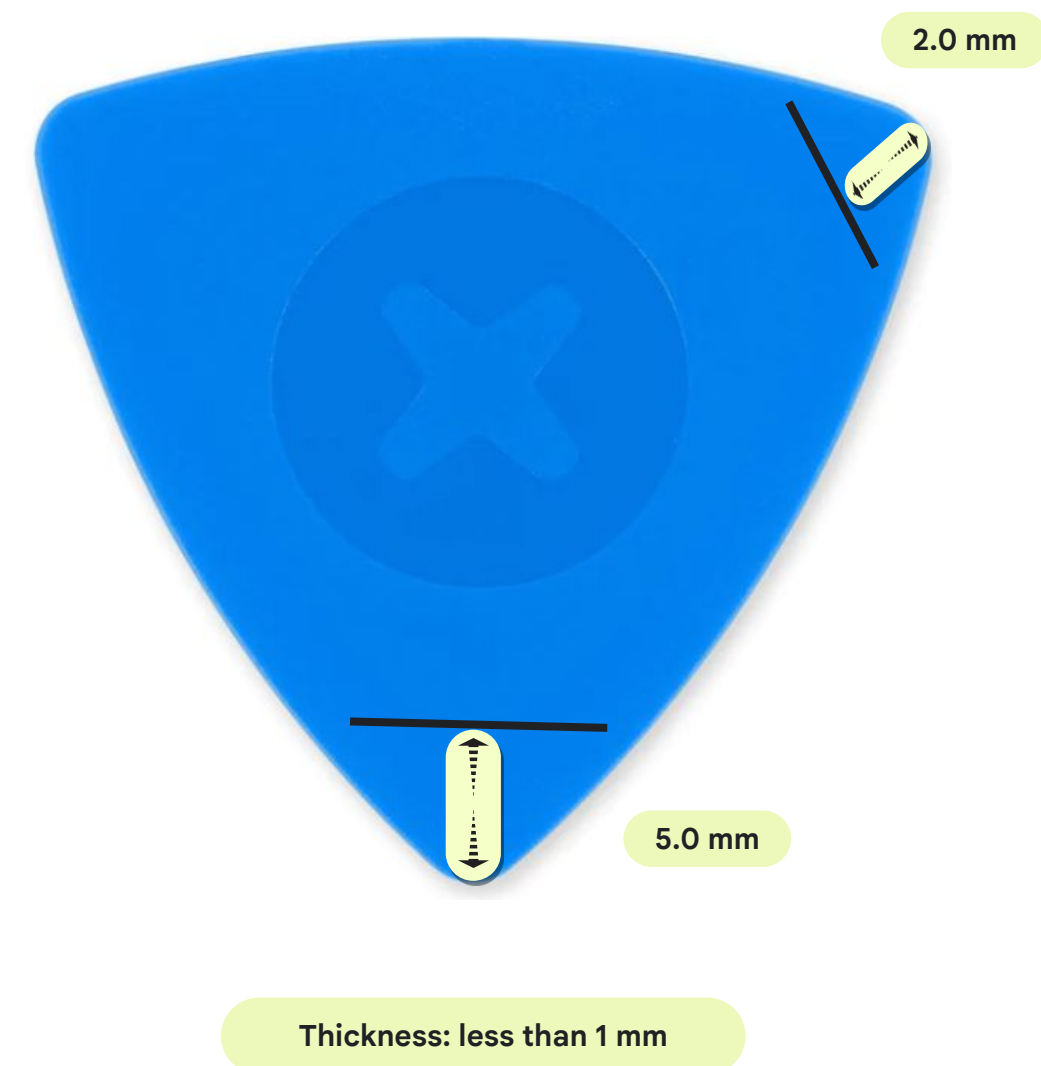

Mark the opening pick

- Use an opening pick to separate the BG from the enclosure. If you insert it too far, it could damage the device.
- The device has two adhesive widths. Measure 2.0 mm and 5 mm from the tip and mark the opening pick with a permanent mark.

Use caution

Follow the steps to mark your pick and prevent damage.

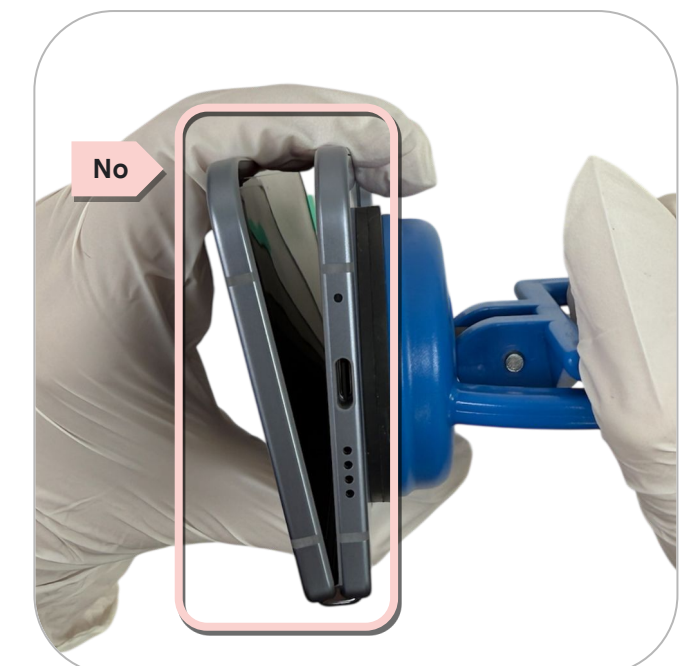

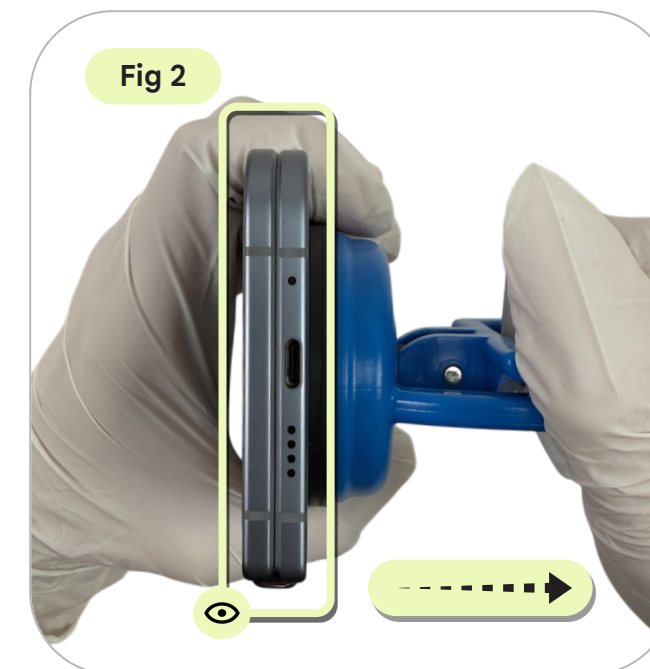

Separate the BG

- Use caution when you separate the adhesive to avoid damage to the spring contacts.
- Apply a suction cup to the BG, close to the USB side, as shown in **Fig 1**.
- Hold the device and pull up the suction cup forcefully until a gap appears, then insert an opening pick into the gap, as shown in **Fig 3**.

Use caution

Don't insert your opening pick deeper than 2.0 mm when you separate the adhesive, as it risks damaging the spring contacts.

Cut through the BG adhesive

- Slide your opening pick clockwise.
- Cut adhesive on the left edge where PSA is smaller, then open toward the hinge to separate the larger adhesive side.
- Use the large suction cup to hold the BG after you open the device.

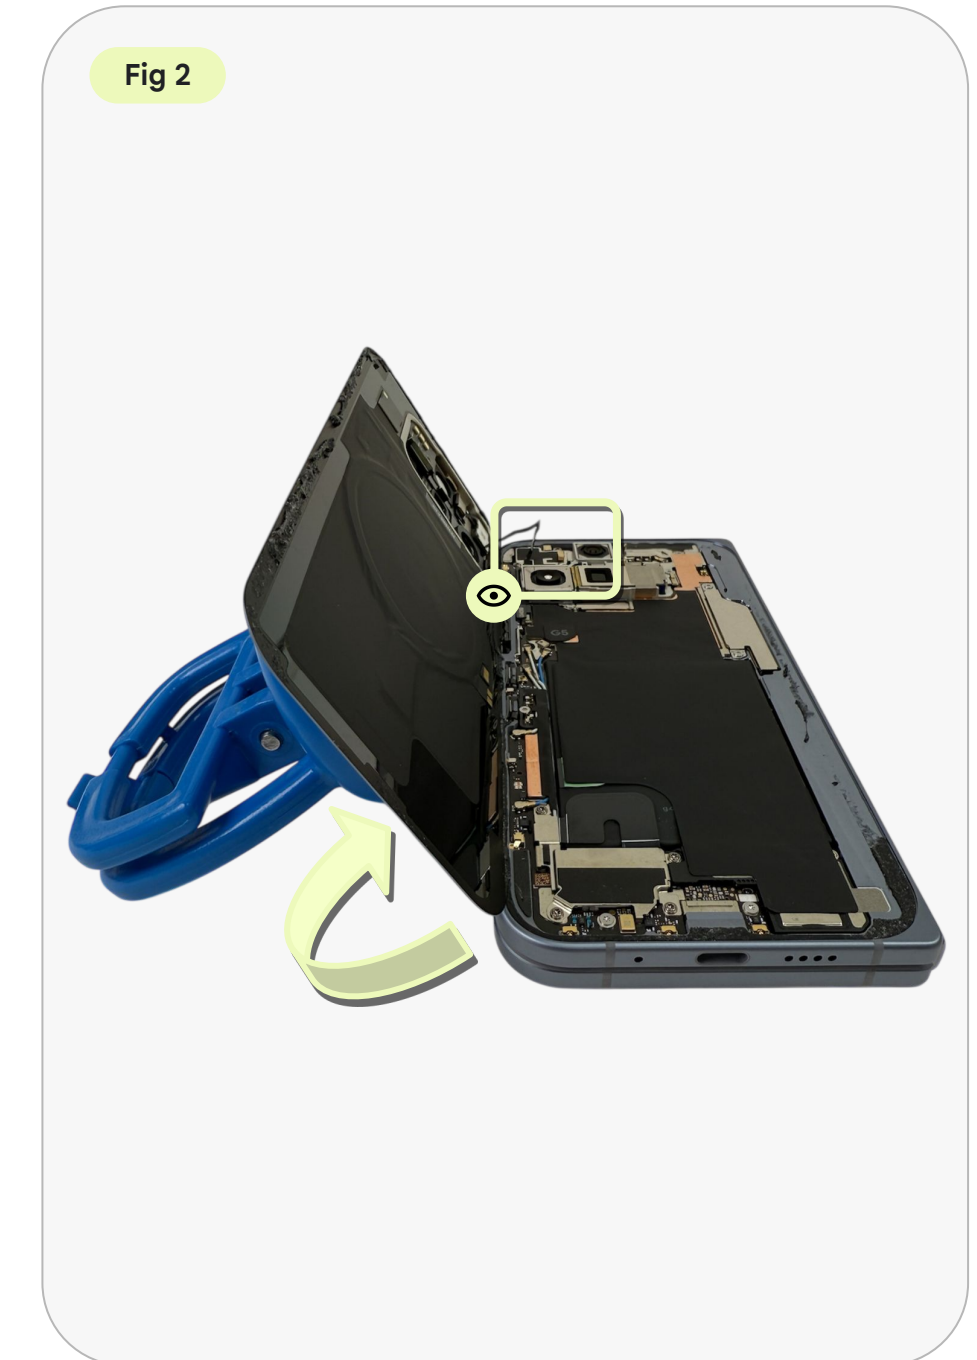

Disassembly sequence

1 (insert opening pick with 2.0 mm) → 2 (2.0 mm) → 3 (2.0 mm) → 4 (5.0 mm)

Use caution

Don't fully remove the BG yet, as it's still connected by the flam board flex.

Detach the BG

- Remove **three FCAM cowling screws** with a torx plus 3IP screwdriver.
- Remove the **FCAM cowling** to reveal the **FLAM FPC B2B connector**.

Part: G250-08004-20 *3 (screws)

Part: G730-09675-00 (inner FCAM cowling)

Use caution

Don't reuse the screw.

Avoid to damage the adjacent battery, flex board, springs, and the connector underneath.

Finished! Want assembly instructions? →

Remove the BG

- Disengage **connector** and remove the **BG**.

Vibrator with cowling

The vibrator with cowling is screwed to the enclosure.

Use caution

Review all safety precautions before you begin work.

Prerequisites

Here's the list of components that you should remove first:

- **BG sub**

Tools

Torx plus 3IP screwdriver

 Required parts

Vibrator with cowling

Here's the list of parts for the vibrator disassembly.

Reuse indications

 Reusable without cleaning

Screw

G250-08004-20

Graphite sheet

G864-01067-00

Sponge

G806-15352-00

Remove the graphite

- Peel the bottom of the **graphite sheet** and slowly move towards the top of the device.
- Part of the graphite sheet is lightly adhered to the copper foil on the **logic board**; peel it away slowly to avoid breaking the copper foil.

Part: G864-01067-00 (graphite sheet)

⚠ Use caution

Avoid use of sharp objects or tools to prevent damage to the **battery**.

Don't reuse the part.

[Finished! Want assembly instructions? →](#)

Remove the vibrator with cowling

Unscrew the **four vibrator cowling screws** with a torx plus 3IP screwdriver, and remove the vibrator with cowling.

Part: G250-08004-20 *4 (screws)

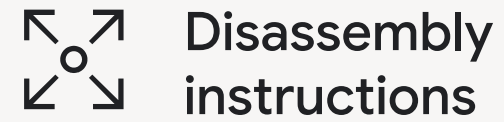

Part: G949-01536-00 (vibrator with cowling)

Use caution

Avoid use of sharp objects or tools to prevent damage to the **battery**.

mmWave module and IF FPC

mmWave are the radio waves used to build a 5G network that provides fast and reliable mobile data with low latency for the latest devices.

Use caution

Review all safety precautions before you begin work.

Prerequisites

Here's the list of components that should be removed first:

- **BG sub**

Tools

Torx plus 3IP screwdriver
Tweezers
Spudger
IPA and cloth
Dust-free cotton swabs

Required parts

Reuse indications

Reusable without you clean

Reusable after you clean

Not reusable after disassembly

mmWave module and IF FPC

Here's the list of parts for the mmWave module and IF FPC disassembly.

mmWave module

G345-01633-02

IF FPC

G652-10426-01

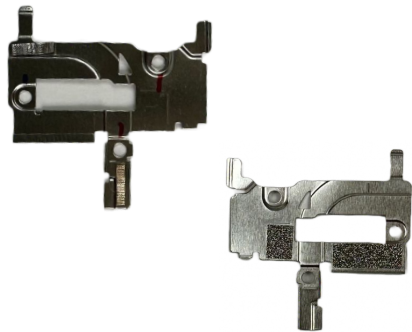

Base bridge cowling

G730-09678-00

G250-06986-00

ID cowling PSA

G806-14384-00

Remove the screws

- Remove **six screws** with a torx plus 3IP screwdriver.
- Remove the **base bridge**, the **mmWave**, and the **ID cowlings**.

Part: G250-06986-00 *1 (screw)

Part: G250-06623-00 *5 (screws)

Part: G730-09678-00 (base bridge cowling)

Part: G730-09676-00 (mmWave cowling)

Part: G730-09680-00 (ID cowling)

Use caution

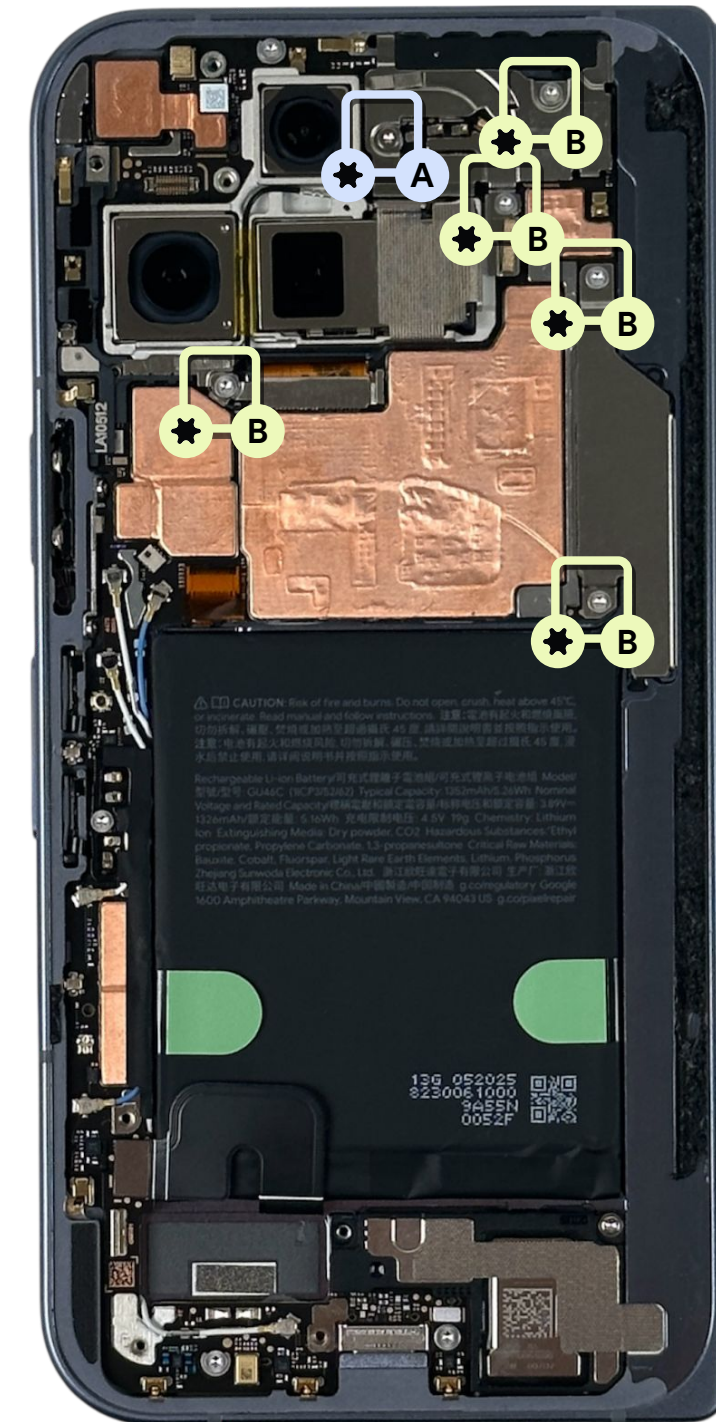

Be cautious when you use the screwdriver.
Avoid to damage the adjacent battery.

Incorrect use of the screwdriver might result in injuries to yourself or others, as well as damage to the battery or the product.

Note

Don't reuse the screws.

A: G250-06986-00

B: G250-06623-00

Disengage flexes

Disconnect the revealed **flexes** in the designated order with the **ESD spudger**.

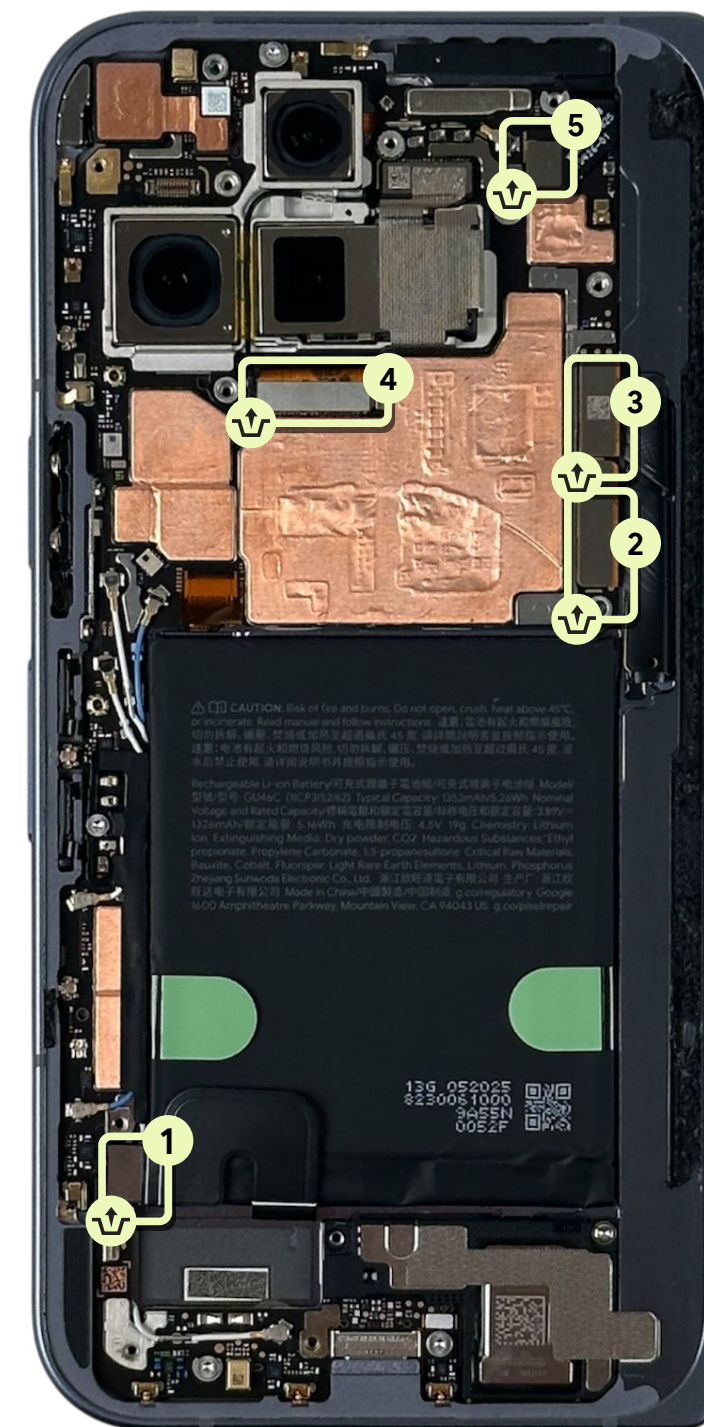

Disassembly sequence

1 (base battery) → 2 (base bridge bottom) → 3 (base bridge top) → 4 (inner display) → 5 (IF FPC)

Note

Use a spudger to avoid damage to the components.

Remove the mmWave module and IF FPC

- mmWave module is lightly adhered to the enclosure. Insert a spudger to detach the **mmWave module**.

Part: G345-01633-02 (mmWave module)

Part: G652-10426-01 (IF FPC)

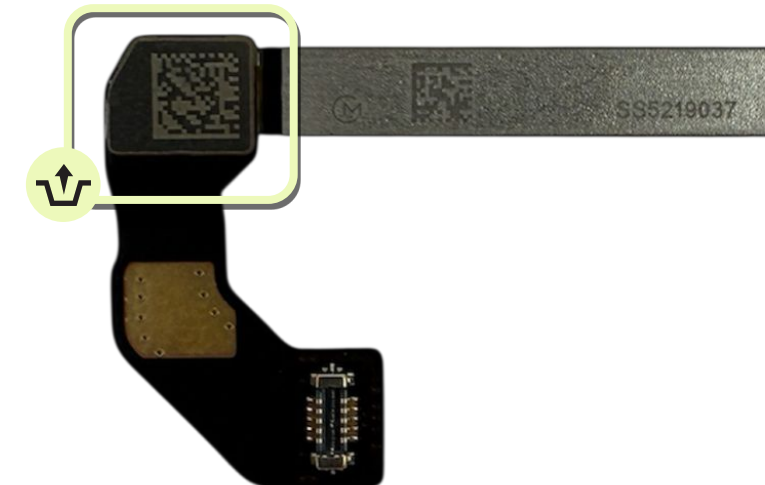

Finished! Want assembly instructions? →

Disconnect the IF FPC

Separate the **IF FPC** from the **mmWave module**.

Part: G345-01633-02 (mmWave module)

Part: G652-10426-01 (IF FPC)

Inner front camera

The inner front camera is fastened to the enclosure and connected to the logic board.

Use caution

Review all safety precautions before you begin work.

Prerequisites

Here's the list of components that should be removed first:

- **BG sub**
- **Inner FCAM**

Tools

Spudger

 Required parts

Inner front camera

Here's the list of parts for the inner front camera disassembly.

Bottom speaker 
G863-00646-00

Screw 
G250-08005-12

Bottom speaker CPESA 
G806-13932-00

Conductive fabric 
G806-14375-00

Remove the screw

- Remove the screw with a **torx plus 3IP screwdriver**.
- Detach the right end of the **conductive fabric** with a **spudger** or **tweezers**.

Part: G250-08005-12 (screw)

Part: G806-14375-00 (conductive fabric)

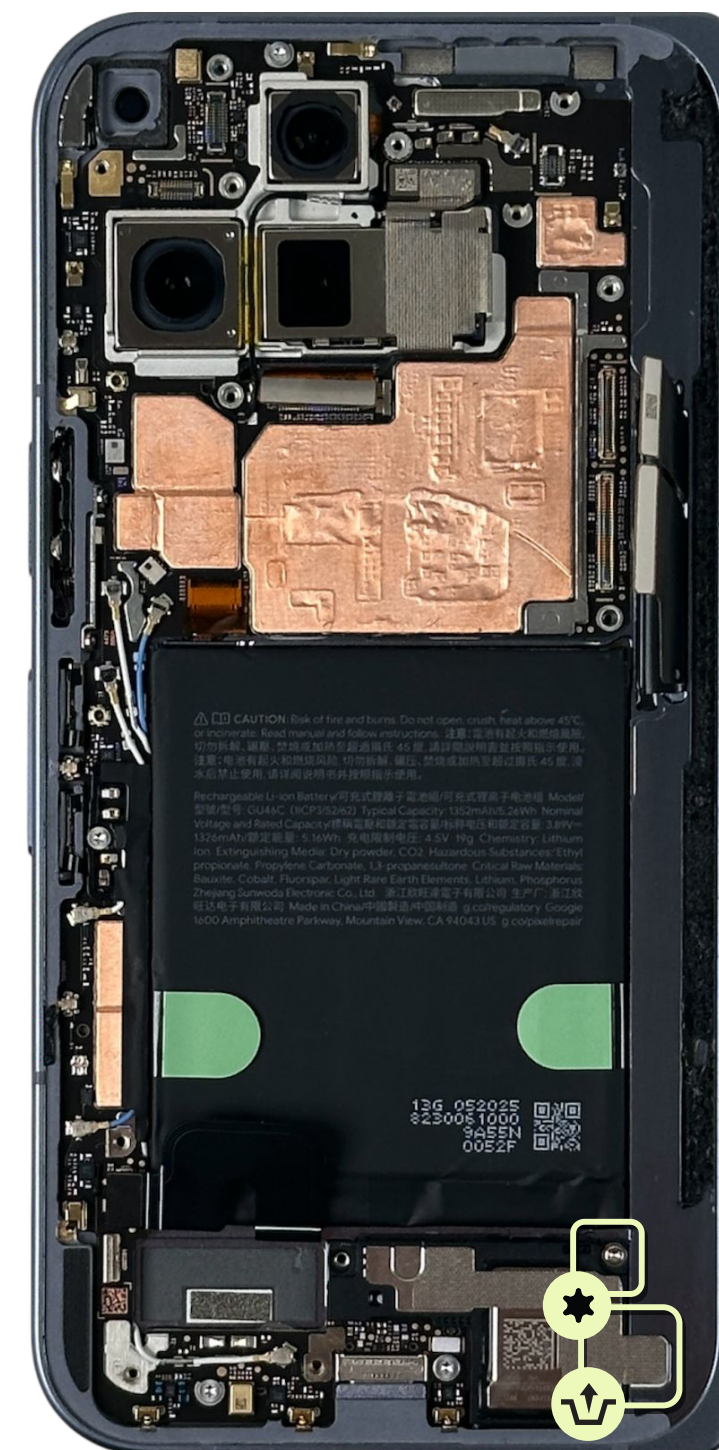

Note

Don't reuse the screw or conductive fabric.

Use caution

Avoid use of sharp objects or tools to prevent damage to the **battery**.

Finished! Want assembly instructions? →

Remove the bottom speaker

Press the screw boss area with the point of the **ESD spudger** and pry up to eject the **bottom speaker**.

Part: G863-00646-00 (bottom speaker)

Use caution

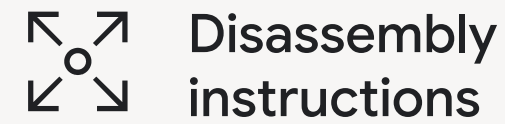

Be careful to avoid damage to the components on the **bottom speaker**.

Use caution

Avoid use of sharp objects or tools to prevent damage to the **battery**.

Logic board

The logic board consists of the memory, storage, processor, and communication components such as Wi-Fi and mmW.

Use caution

Review all safety precautions before you begin work.

Prerequisites

Here's the list of components that should be removed first:

- **BG sub**
- **Vibrator with cowling**
- **mmWave module**
- **Inner front camera**
- **Bottom speaker**

Tools

Multiple part numbers

Screw*4

G250-06623-00

FPS Kapton

G806-14456-01

Thermal grease

G160-01058-00

Remove the logic board screws

Remove the four logic board screws with a torx plus 3IP screwdriver.

Part: G250-06623-00 *4 (screws)

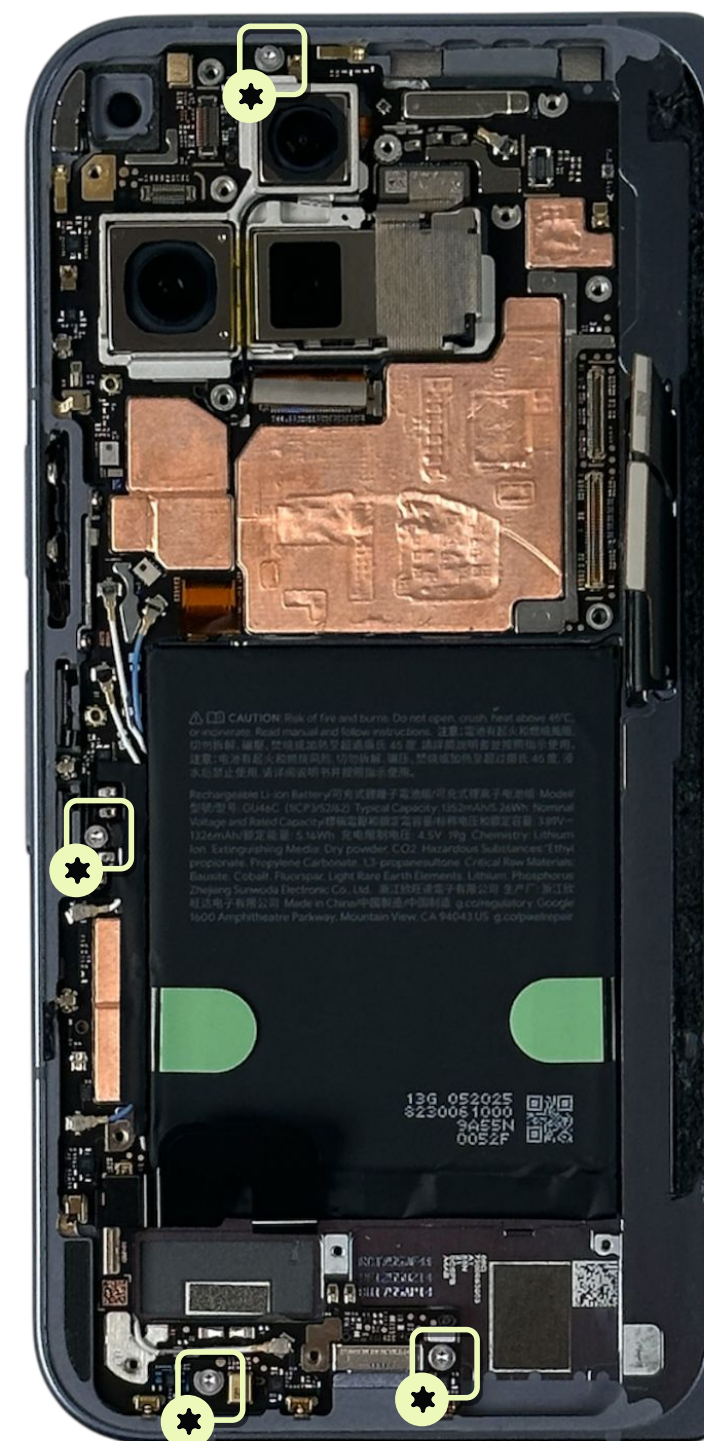

Use caution

Avoid use of sharp objects or tools to prevent damage to the **battery**.

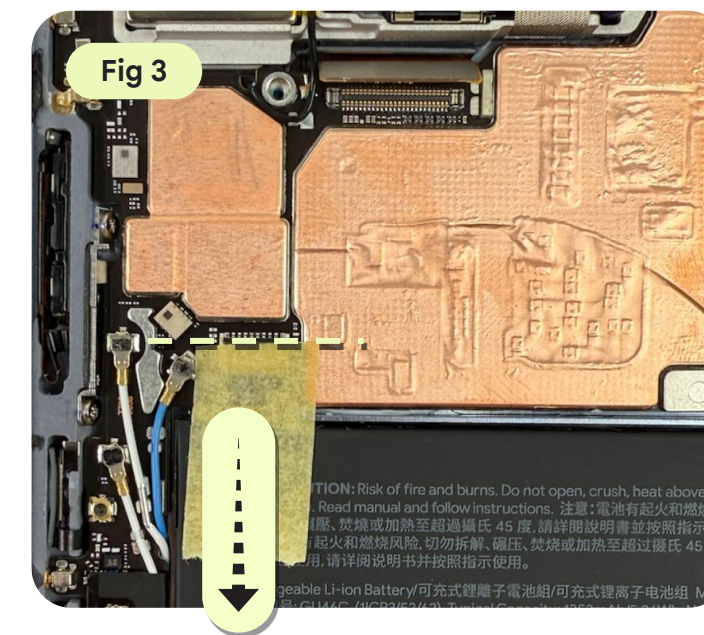

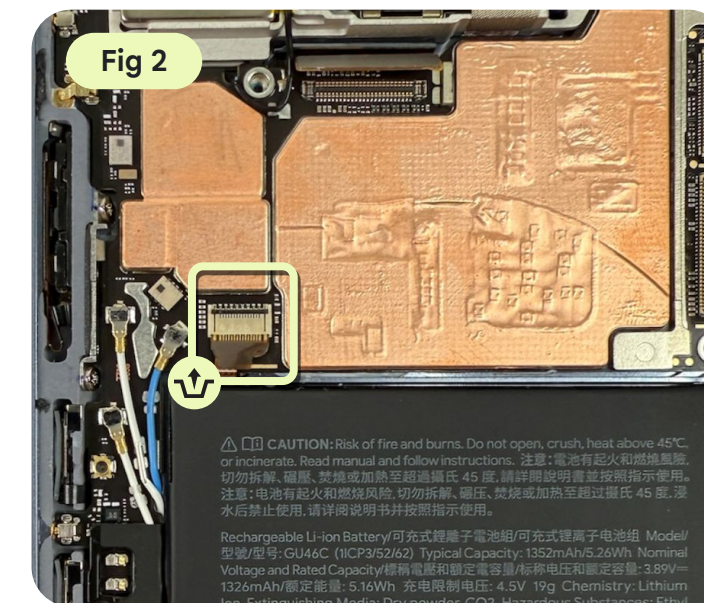

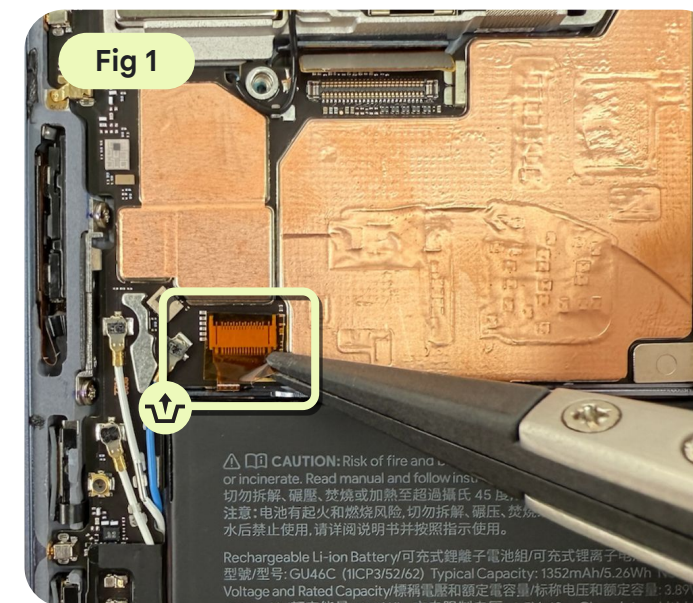

Note

Don't reuse the screws.

Disconnect the FPS flex

- Peel off the **Kapton tape** covering the **MLB ZIF connector**, as shown in **Fig 1**.
- Open the **latch** with the **ESD spudger**, as shown in **Fig 2**.
- Apply **masking tape** to the top of the ribbon cable which creates a tab for better grip, as shown in **Fig 3**.
- Pull the tape downward forcefully to extract the ribbon cable from the **ZIF connector**.

Part: G806-14456-01 (FPS Kapton)

Note

To avoid damage to the cable, make sure that the masking tape is properly aligned with the top of the cable.

Note

Don't reuse the FPS Kapton.

Use a spudger to avoid damage to the components.

Finished! Want assembly instructions? →

Remove the logic board

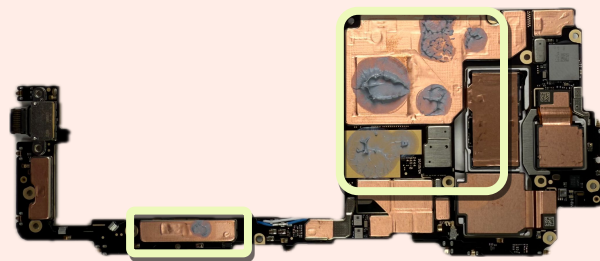

- Use a **spudger** to pry up the **logic board** from the mmWave recess.
- The **logic board** is embedded in the USB slot. To release it, pull it upward toward the top of the device.

Part: multiple part numbers (logic board)

⚠ Use caution

Be careful to avoid damage to the components on the logic board.

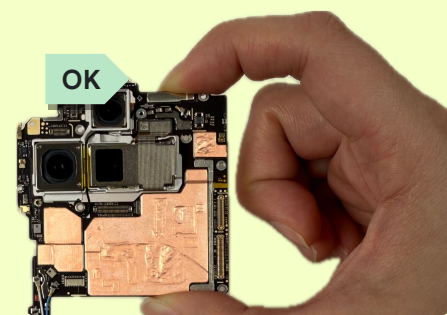

Be careful not to touch other components with the thermal grease during removal.

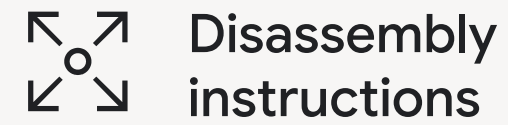

💡 Note

Don't wear gloves when you handle the logic board.

Grip the logic board with your fingers.

Rear camera

The rear camera module carries all the rear cameras.
It's possible to replace a single camera.

Use caution

Review all safety precautions before you begin work.

Prerequisites

Here's the list of components that you should be removed first:

- **BG sub**
- **Vibrator with cowling**
- **mmWave module**
- **Inner front camera**
- **Bottom speaker**
- **Logic board**

Tools

G806-13994-01

Rear camera_WIDE 
G806-14592-00

Rear camera_UW 
G806-14593-00

Rear camera_tele 
G806-14594-00

Remove the Kapton and cable

- Detach the **Kapton tape** between the WIDE and tele cameras, and unlatch the **coaxial cable connector** with **tweezers**.

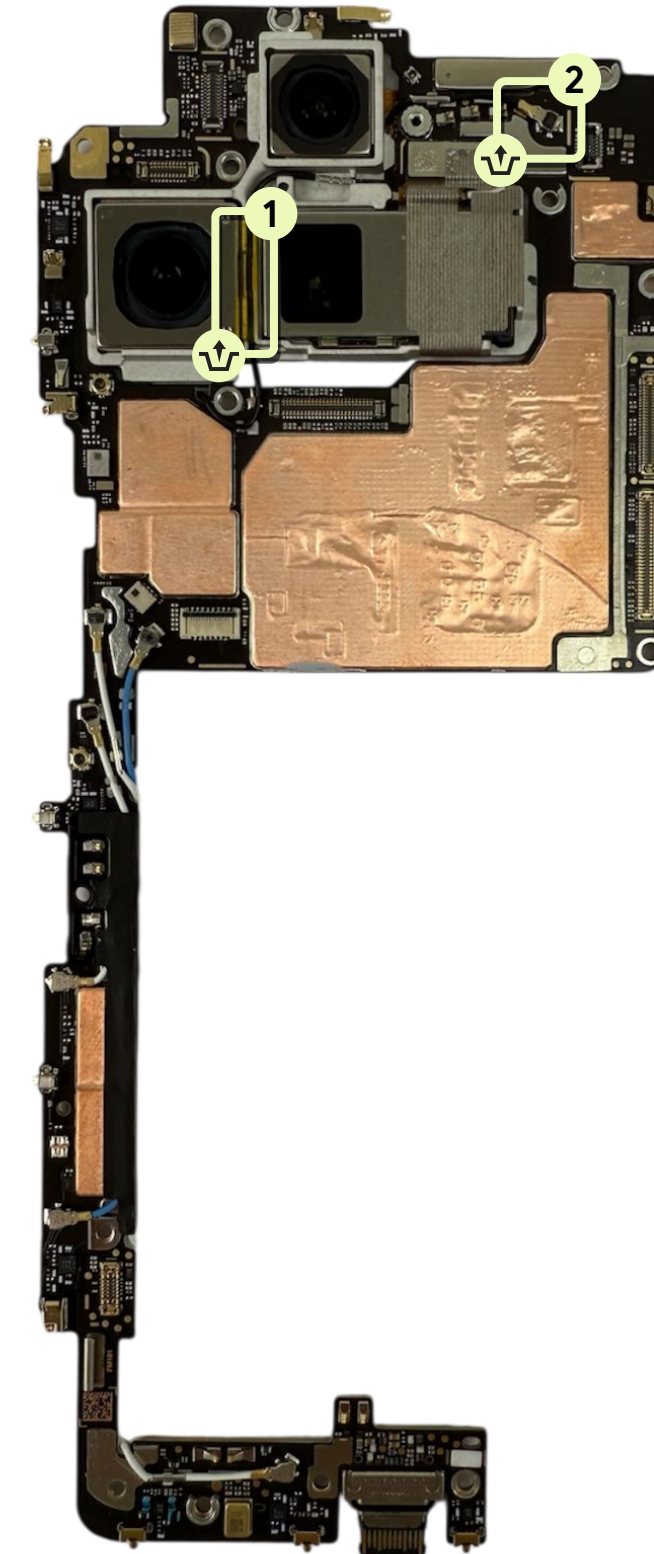

Part: G806-13991-01 (cable Kapton)

Part: G821-01179-00 (coaxial cable RCAM)

Note

Don't reuse the coaxial cable and Kapton.

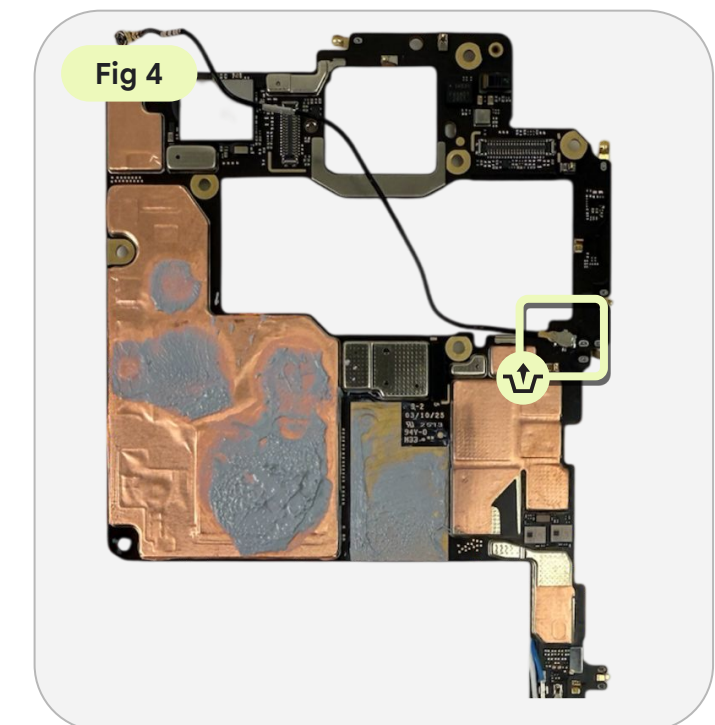

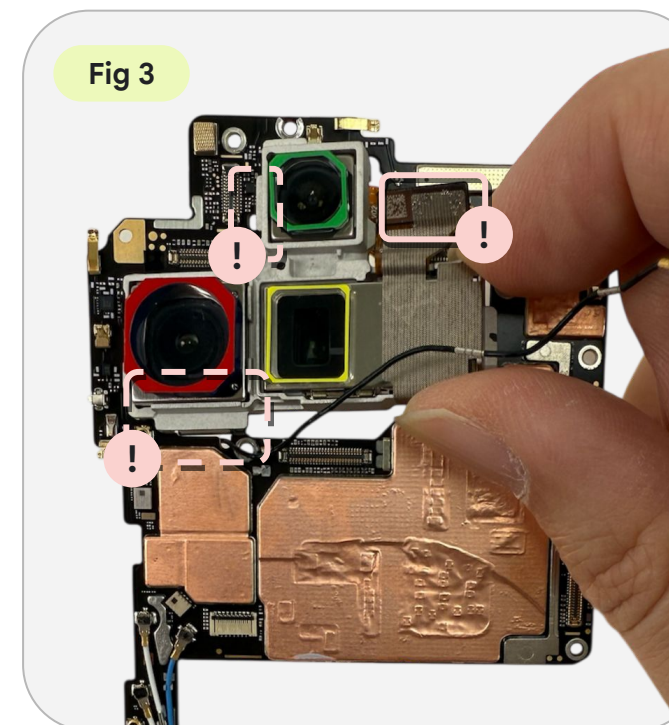

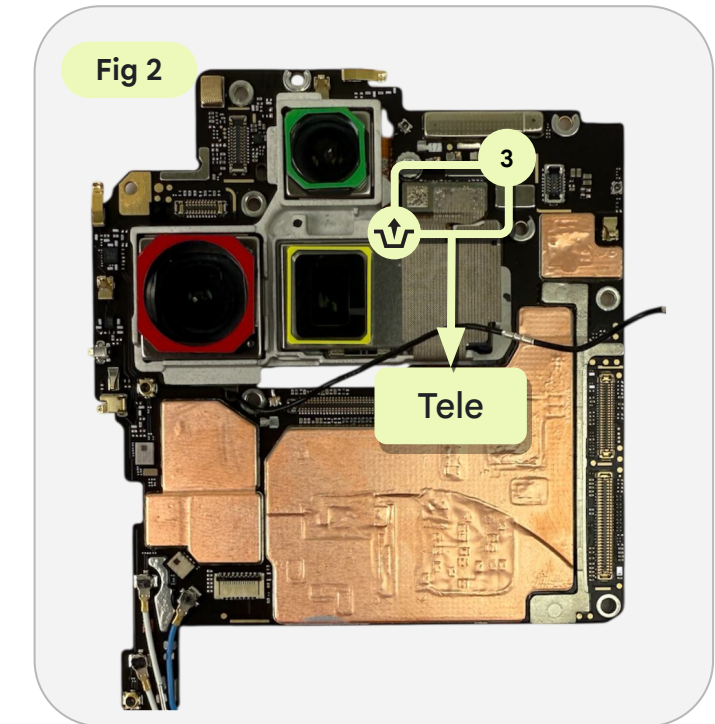

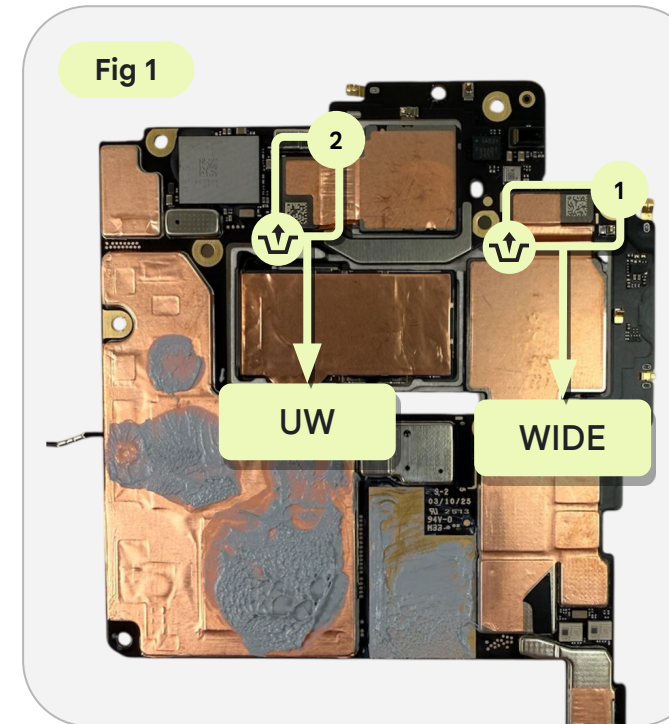

Disconnect the rear cameras

- Disconnect the **three rear camera connectors** from the **logic board** with a spudger.
- Slightly rotate the entire module counterclockwise, and remove the **rear cameras** from the **logic board** manually, as shown in **Fig 3**.
- Unlatch the **coaxial cable connector** on the other side of the logic board, as shown in **Fig 4**.

⚠ Use caution

The rear camera module has cables on both sides of the logic board.

Be cautious when you remove it to avoid damaging the springs.

Finished! Want assembly instructions? →

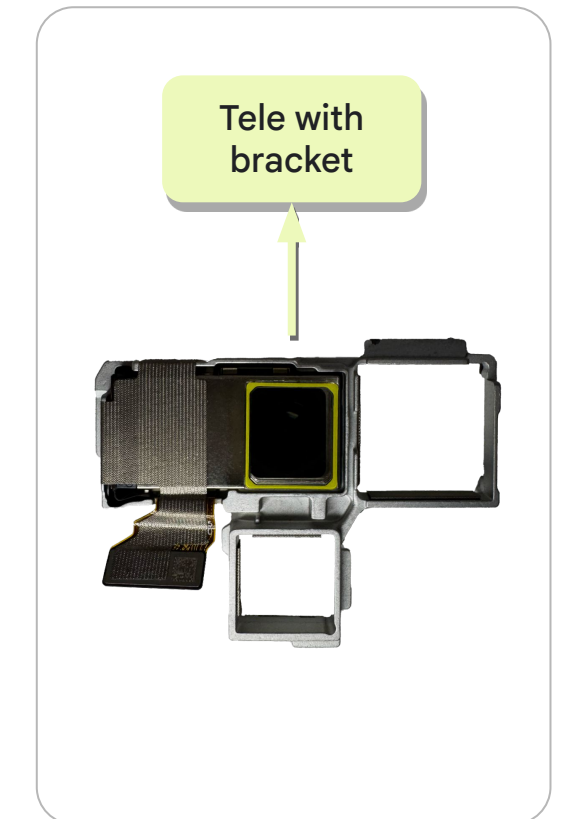

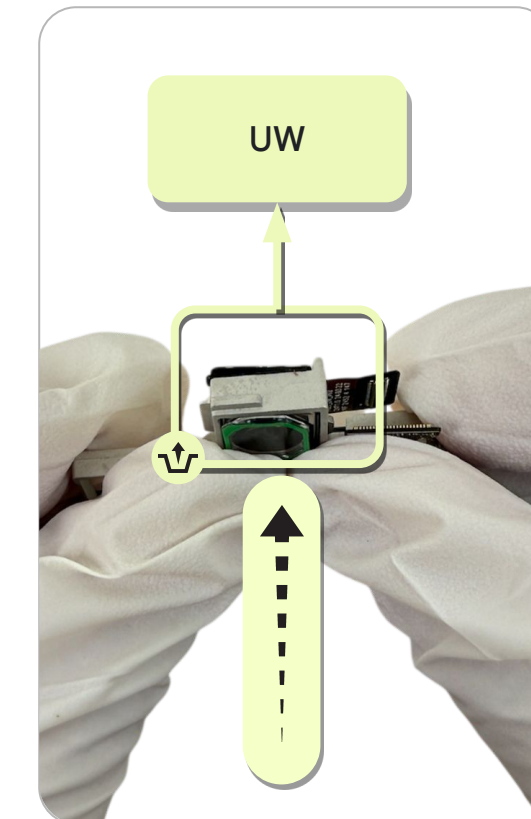

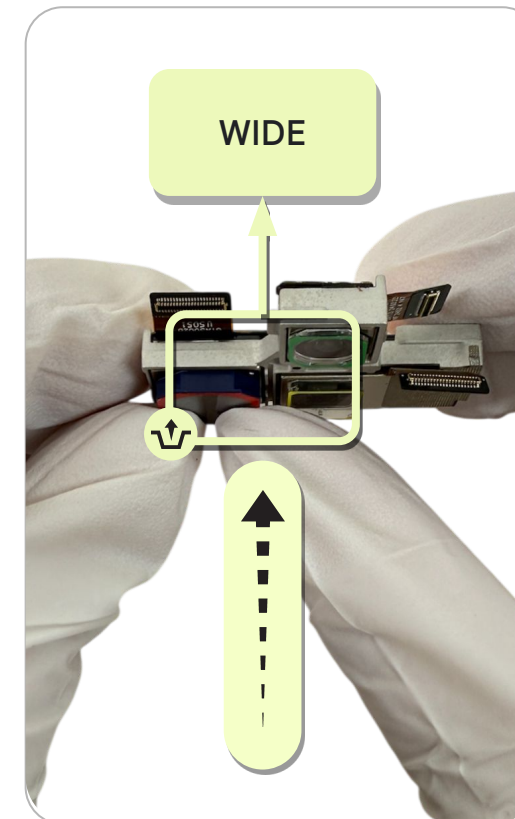

Separate the cameras

- The **rear cameras** feature a modular design. To separate the **WIDE** or **UW** cameras from the module, cover each lens with its cap and simply push from the lens side.

Part: G949-01532-00 (rear camera_UW)

Part: G949-01533-00 (rear camera_WIDE)

Part: G949-01531-00 (rear camera_tele)

Base battery

Use caution

Use caution if you engage in repair.

When you open or repair the device, be careful of electric shock, device damage, fire and personal injury risks, and other hazards.

Before you service the product, read the full set of **precautions** in this document.

Battery handling

- Never bend, dent, puncture, or use tools to pry the battery.
- Store batteries in the replacement part packaging as soon as possible after removal to prevent damage.
- If a battery begins to vent, cover it in sand or use gloves and tongs to keep the battery in a fire safe container as soon as possible.
- Take care to prevent shorting of battery terminals or damage the battery, as it could cause fire or overheating.
- Dispose of the battery according to the local regulations.

Confirm before you proceed

- The battery is fully discharged and the device is disconnected from all power sources.
- Inspect the battery to see whether the phone battery shows signs of swelling, damage, or if the phone feels hot or emits a strong odor. If so, *don't* attempt disassembly. Reach out to Google customer support instead.
- Take care not to expose the phone or its components to liquids after disassembled.

Base battery

We recommend that you use the universal disassembly fixture to hold the device during the battery removal process.

It's recommended to remove the battery with a pull jacket.

Use caution

Review all safety precautions before you begin work.

Contamination mark

Dot protrusion

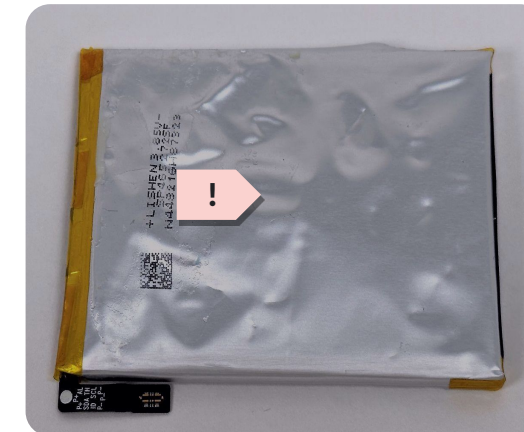

Dent

Bubbling

Imprinted line

Swelling or electrolyte leakage

*These are examples of potentially dangerous battery conditions but *don't* reflect all possible dangerous conditions. Follow the general safety guidance outlined in this document.

Unstick the pull jacket

- Use a pair of blunt nose tweezers or your fingers to peel the pull jacket away from the battery, as shown in **Fig 1**.
- The part of the pull jacket is folded under the green tabs. Unfold and pack them to cover partial of green tab by **masking tape (size: 10mm * 20mm)** to strengthen handling, as shown in **Fig 2** and **Fig 3**.

Use caution

Avoid use of sharp objects or tools to prevent damage to the **battery**.

Soften the glue

Place the unfolded device with the ID face down on the heat plate set to **158 °F (70 °C)** for 10 minutes to soften the **base battery** adhesive.

⚠ Use caution

A heat plate is a hot surface. Use caution as it could cause burns.

⚠ Use caution

Use safety gloves to handle damaged displays as they could splinter during removal and cause injury. Apply protective liner to broken glass before removal.

Review all **safety precautions** before you begin work.

Adjust the pull jacket

- Secure the fixture on the working surface.
- Fold the device, and secure it on the fixture.
- Wear ESD finger cots to increase friction to prevent slipping.
- Move the **pull jacket** back and forth to scrape the bottom PSA entirely, *don't* over the yellow dot line.

Note

If the pull jacket breaks, **insert a new flip pull jacket (G806-14434-00)** through the opening on the lower side of the base battery and reheat the device 3 minutes if it feels cooled down.

Finished! Want assembly instructions? →

Remove the battery

- Grip the **pull jacket** with your fingers and pull straight up with steady force to separate the adhesive under the **base battery**.
- Gently remove the **base battery** and store it safely.

Part: multiple part numbers (base battery)

Use caution

Lift the battery as soon as the device leaves the heat plate before the adhesive cures.

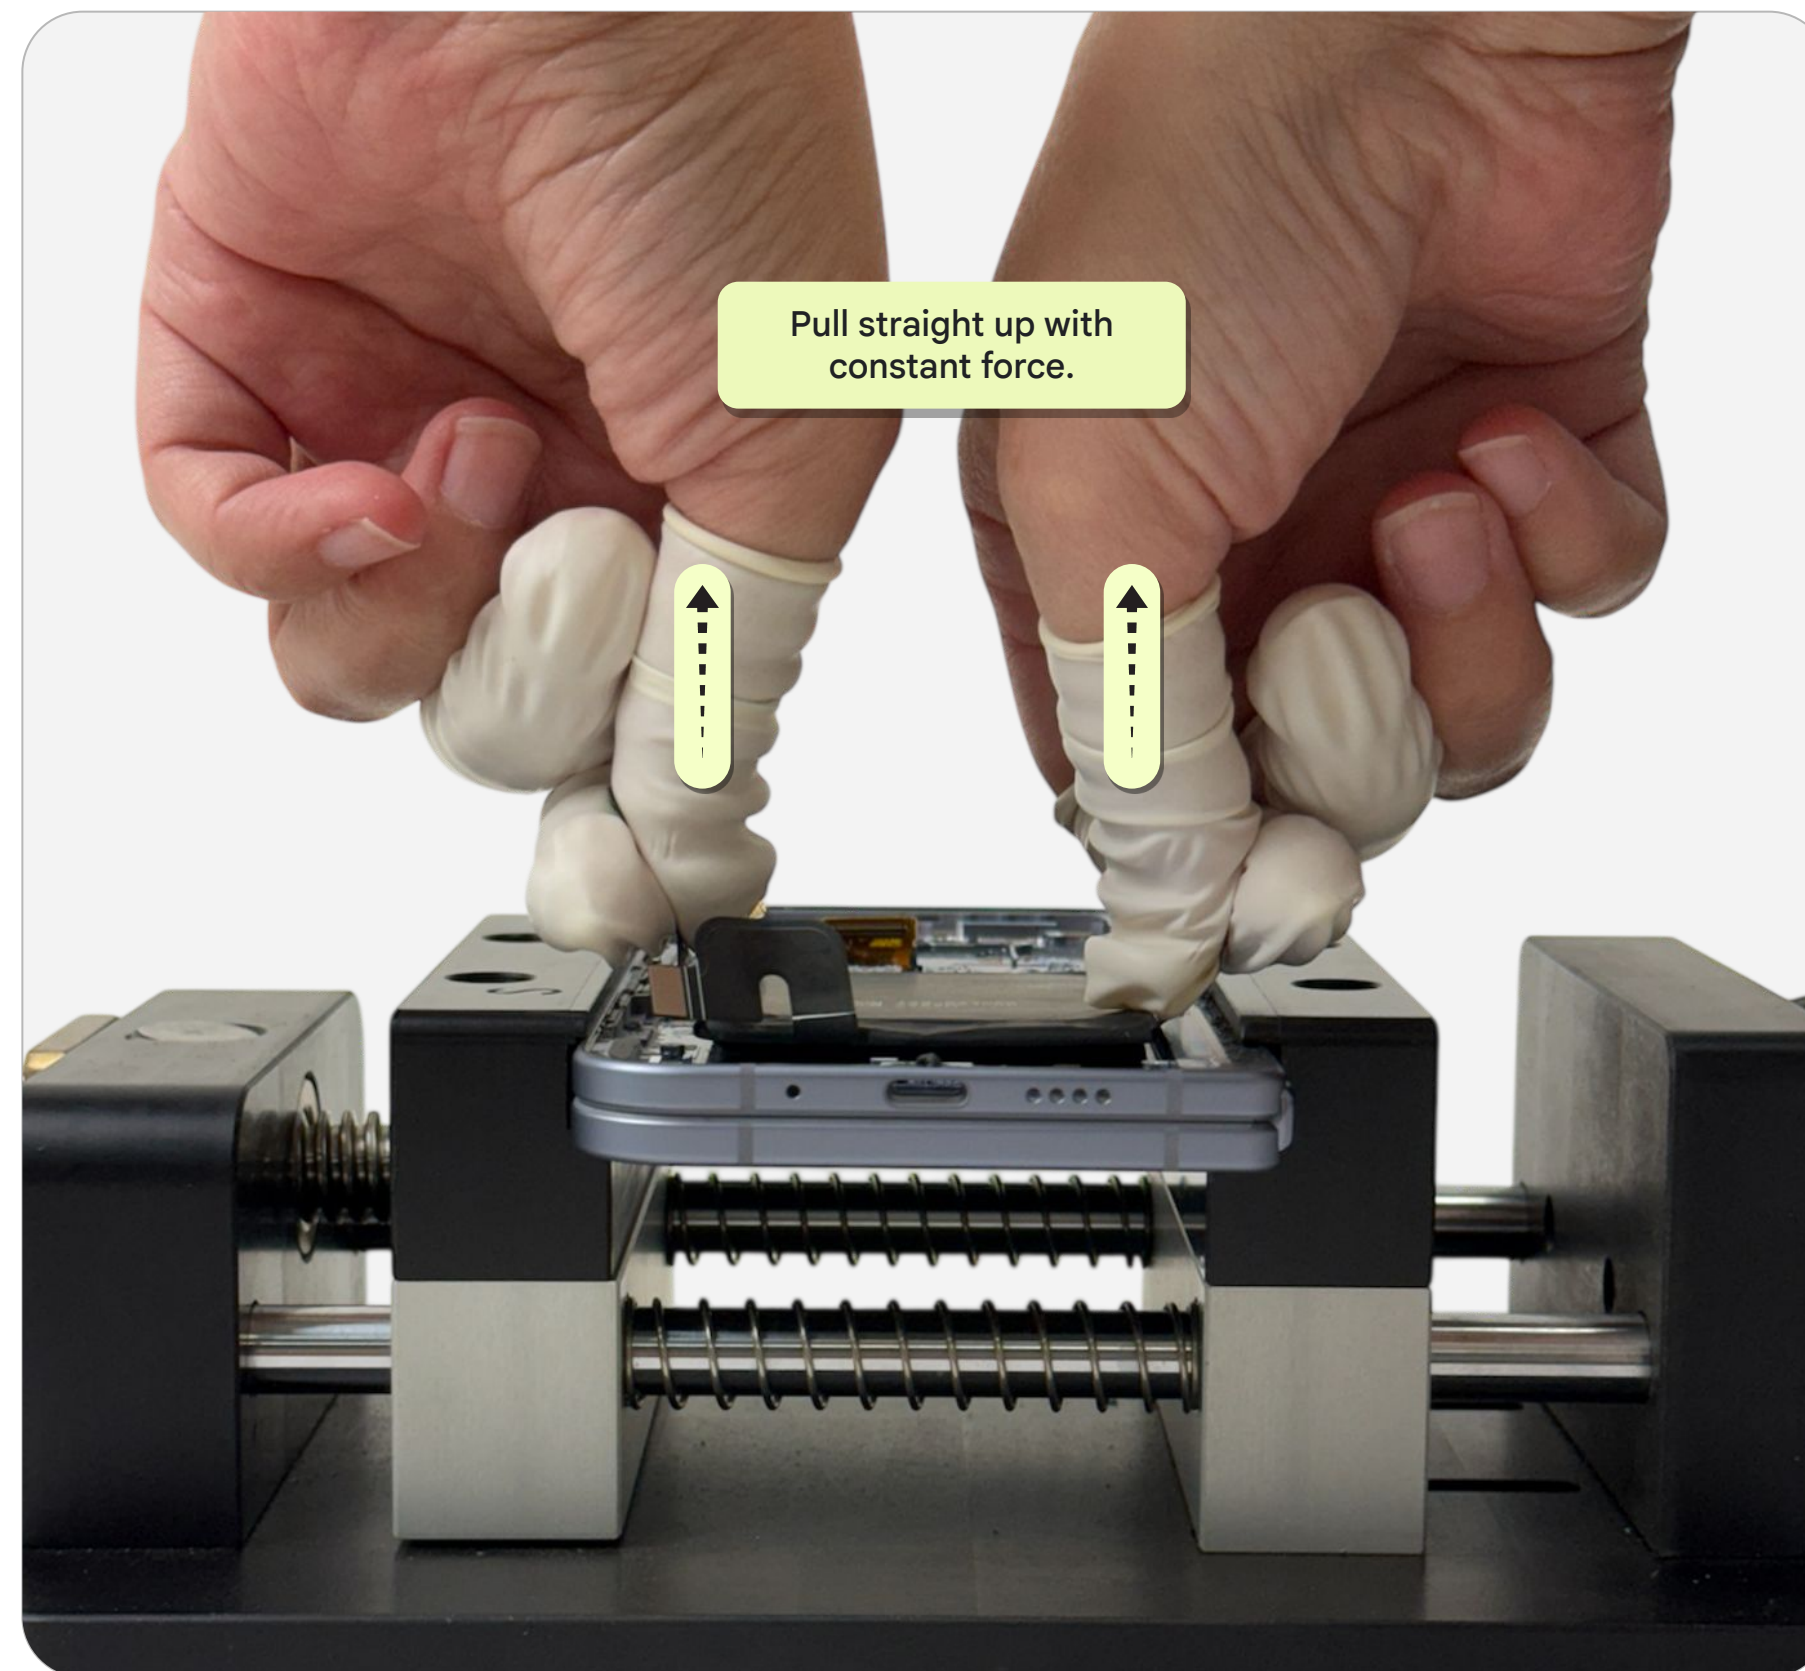

keep small screws and sharp objects away from the battery.

Don't reuse the part.

Note

Wear finger cots to increase friction.

ID (inner display) sub

Base side

If you reuse the ID sub, verify that any thermal paste or adhesive residue is completely removed.

Use caution

Review all safety precautions before you begin work.

Prerequisites

Here's the list of components that you should remove first:

- **BG sub**
- **Vibrator with cowling**
- **mmWave module**
- **Inner front camera**
- **Bottom speaker**
- **Logic board**
- **Base battery**

Tools

Torx plus 3IP screwdriver
Tweezers
Spudger
Dust-free cotton swabs
IPA and cloth

Required parts

Reuse indications

Reusable without you clean

Reusable after you clean

Not reusable after disassembly

Inner display sub (base side)

If you reuse the enclosure, verify that any thermal paste or adhesive residue is completely removed.

Reuse indications

Reusable without you clean

Reusable after you clean

Not reusable after disassembly

Remove the FPS support

- Remove the **two FPS support screws** with a torx plus 3IP screwdriver, as shown in **Fig 1**.
- Push the **FPS support** inward with the flat end of a spudger, as shown in **Fig 2**.
- Gently pry up and remove the **FPS spacer-1** and the **FPS spacer-2** with **tweezers**, as shown in **Fig 3**.

Part: G250-06986-00*2 (screw)

Part: G730-09651-01 (FPS support)

Part: G730-09645-01 (FPS spacer-1)

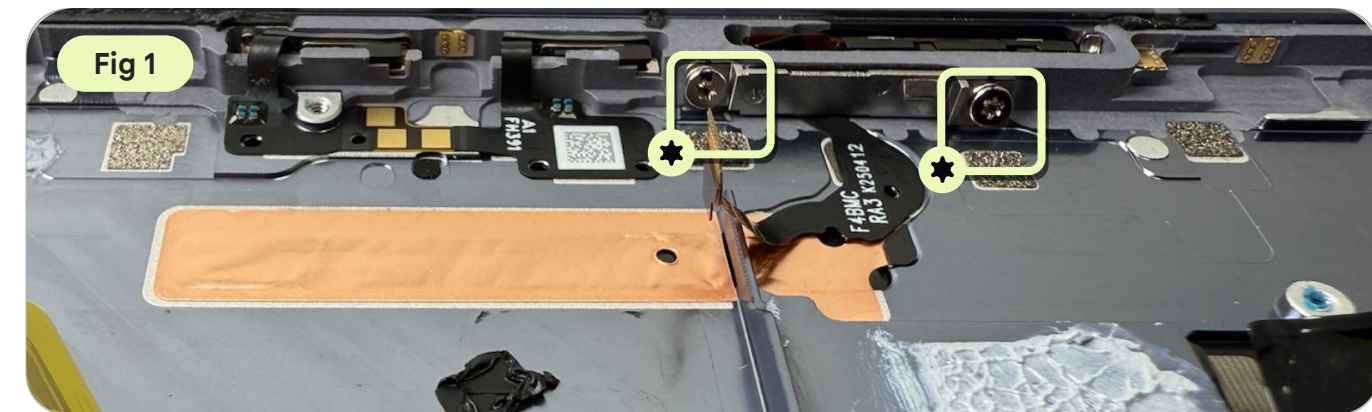

Part: G852-05081-01 (FPS spacer-2)

Note

Don't reuse the screw and the FPS support.

The inner display sub includes the FPS. **Only perform this and the next step if the FPS is damaged.**

Remove the FPS (power button)

- Push the FPS inward, as shown in **Fig 1** and push the FPS outward to remove the FPS module, as shown in **Fig 2**.
- Pull out the FPS module, as shown in **Fig 3** and release the FPS FPC slowly, as shown in **Fig 4**.

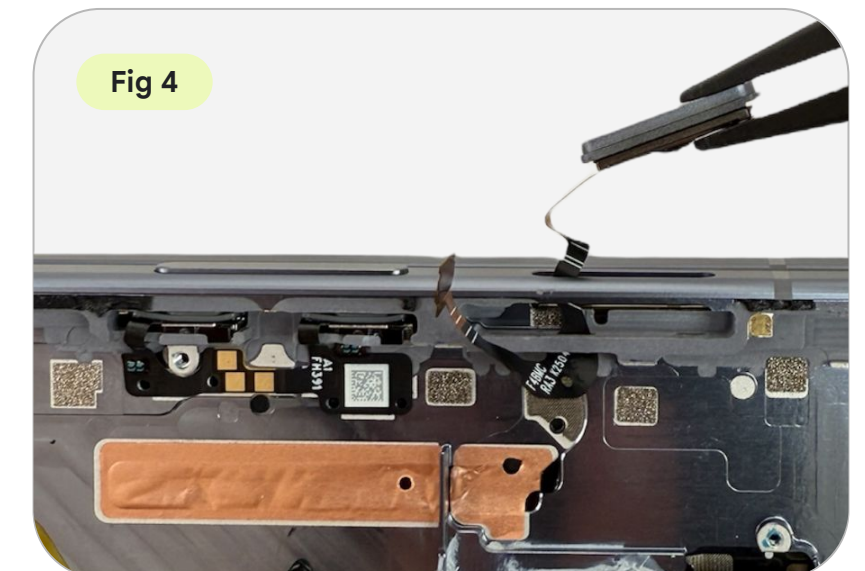

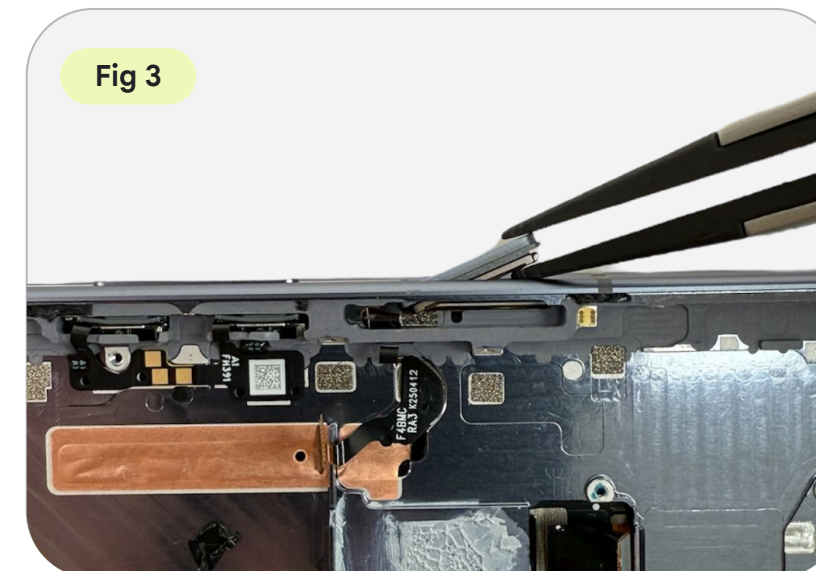

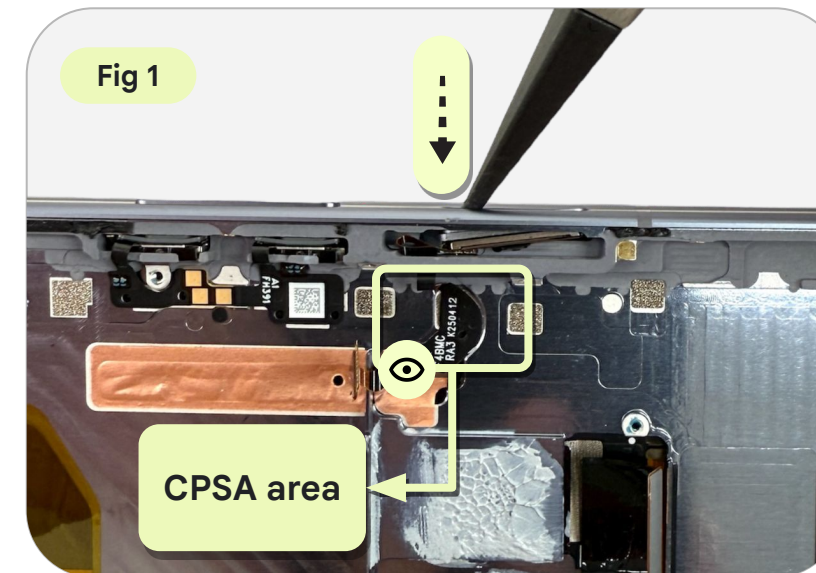

Part: multiple part numbers (FPS)

Note

Don't reuse the part.

The inner display sub includes the FPS. **Only perform this step if the FPS is damaged.**

Finished! Want assembly instructions? →

Remove the sidekey

- Release the sidekey FPC from the enclosure, as shown in **Fig 1**.
- Gently pull upward on the FPC to remove the **sidekey module**, as shown in **Fig 2**.
- Remove **two VOL spacers** from the enclosure slot, as shown in **Fig 3**.

Part: G949-01541-00 (sidekey module)

Part: G852-05079-01*2 (VOL spacer)

Note

Don't reuse the part.

The inner display sub includes the sidekey. **Only perform this step if the sidekey is damaged.**

Assembly
instructions

ID (inner display) sub Base side

Replace the VOL and FPS CPSA

- Use a **spudger** to remove remaining adhesive from the **enclosure**. Clean with a **dust-free cloth** and **IPA**, as shown in **Fig 1**.
- Apply the **FPS CPSA**, **VOL top and bottom CPSA** to the designated position, as shown in **Fig 2**.
- Use a **spudger** to firmly press over the CPSA, to ensure strong adhesion.

Part: G806-13929-00 (FPS flex CPSA)

Part: G806-13930-00 (VOL CPSA_top)

Part: G806-13931-00 (VOL CPSA_bottom)

Note

Don't remove the release liner yet.

Fig 1

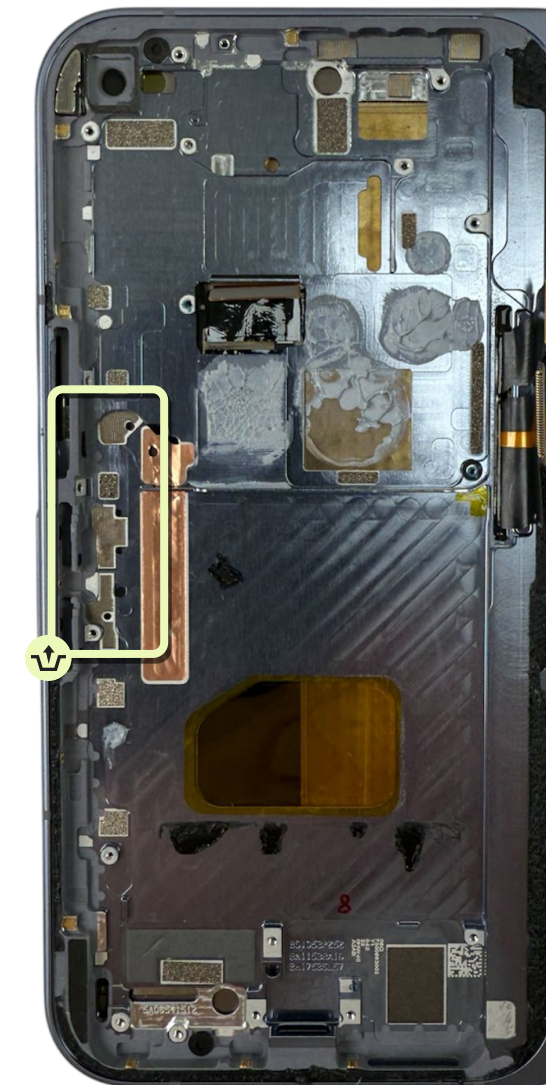

Fig 2

A: G806-13929-00

B: G806-13930-00

C: G806-13931-00

Assemble the FPS (power button)

- Fold the flex and insert the FPS flex from the slot through the middle frame, as shown in **Fig 1**.
- Push the button outward. Install the FPS spacer-1 and FPS spacer-2 into the slot of the middle frame with tweezers, as shown in **Fig 2**.

Part: multiple part numbers (FPS)

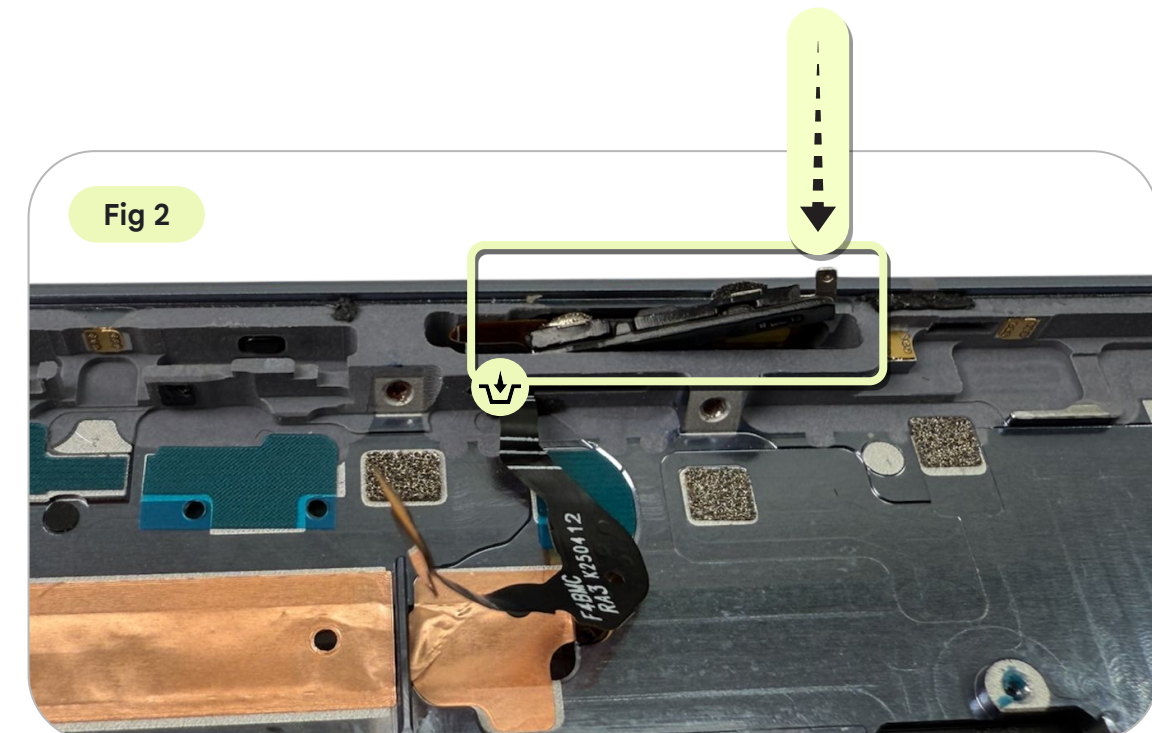

Part: G730-09645-01 (FPS spacer-1)

Part: G852-05081-01 (FPS spacer-2)

Note

The inner display sub includes the FPS and the sidekey. Only perform this and the next three steps if the FPS and the sidekey is damaged.

Assemble the FPS (power button)

- Tear off the two blue liners, as shown in **Fig 1**.
- Align the fixing hole and make sure that the white line is aligned with the shell, as shown in **Fig 2**.
- Assemble the FPS support to the designated position, as shown in **Fig 3**.
- Tighten the **screws** with the **torx plus (3IP) screwdriver** in a sequence.

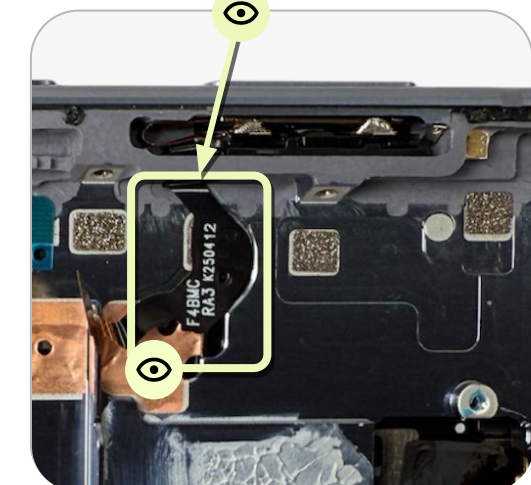

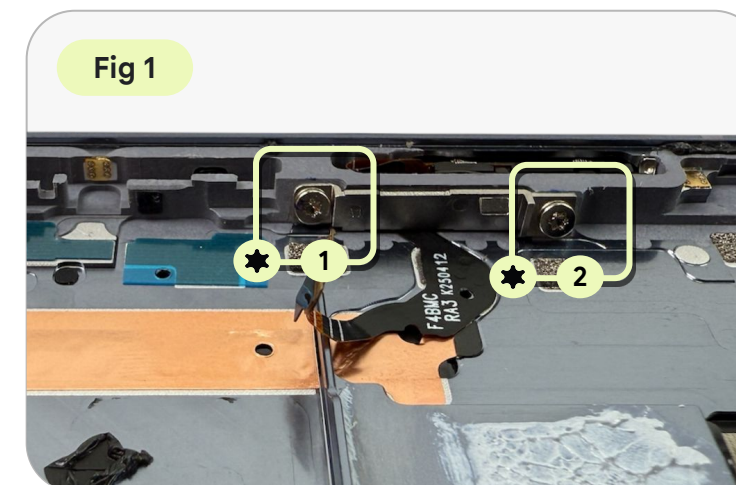

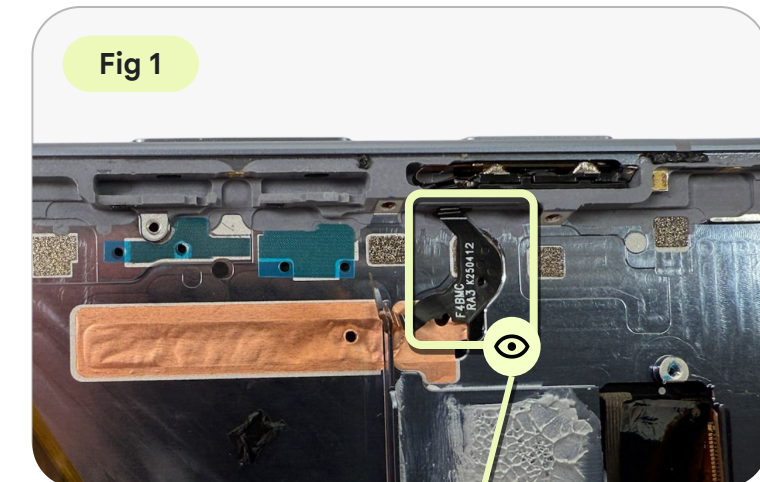

Part: G730-09651-01 (FPS support)

Part: G250-06986-00*2 (screw)

Note

The inner display sub includes the FPS and the sidekey. Only perform this and the next three steps if the FPS and the sidekey are damaged.

Assemble the sidekey

- Tear off the two blue liners, as shown in **Fig 1**.
- Install the sidekey FPC to the middle frame and align the fixing holes, as shown in **Fig 2**.
- Insert the **VOL spacer** into the gap to fix the volume button, as shown in **Fig 3**.
- Push downward to fix the **VOL spacer** to the designated position, as shown in **Fig 4**.

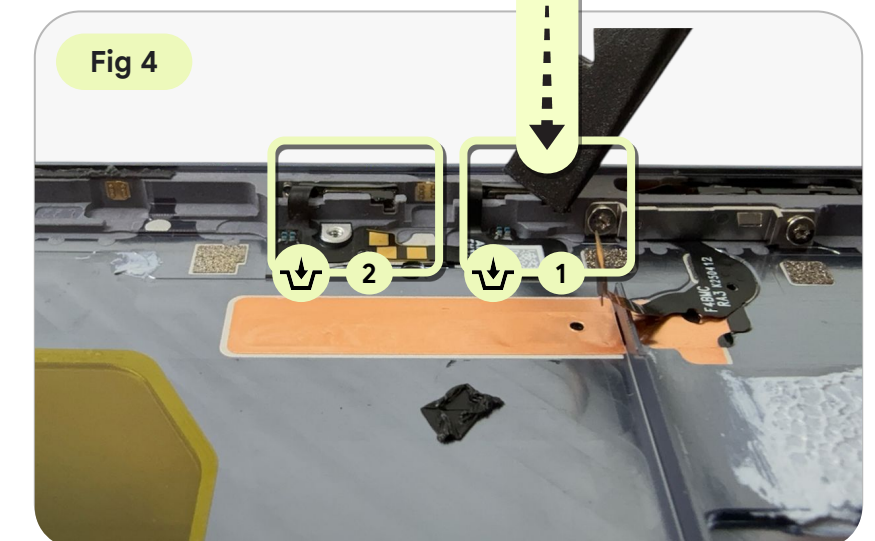

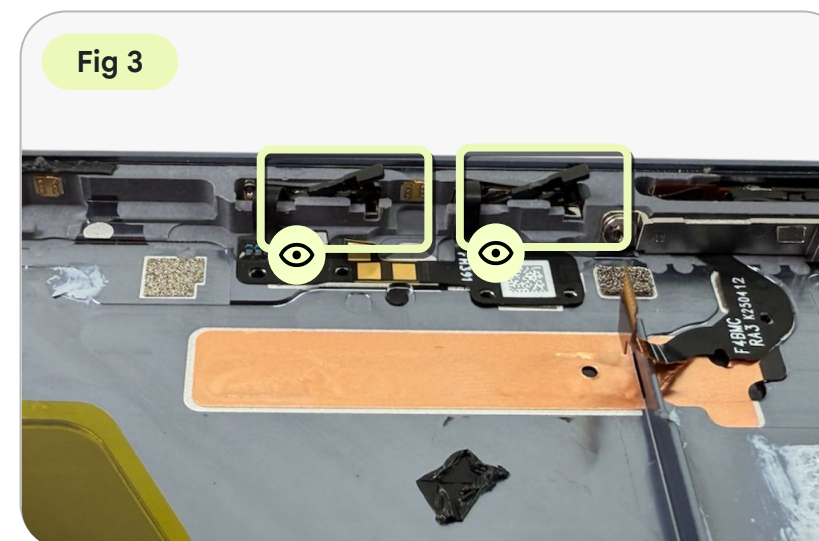

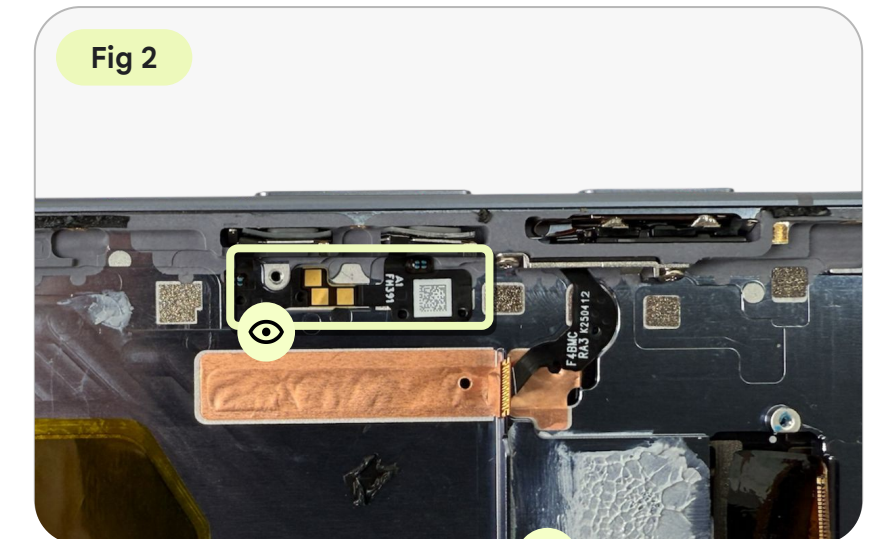

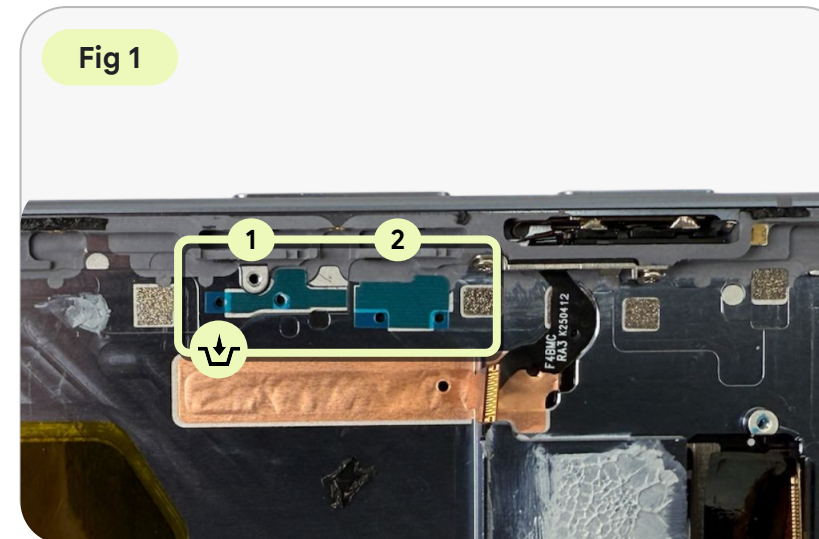

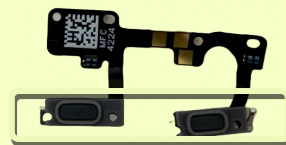

Part: G949-01541-00 (sidekey)

Part: G852-05079-01 *2 (VOL spacer)

Note

Clean the rubber surface with dust-free cotton swabs before installation.

Reuse the ID sub or use new ID sub

- Use a **spudger** to remove remaining adhesive from the **enclosure**. Remove large chunks with fingers or **tweezers**. Clean with a **dust-free cloth** and **IPA**.
- Scrape **thermal grease** from enclosure areas with a spudger's flat end. Gently clean residue with a **cloth**.
- Remove **masking tapes** (no. 1 to 4) and the **wrap** on the **hinge** from the **base enclosure** for the new ID sub. Fold the liner of inner FCAM (no. 5) in advance to avoid interference with logic board assembling.

Part: G806-13943-00 (inner FCAM foam)

Use caution

Don't get conductive thermal grease on other components.

Don't use IPA to clean thermal grease.

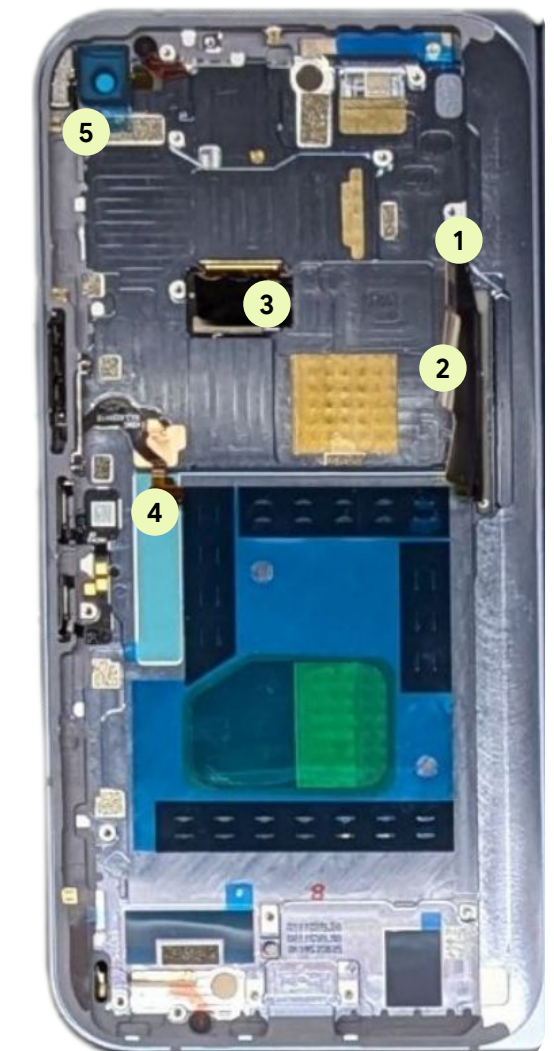

Note

If the inner FCAM PSA sponge is damaged or broken, replace it with a new one.

Paste the PSA sponge along the upper left corner as shown in figure.

Reuse ID sub

New ID sub

Clean off the thermal grease

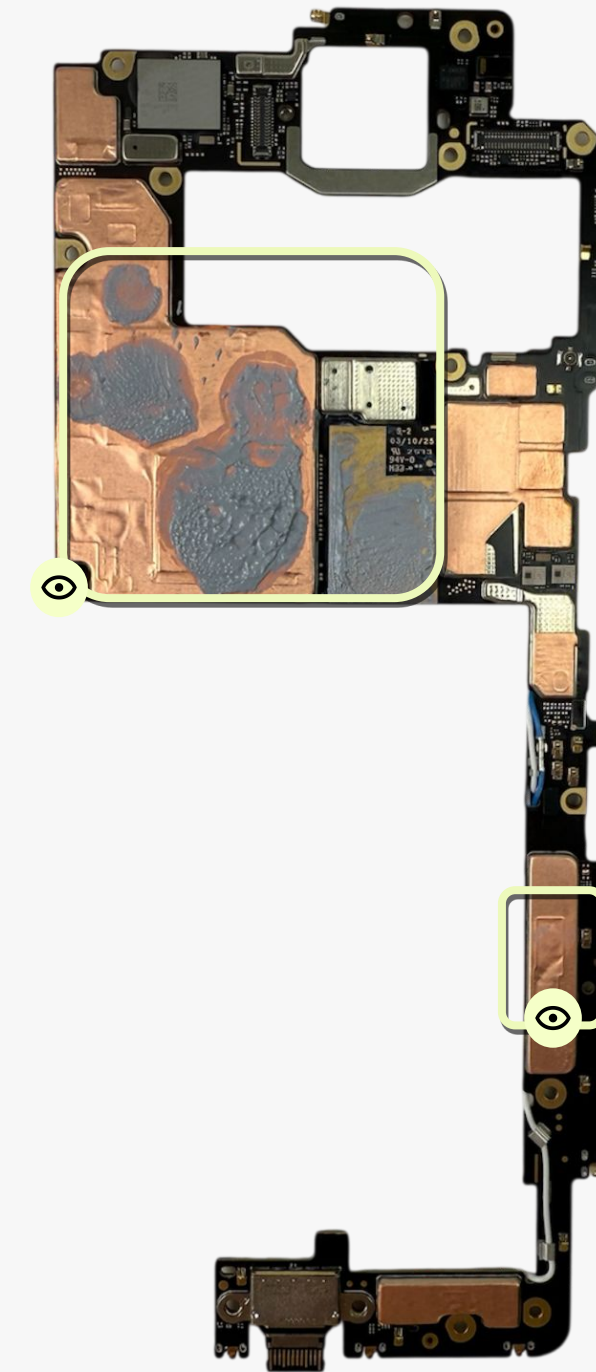

- Use the flat end of a spudger to scrape away the old thermal grease from the **logic board**.
- For any residue, gently clean the surface with a dust-free cloth.

Use caution

Don't get conductive thermal grease on other components.

Don't use IPA.

Clean the base battery PSA residue

- Use a spudger's flat end to scrape up residue from the base battery area.
- Remove large adhesive chunks with your fingers or tweezers, then repeat for any remaining adhesive.
- Clean the base battery area with a dust-free cloth and IPA.

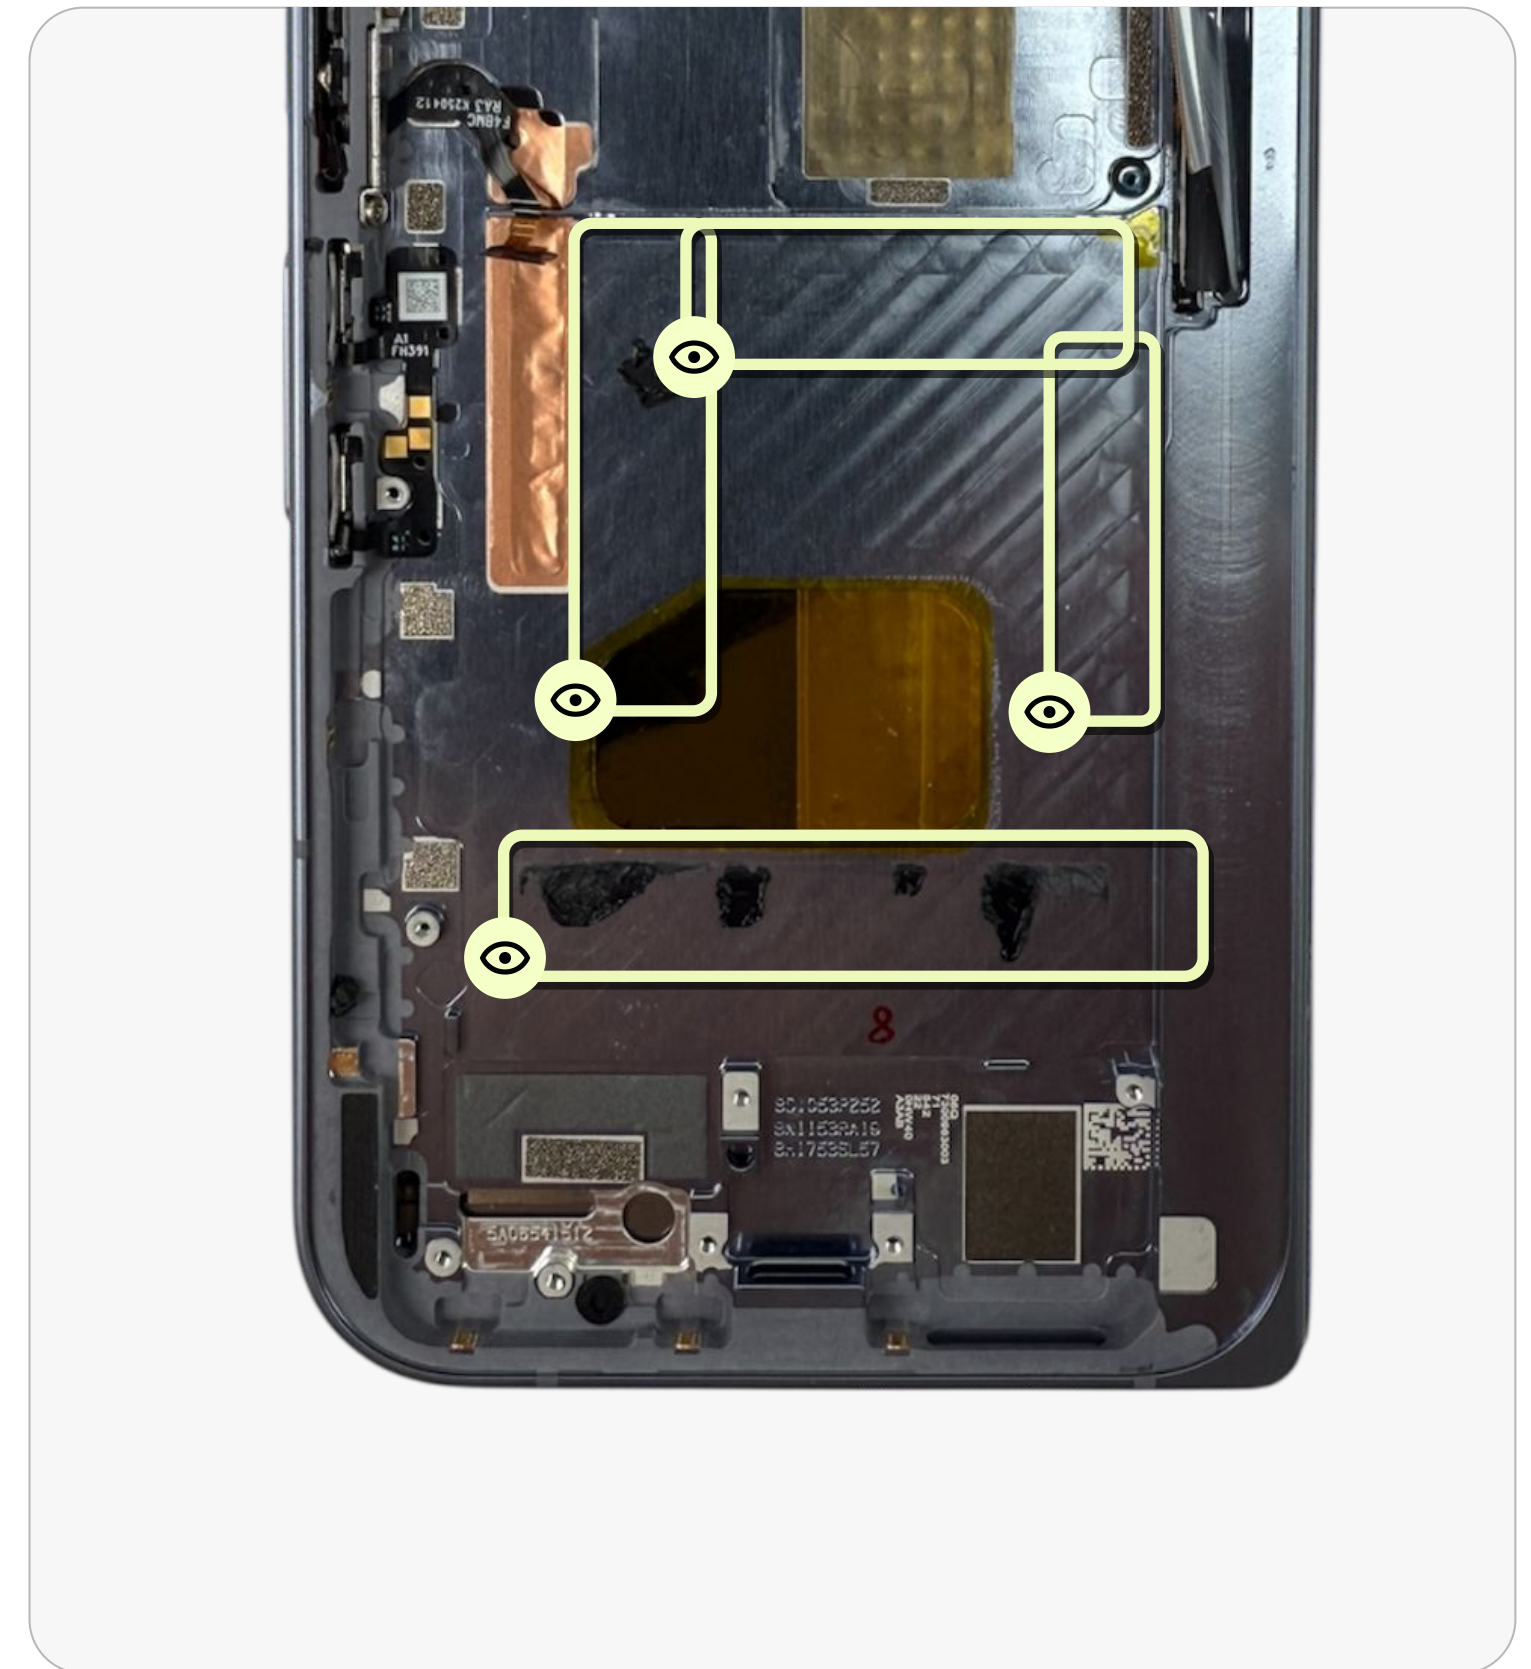

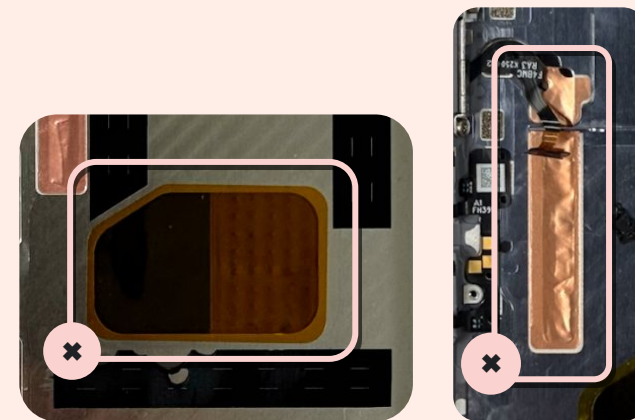

Note

The inner display subassembly includes the base battery PSA. Perform this step only when you reuse the inner display subassembly.

Use caution

Don't damage the Kapton and copper foil when you remove the residual PSAs.

Replace the base battery PSA

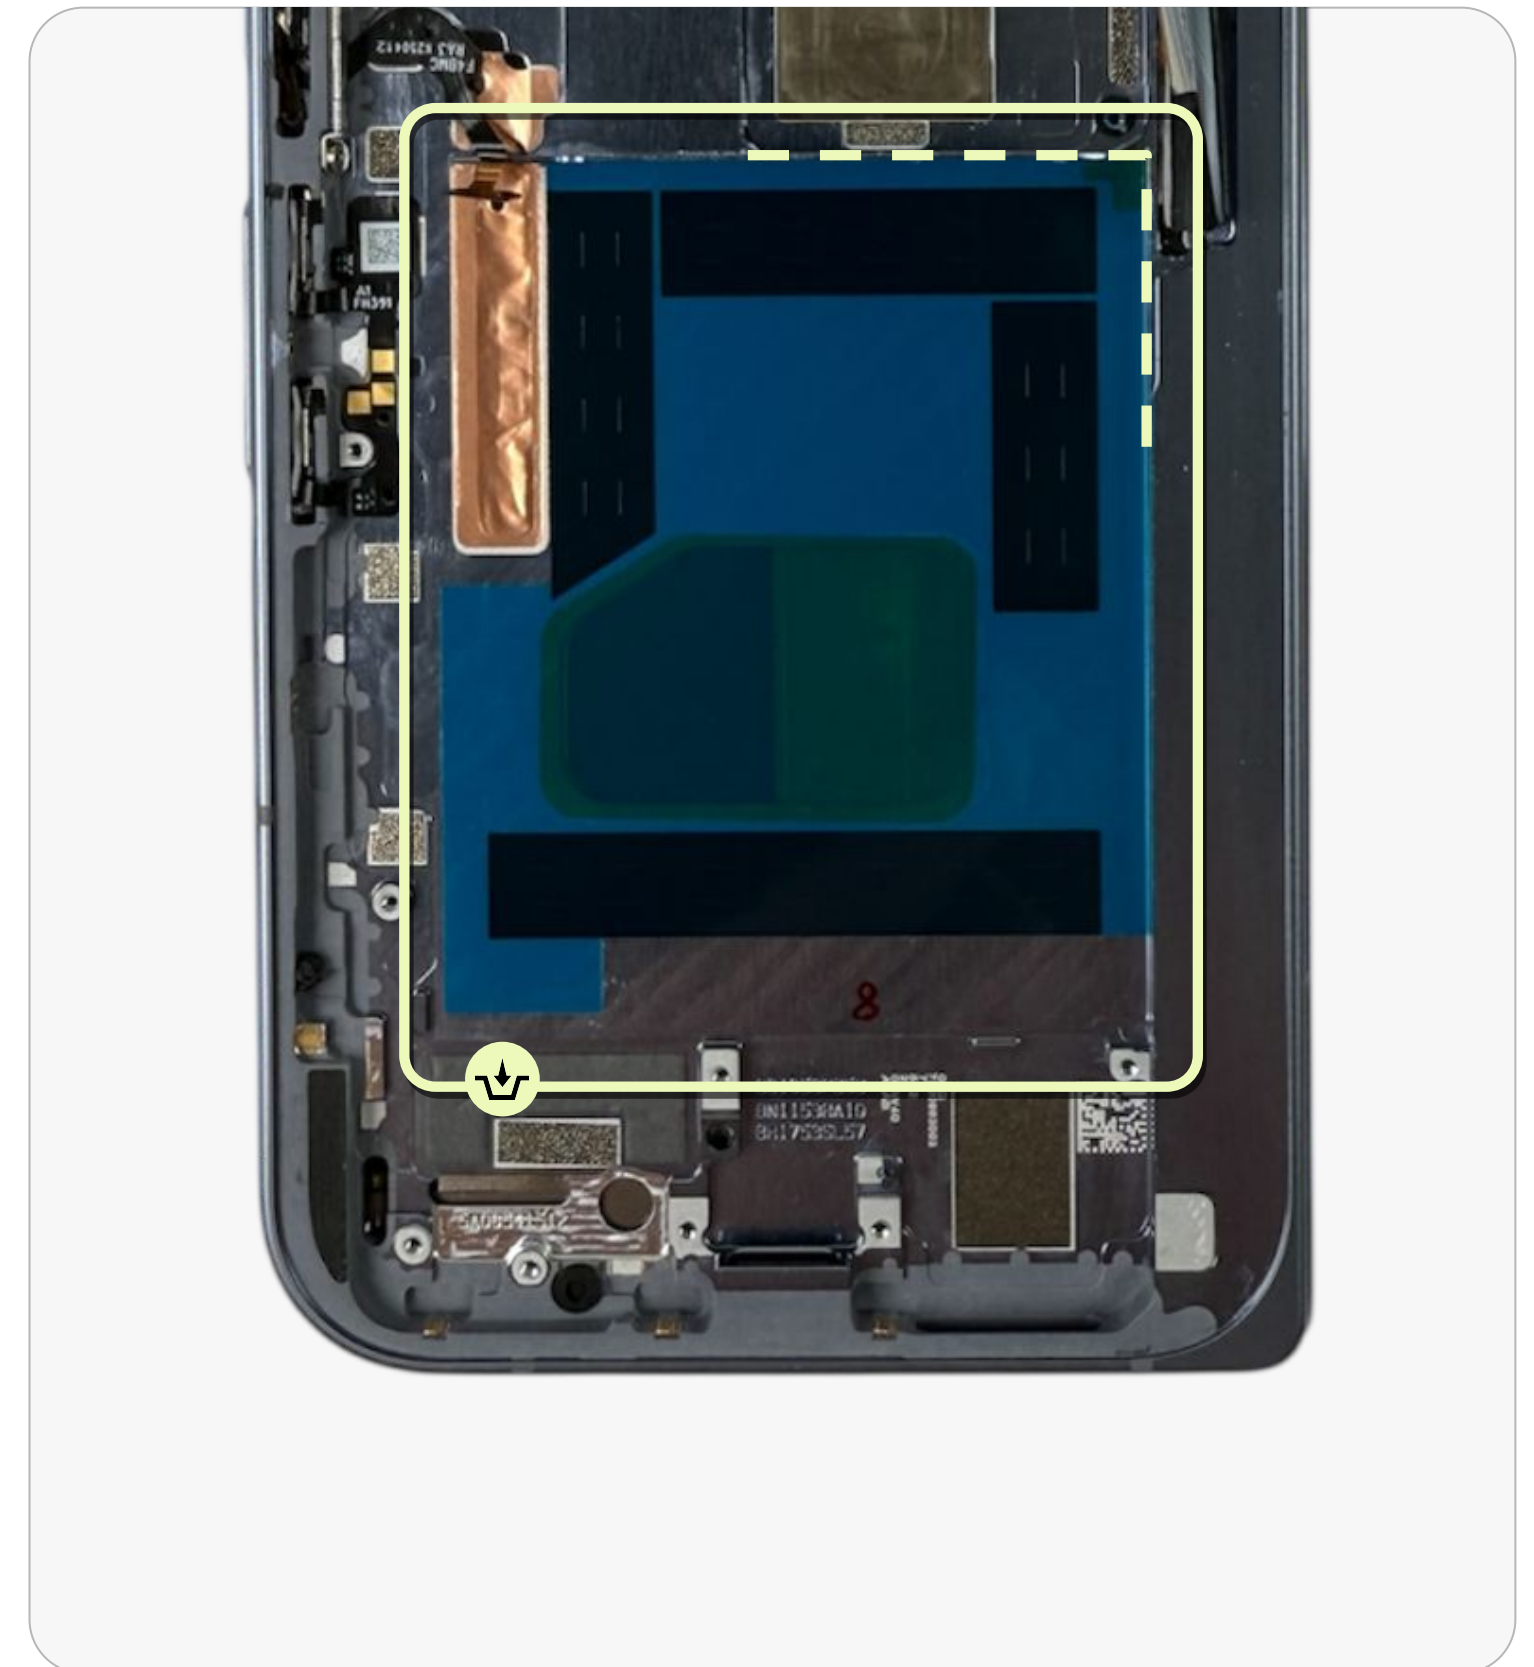

- Apply the **base battery PSA** to the recess in the upper right corner.
- Use a **spudger** to firmly press over the PSA, to ensure strong adhesion.

Part: G806-15394-00 (base battery PSA)

Note

Don't remove the release liner yet.

Paste the mic 1 and mic 3 meshes

- Remove damaged mic 1 and mic 3 meshes.
- Wrap a spudger with a dust-free cloth. Dip it in IPA and clean up any residue.
- Attach new meshes to the designated position.

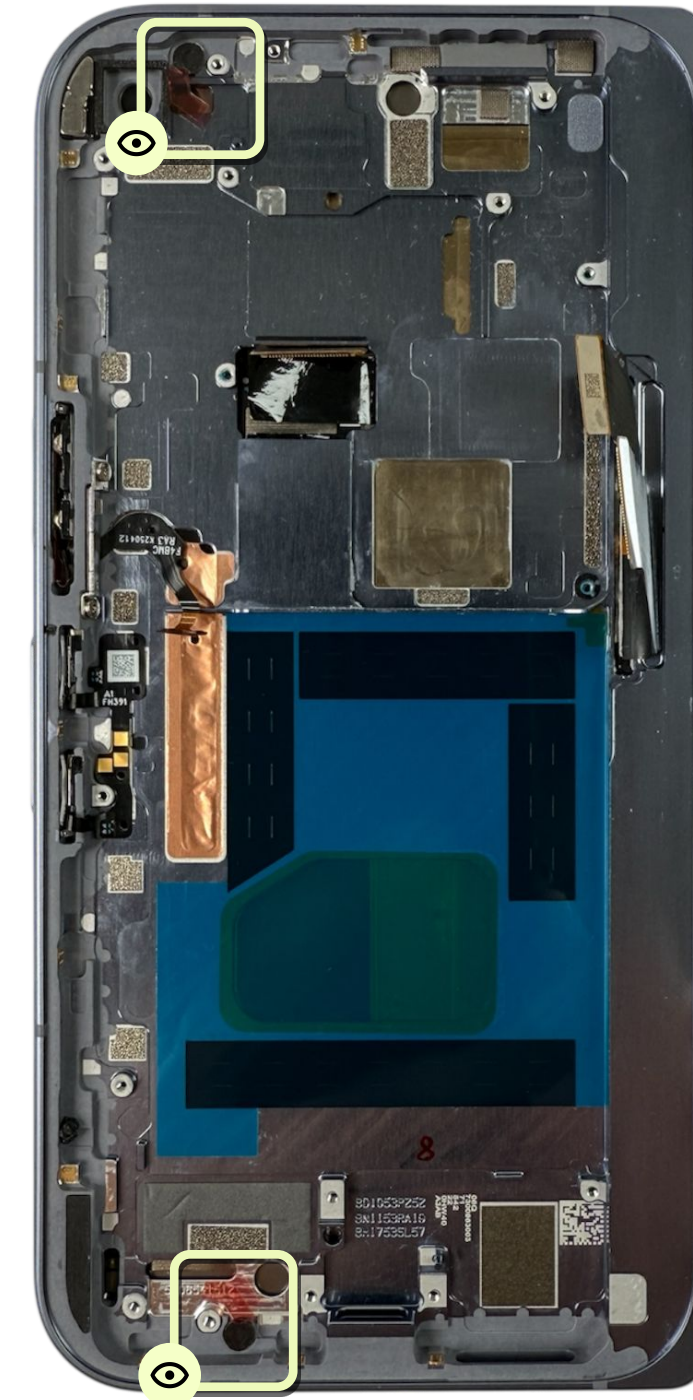

Part: G806-14011-00 *2 (mic mesh)

Use caution

Check the two meshes and replace them if they're damaged.

Make sure that the environment is clean for this process.

 Assembly
instructions

Rear camera

Assemble the rear cameras

- The rear cameras have a modular design. When you use a new **tele camera module**, remove the 2 blue liners.

Part: G949-01531-00 (rear camera_tele)

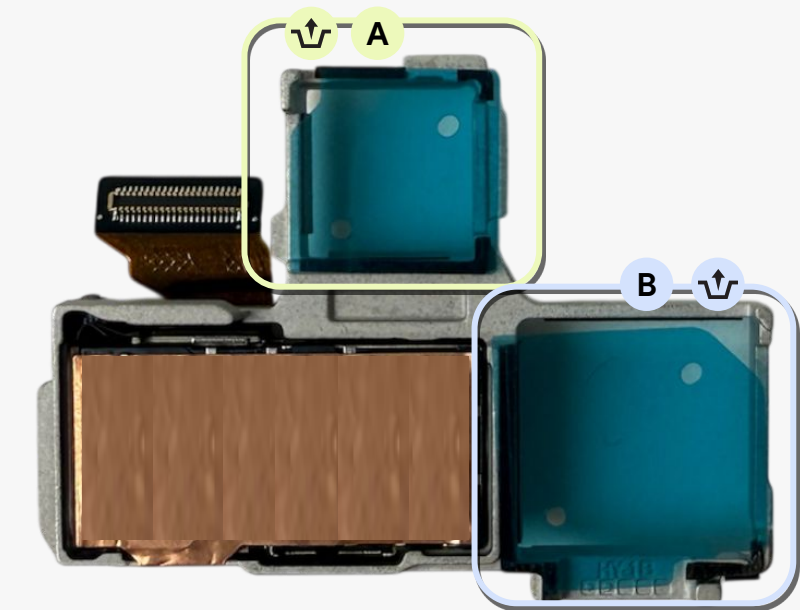

Part: G806-13993-02 (UW cam bracket PSA)

Part: G806-13994-01 (WIDE cam bracket PSA)

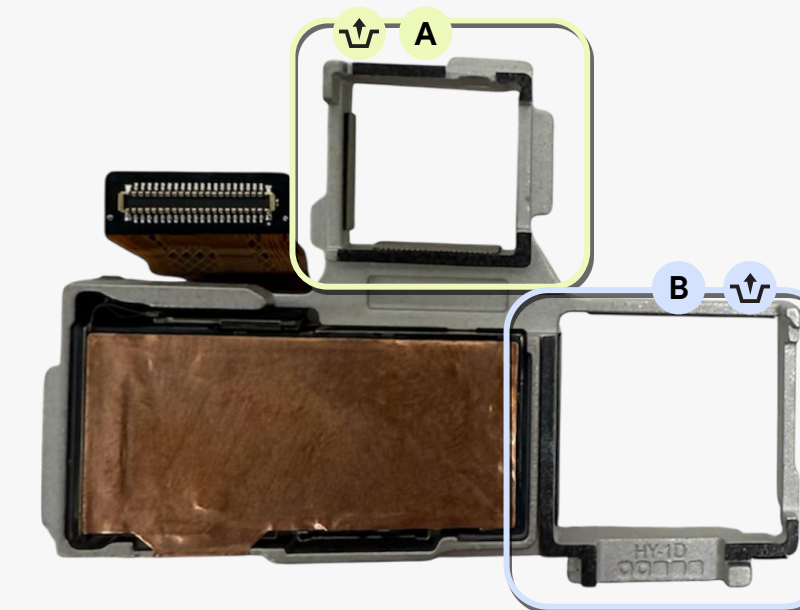

Note

Replace the PSAs on the frame if they're damaged.

A: G806-13993-02

B: G806-13994-01

Install the coaxial cable

- Turn the logic board to the back side, and latch the coaxial cable tip.
- Run the cable through the recess under the rear camera cutout and onto the front side.

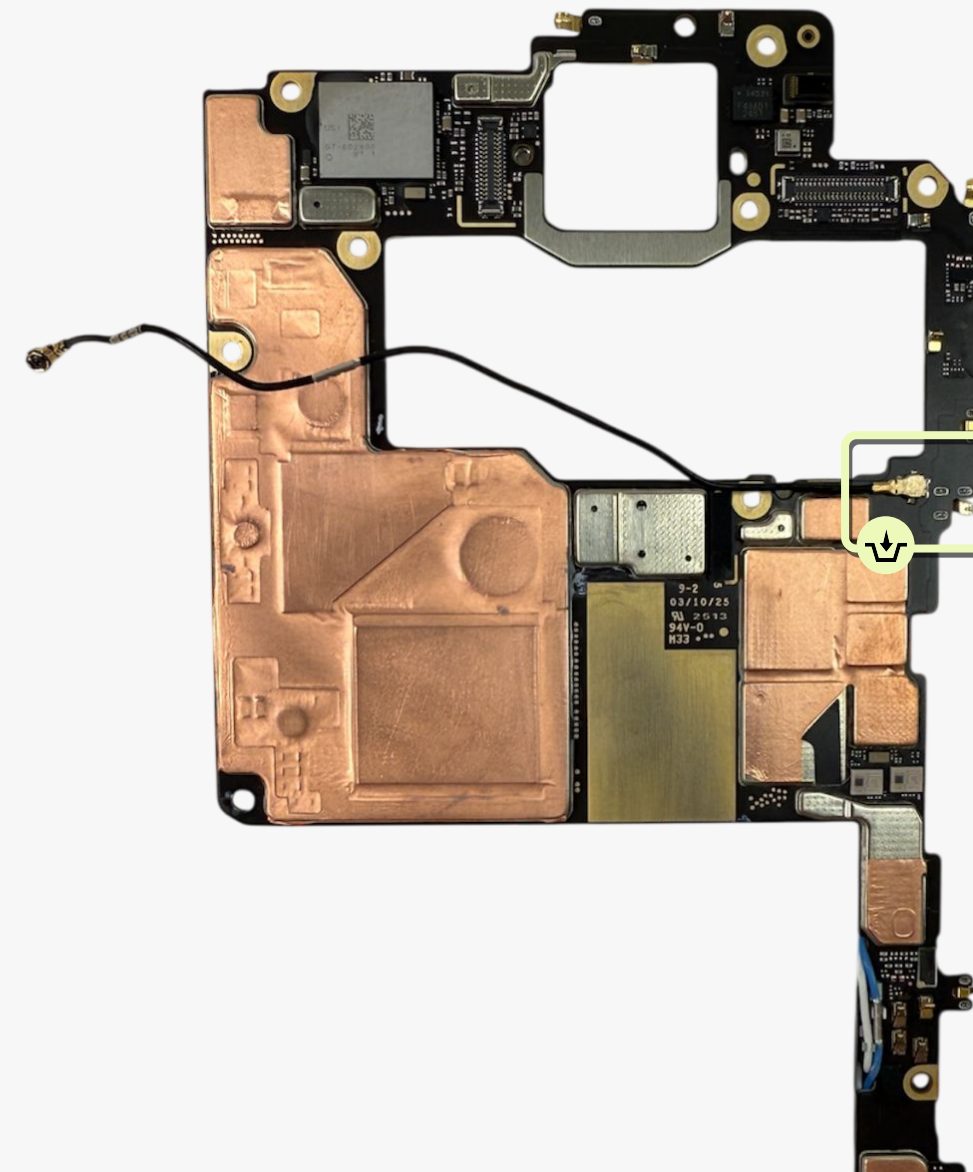

Part: G821-01179-00 (coaxial cable RCAM)

Note

The logic board includes the coaxial cable.

Perform this step only if the cable is unlatched.

Connect the rear cameras

- Install the **rear camera_tele** to the **logic board**, as shown in **Fig 1**.
- Install the **rear camera_WIDE** and **rear camera_UW** to the **logic board** and attach the connectors, as shown in **Fig 2**.
- Attach **rear camera_tele** connector to the **logic board** in **Fig 3**.

Part: G949-01532-00 (rear camera_UW)

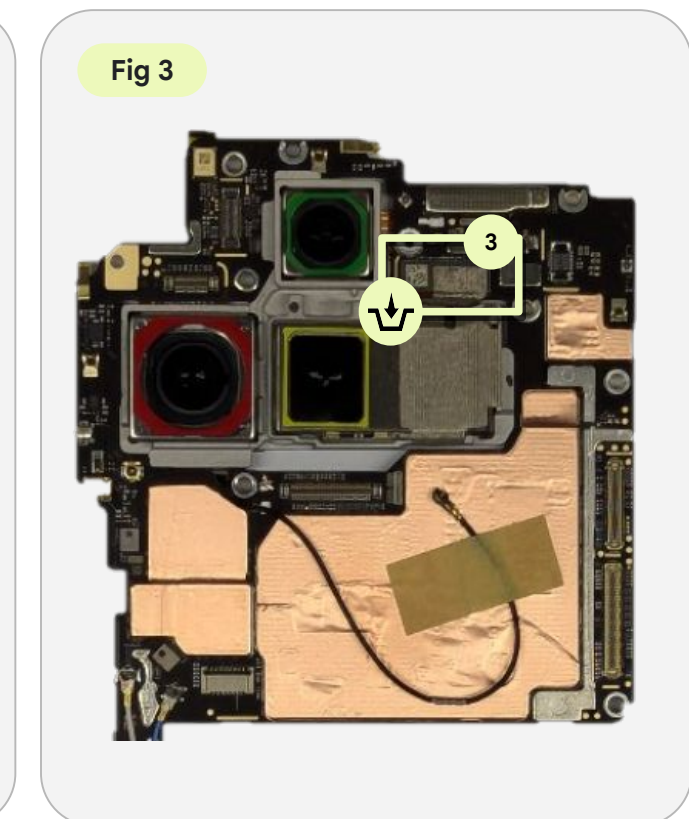

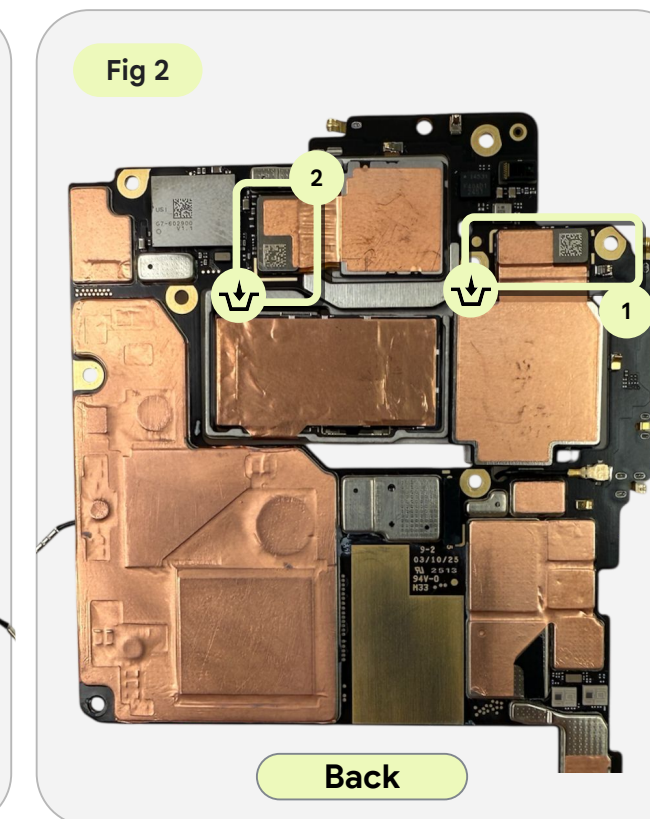

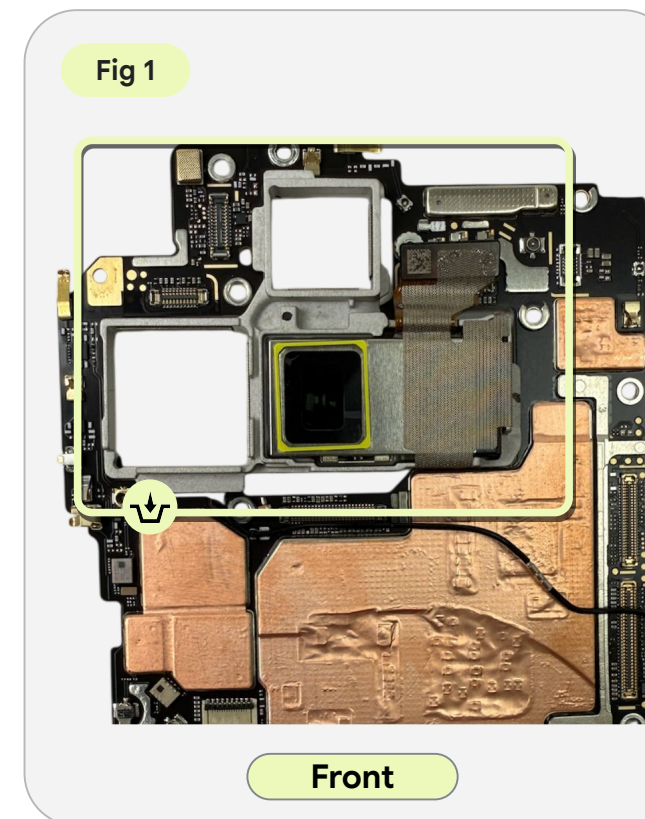

Part: G949-01533-00 (rear camera_WIDE)

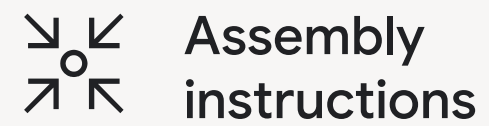

Part: G949-01531-00 (rear camera_tele)

Note

Make sure that every connector is securely attached to the logic board.

Take a close look at the connectors from different angles to help you align them properly.

Assembly
instructions

Logic board

Check the logic board

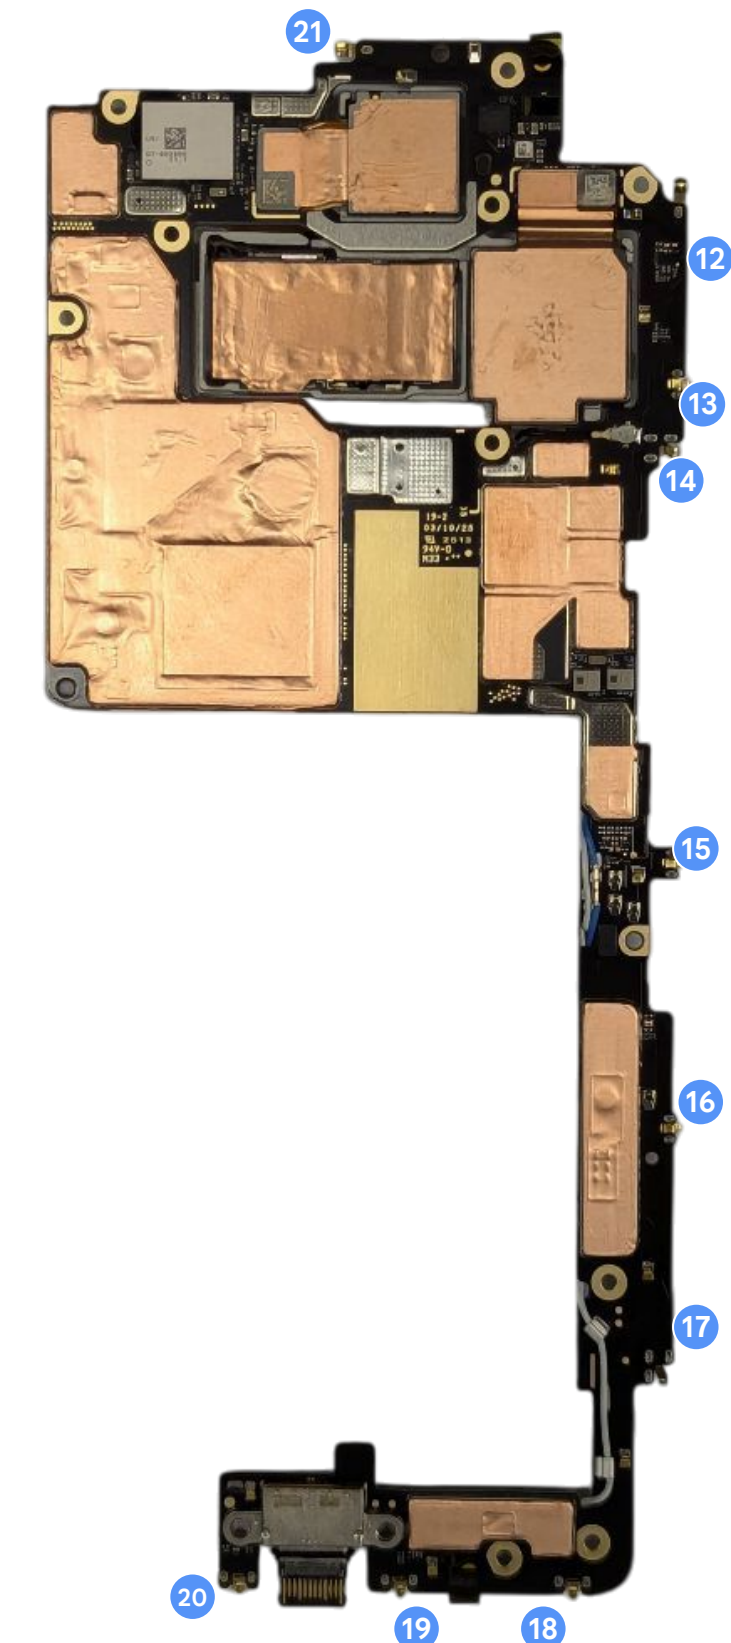

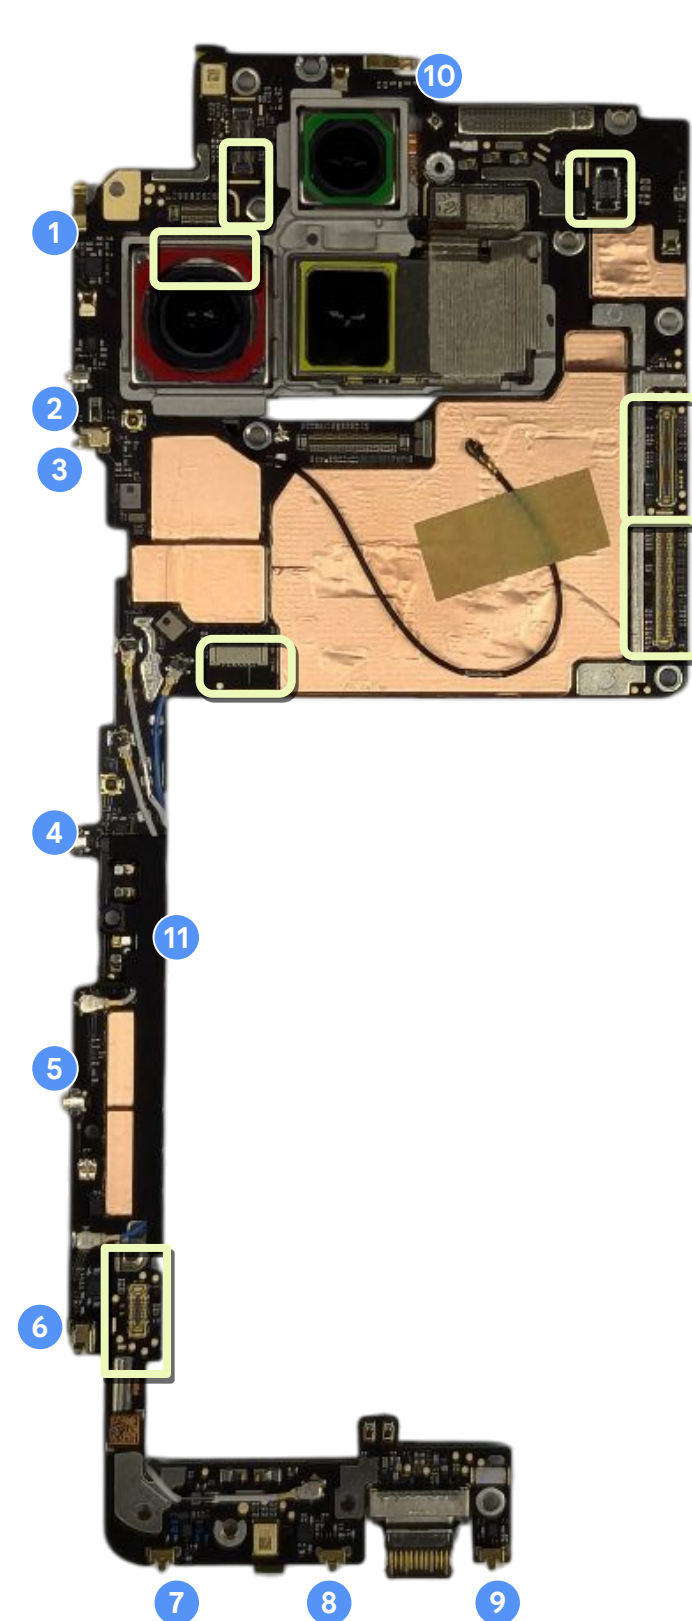

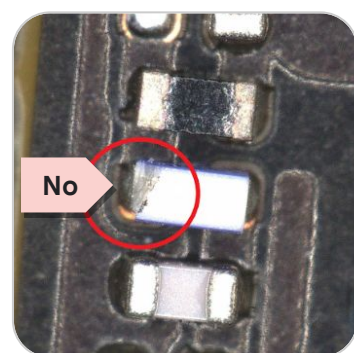

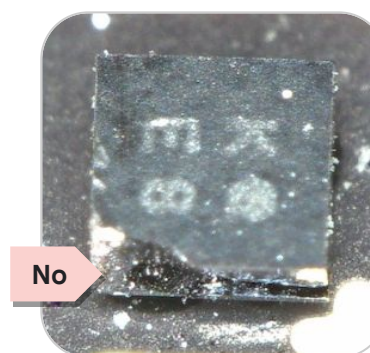

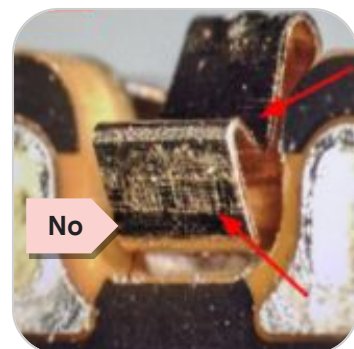

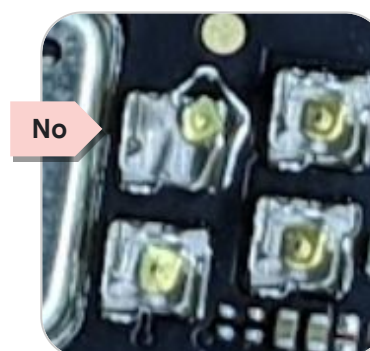

General rules

Use caution

Before you work on the logic board, check for spring deformation and damage to components near the edges.

Pay extra attention to the springs when you assemble to avoid damage to them.

Fasten the coaxial cable

- Gently press the **coaxial cable** into the channels on the logic board with **tweezers**, as shown in **Fig 1**.
- Latch the coaxial cable tip.
- Paste the Kapton between the WIDE and tele lenses, as shown in **Fig 2**.

Part: G821-01179-00 (coaxial cable RCAM)

Part: G806-13991-01 (cable Kapton)

Note

The logic board includes the coaxial cable.

Perform this step only if the cable is unlatched.

Fig 1

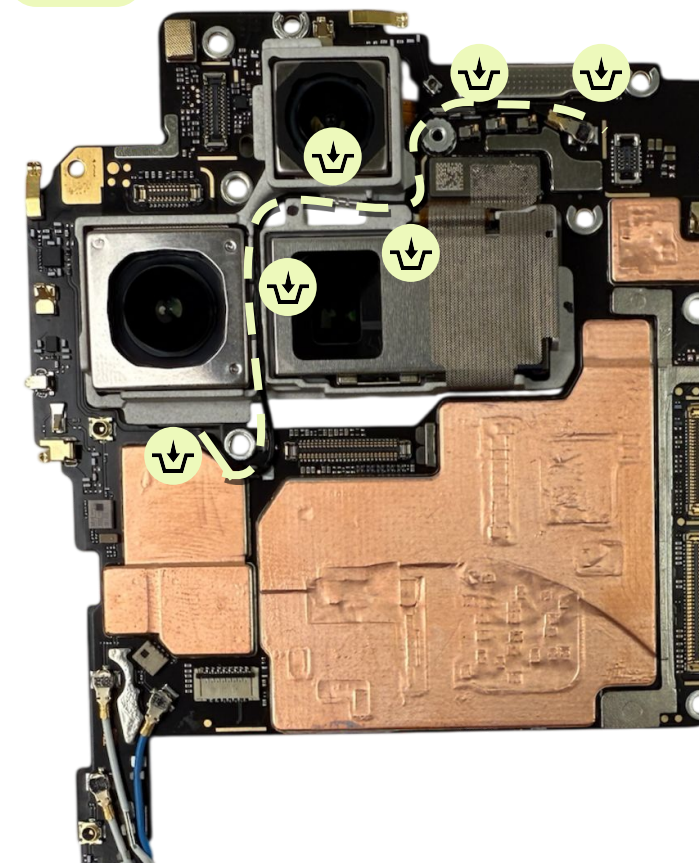

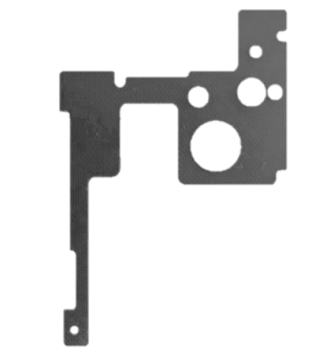

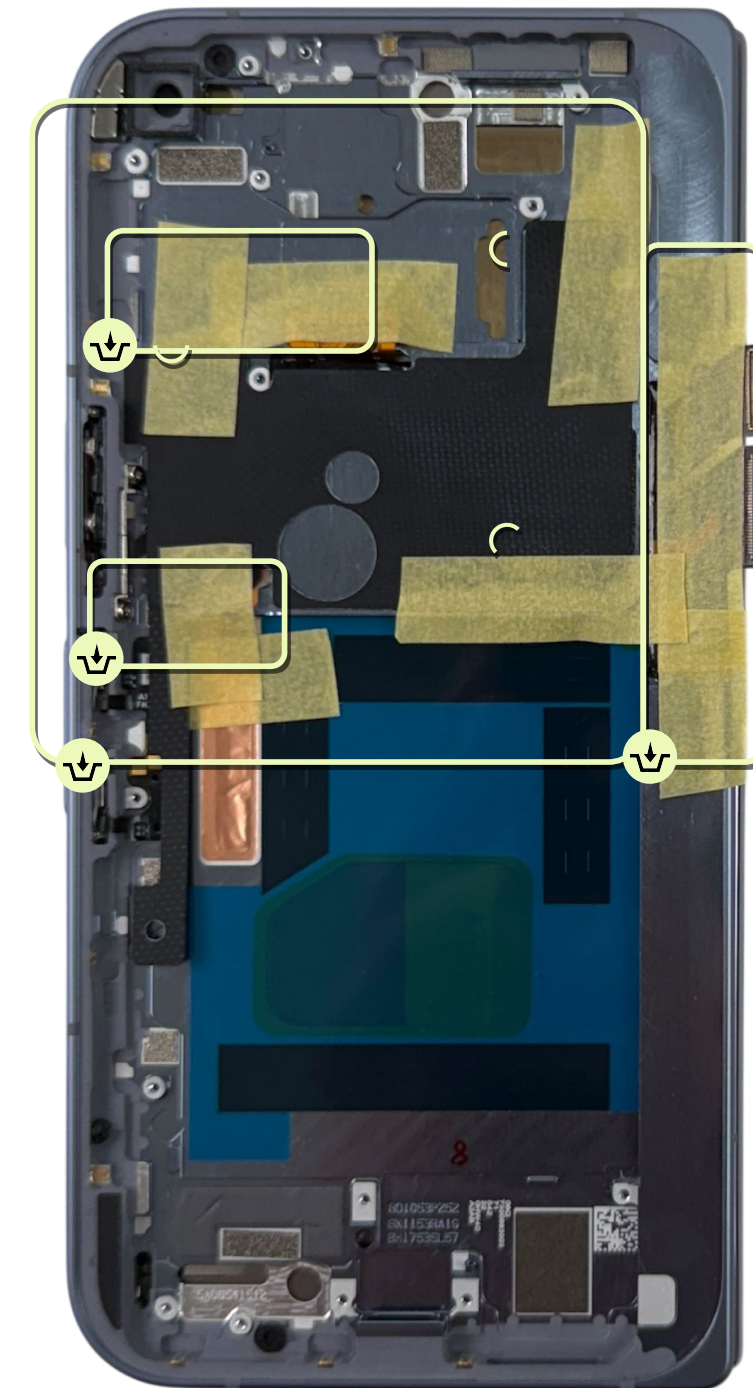

Fig 2

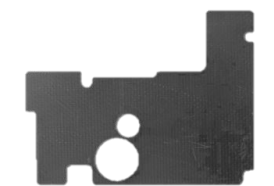

Apply the masking tapes and grease guide

- Keep the **Pixel 10 Pro Fold thermal grease alignment fixture-2** on the enclosure.
- Keep the **Pixel 10 Pro Fold thermal grease alignment fixture-1** on top of **fixture-2**, and secure it with masking tape, as shown in **Fig 1**.

Alignment fixture-2

Alignment fixture-1

Note

Use the C-shaped cutouts on the fixture for proper placement.

If any masking tape gets in the way, remove it first, keep the fixture, and then attach it back in place.

Apply the thermal grease

- Apply small beads (0.1 g ± 5%) of thermal grease into the two cutouts, holding the fixture with the other hand, as shown in **Fig 1**.
- Distribute the grease evenly with an **ESD spudger** or **EVA sponge**, moving in a single upward direction, as shown in **Fig 2**.
- Lift **fixture-1** straight up to avoid contamination, as shown in **Fig 3**.

Part: G160-01058-00 (thermal grease)

Use caution

Review all safety precautions before you begin work.

Clean the Pixel 10 Pro Fold thermal grease alignment fixture-1 and ESD spudger after each use.

Avoid applying conductive thermal grease to nearby components.

Fig 1

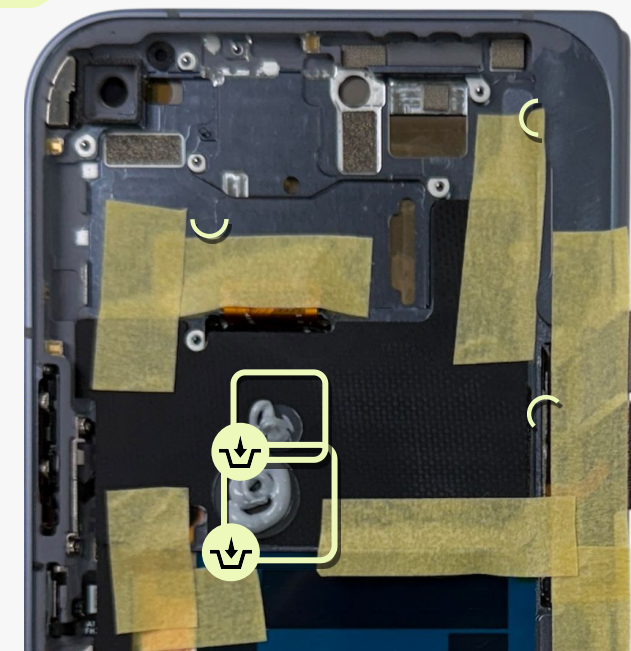

Fig 2

Fig 3

Apply the thermal grease (continued)

- Apply small beads (0.2 g ± 5%) of thermal grease into the five cutouts, holding the fixture with the other hand, as shown in **Fig 1**.
- Distribute the grease evenly with an **ESD spudger** or **EVA sponge**, moving in a single upward direction, as shown in **Fig 2**.
- Lift **fixture-2** straight up to avoid contamination, as shown in **Fig 3**.
- Remove all masking tape.

Part: G160-01058-00 (thermal grease)

⚠ Use caution

Review all safety precautions before you begin work.

Clean the Pixel 10 Pro Fold thermal grease alignment fixture-2 and ESD spudger after each use.

Avoid applying conductive thermal grease to nearby components.

💡 Note

Use a dust-free cotton swab to clean up any excess thermal grease.

Fig 1

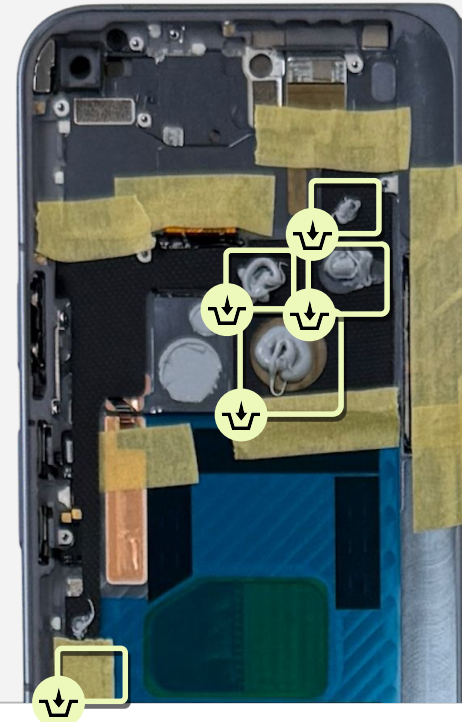

Fig 2

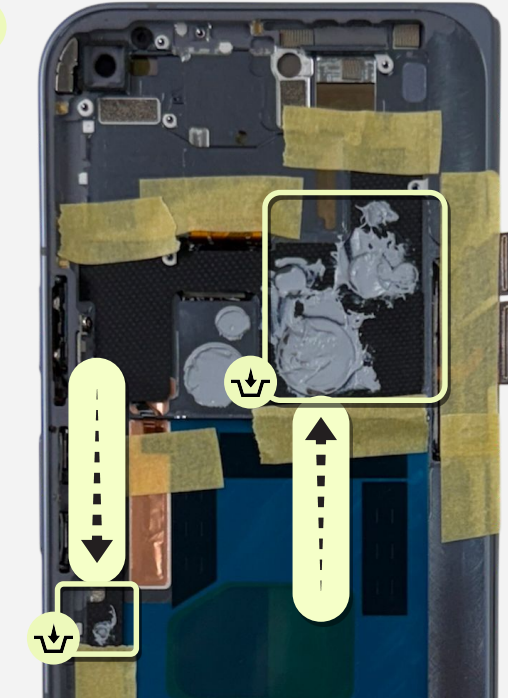

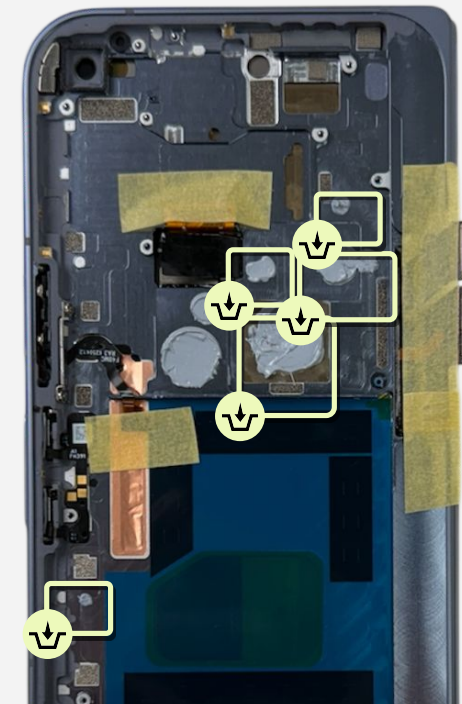

Fig 3

Prepare for the assembly

- If you use a new ID sub, remove the **mic 3, copper foil, vibrator, mic 1, and left bottom liners**. Lift the **inner FCAM liner**.
- Lift the **base top or bottom bridge FPC**, **inner display FPC**, and fold the **FPS FPC** downward to prevent them from being trapped under the **logic board**.

Note

Remove masking tape from the inner display, base top bridge, base bottom bridge, and FPS connectors.

For Mic 1/ 3 liner, grab the end of tab to move the liner.

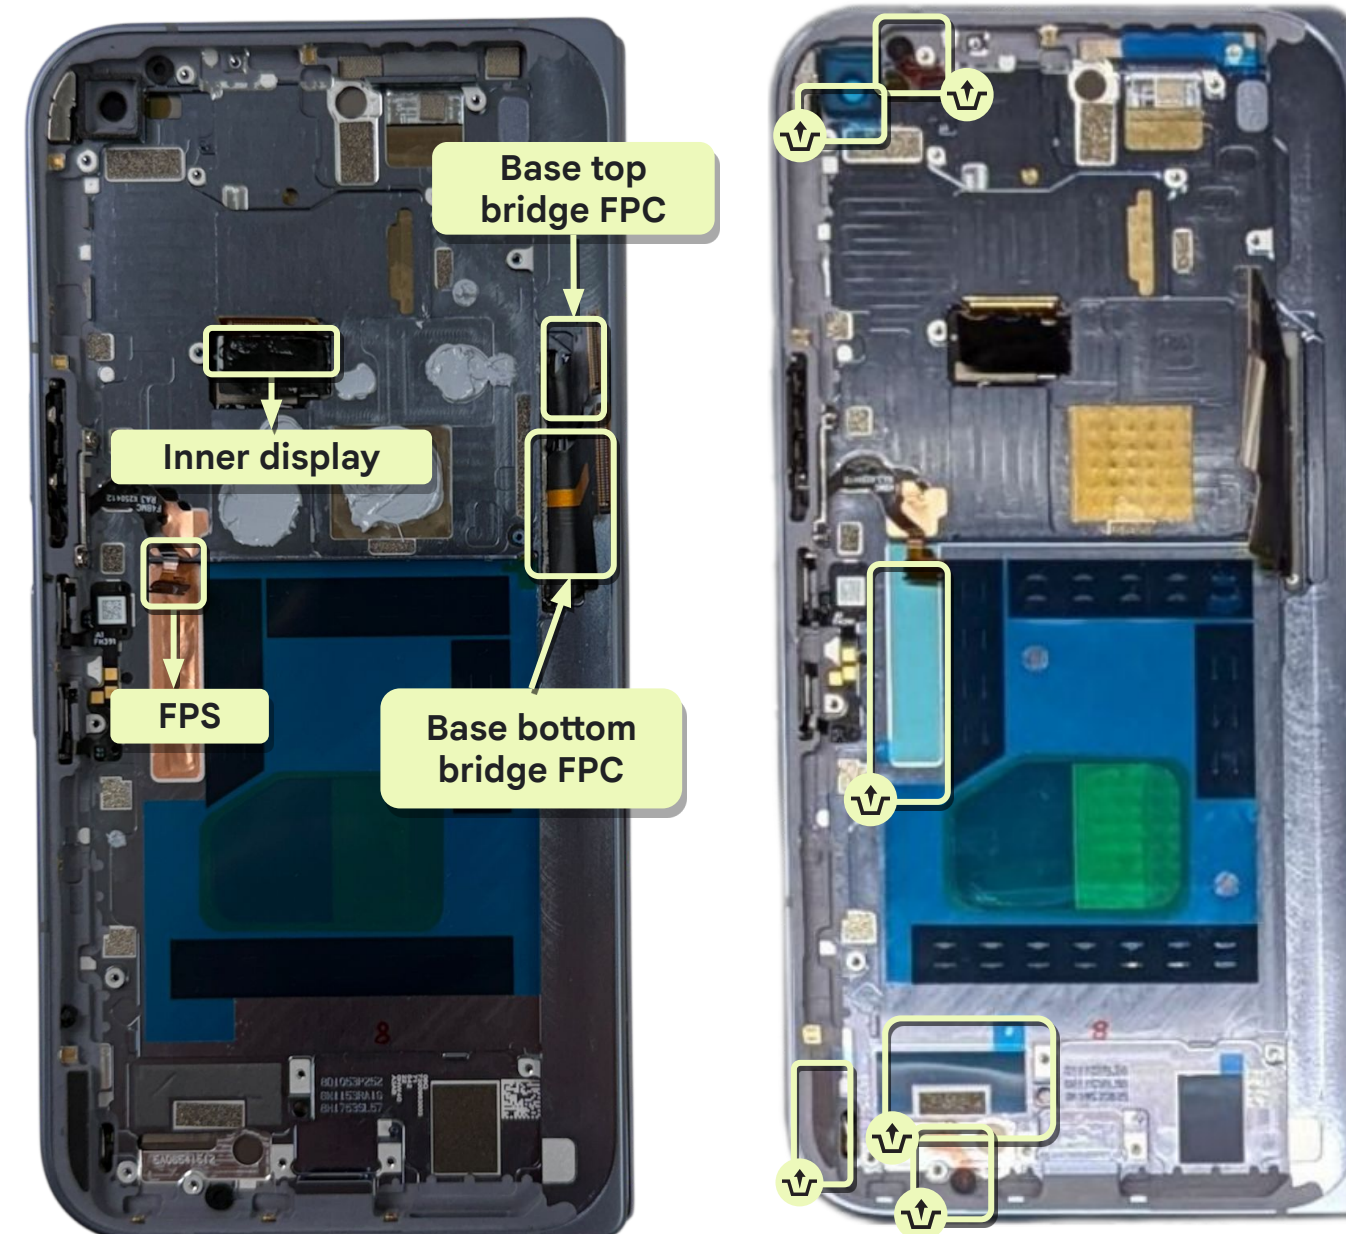

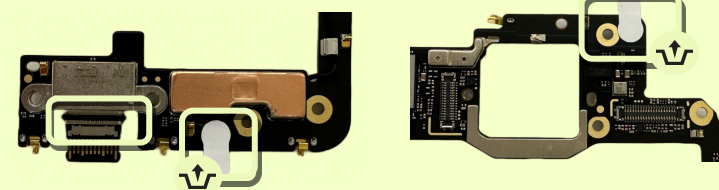

Leave the battery PSA liner in place.

Note

Clean the rubber surface with dust-free cotton swabs before installation.

Remove the mic protective liners on the logic board if you use a new logic board.

Reuse ID sub

New ID sub

Keep the logic board

- Keep a piece of **liner** on the mic1 mesh located in the lower left corner of the **logic board**.
- Insert the sticking out lower tip of the **logic board** into the USB slot to install it downward, and pull out the inserted liner.
- Install the **logic board** by gently pushing it to the left to prevent spring damage.
- Make sure that the **inner display FPC** passes through the gap between the **logic board** and the bottom of the **RCAM**.

Note

Don't wear gloves when you handle the logic board.

During installation, make sure that the base top bridge, base bottom bridge, and FPS cables aren't trapped under the logic board.

Note

Make sure that the logic board is properly installed sits against the alignment pins, as shown in **Fig 1**, and it sits against the retaining wall, as shown in **Fig 2** and **Fig 3**.

Fig 1

Fig 2

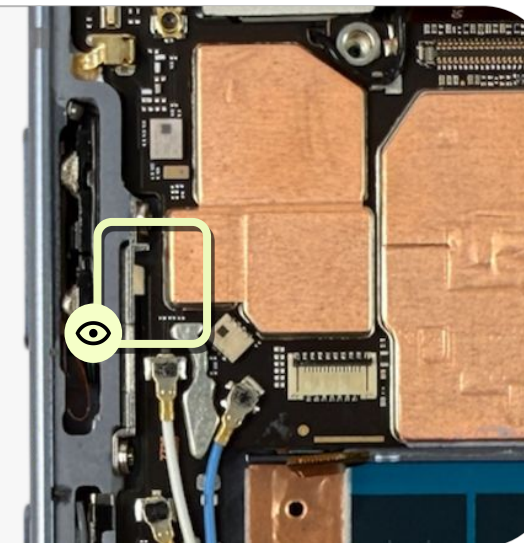

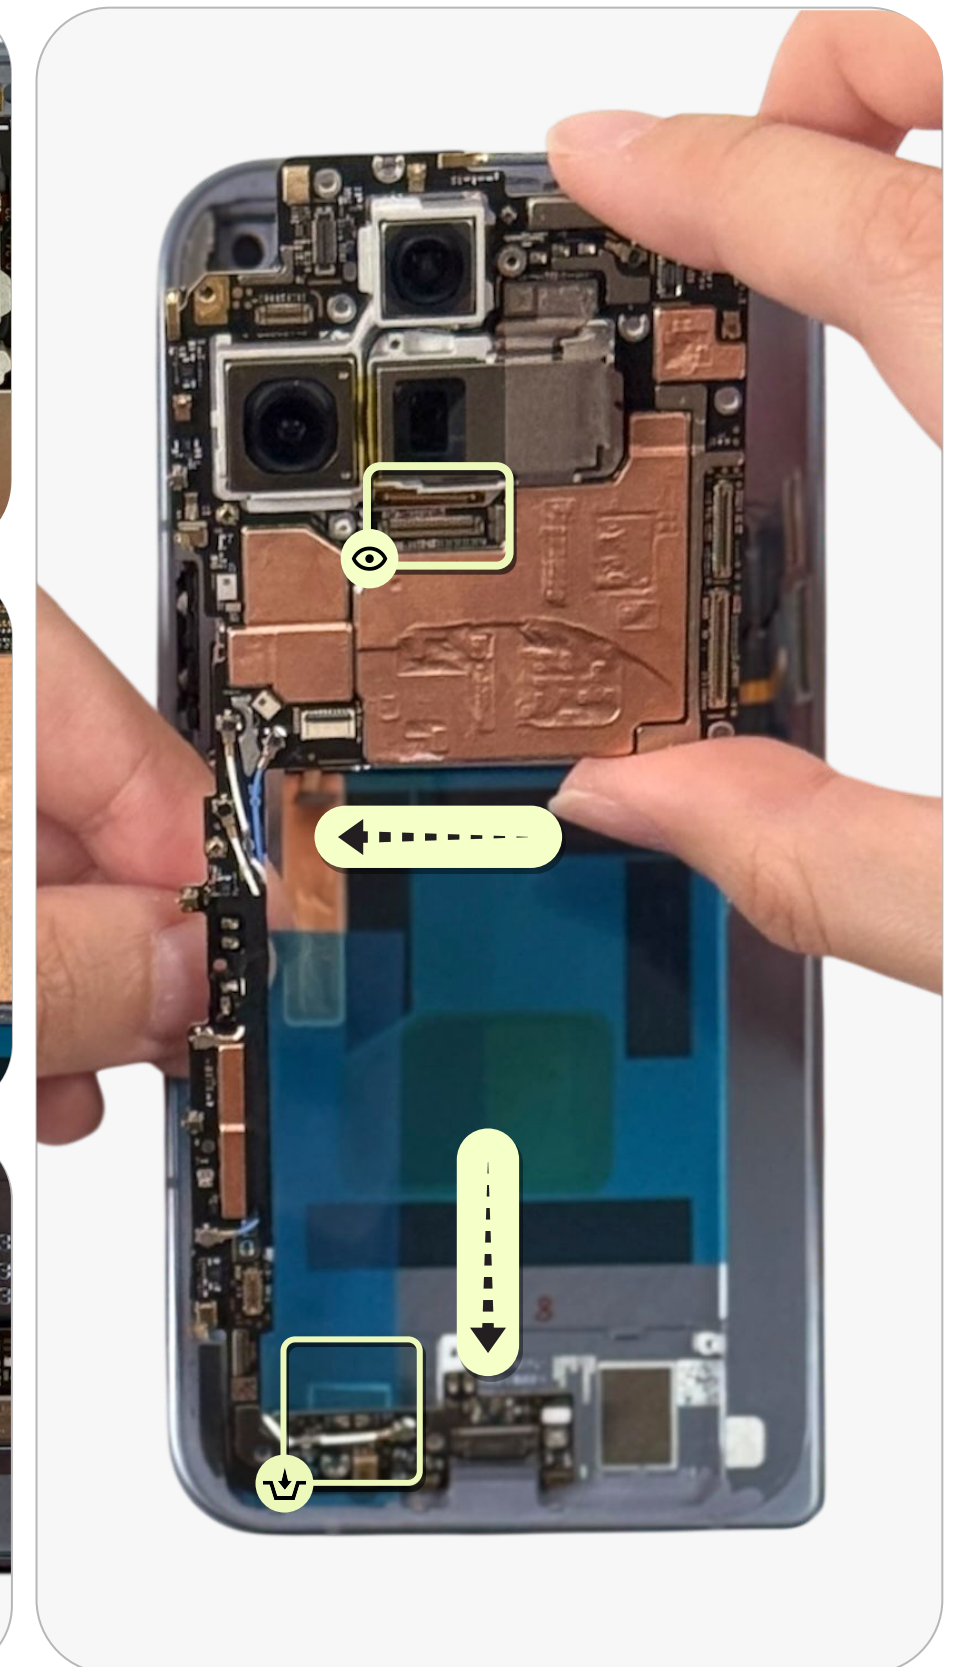

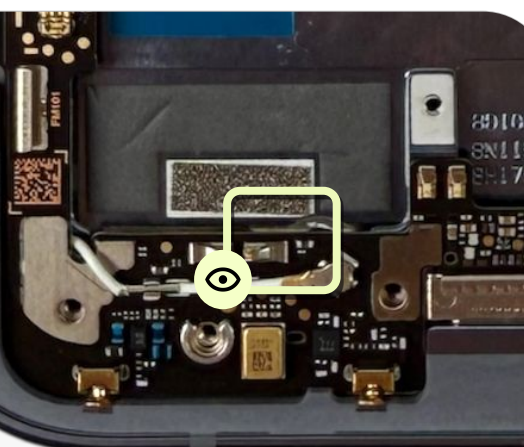

Fig 3

Insert the FPS flex to ZIF connector

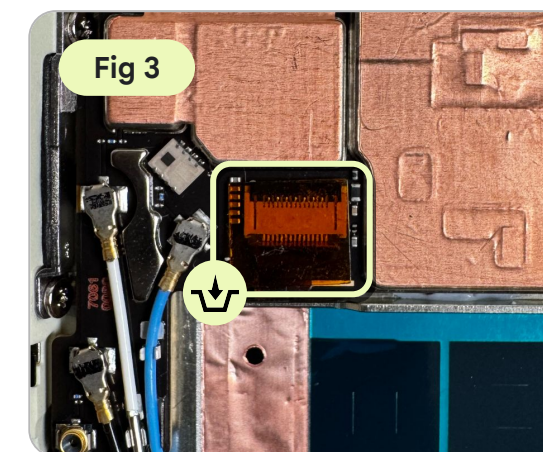

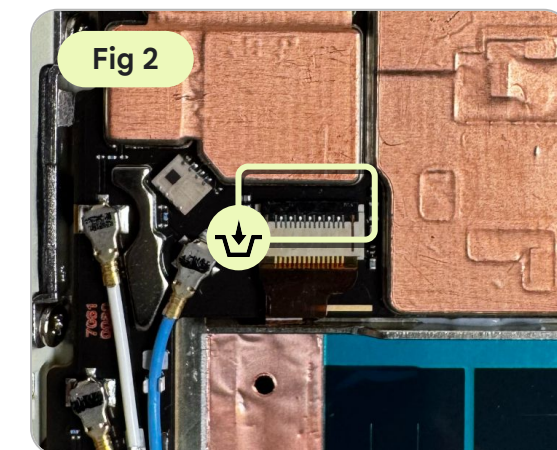

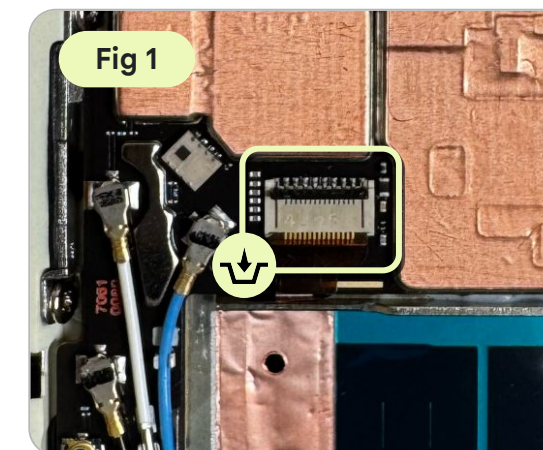

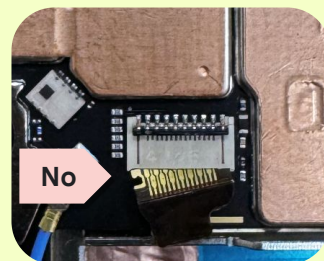

- Insert the FPS flex into the ZIF housing, to ensure full seating, as shown in **Fig 1**.
- Lock the latch for secure connection, as shown in **Fig 2**.
- Apply Kapton for insulate and protect, as shown in **Fig 3**.

Part: G806-14456-01 (FPS Kapton)

Note

Check if the FPS flex cable is fully seated in the housing.

Screw the logic board in place

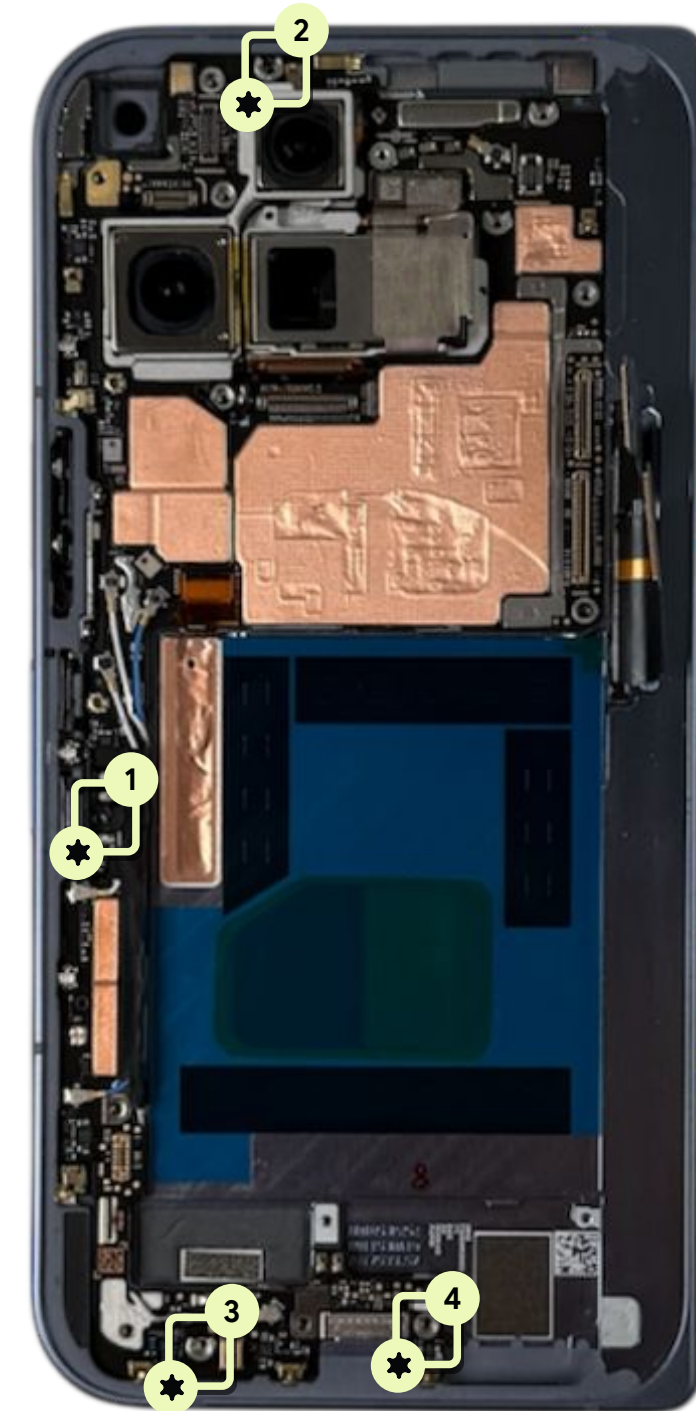

- Tighten the four **logic board screws**.
- Tighten the screws a second time to make sure that there's firm attachment.

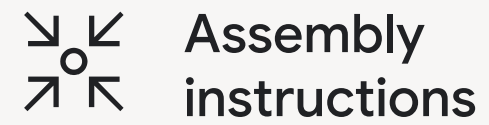

Part: G250-06623-00 *4 (screws)

Note

Don't reuse the screws.

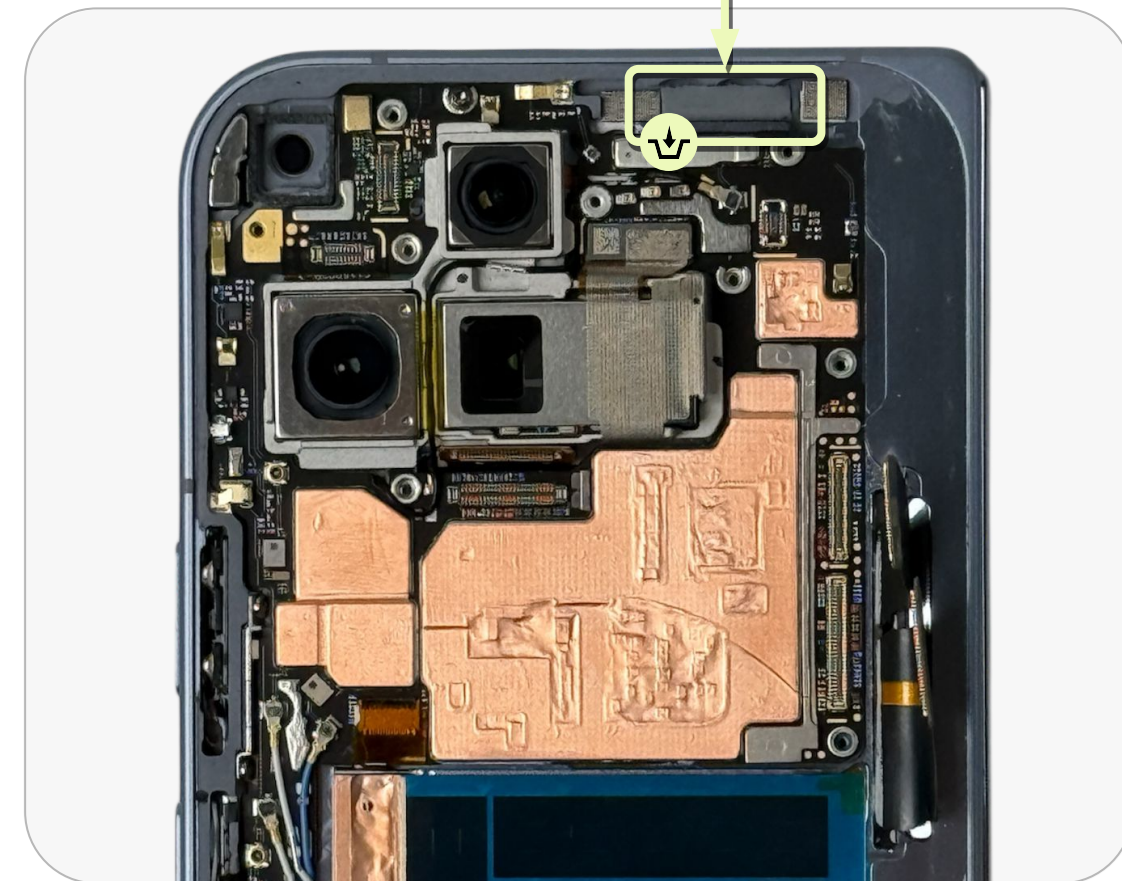

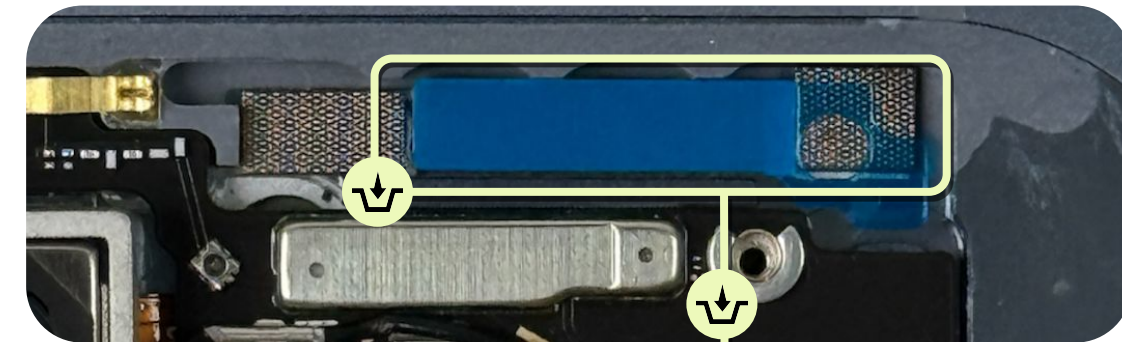

mmWave module and IF FPC

Reuse the mmWave module

- Use a **spudger** to remove residual thermal pad and replace the new **thermal pad** between the two FOFs.
- Tear off the blue liner.

Part: G864-01047-00 (5G thermal pad)

Connect the mmWave module and IF FPC

- Connect the **IF FPC** to the **mmWave module**.
- Keep the **mmWave module** and **IF FPC** onto the **enclosure**, and connect it to the **logic board**.

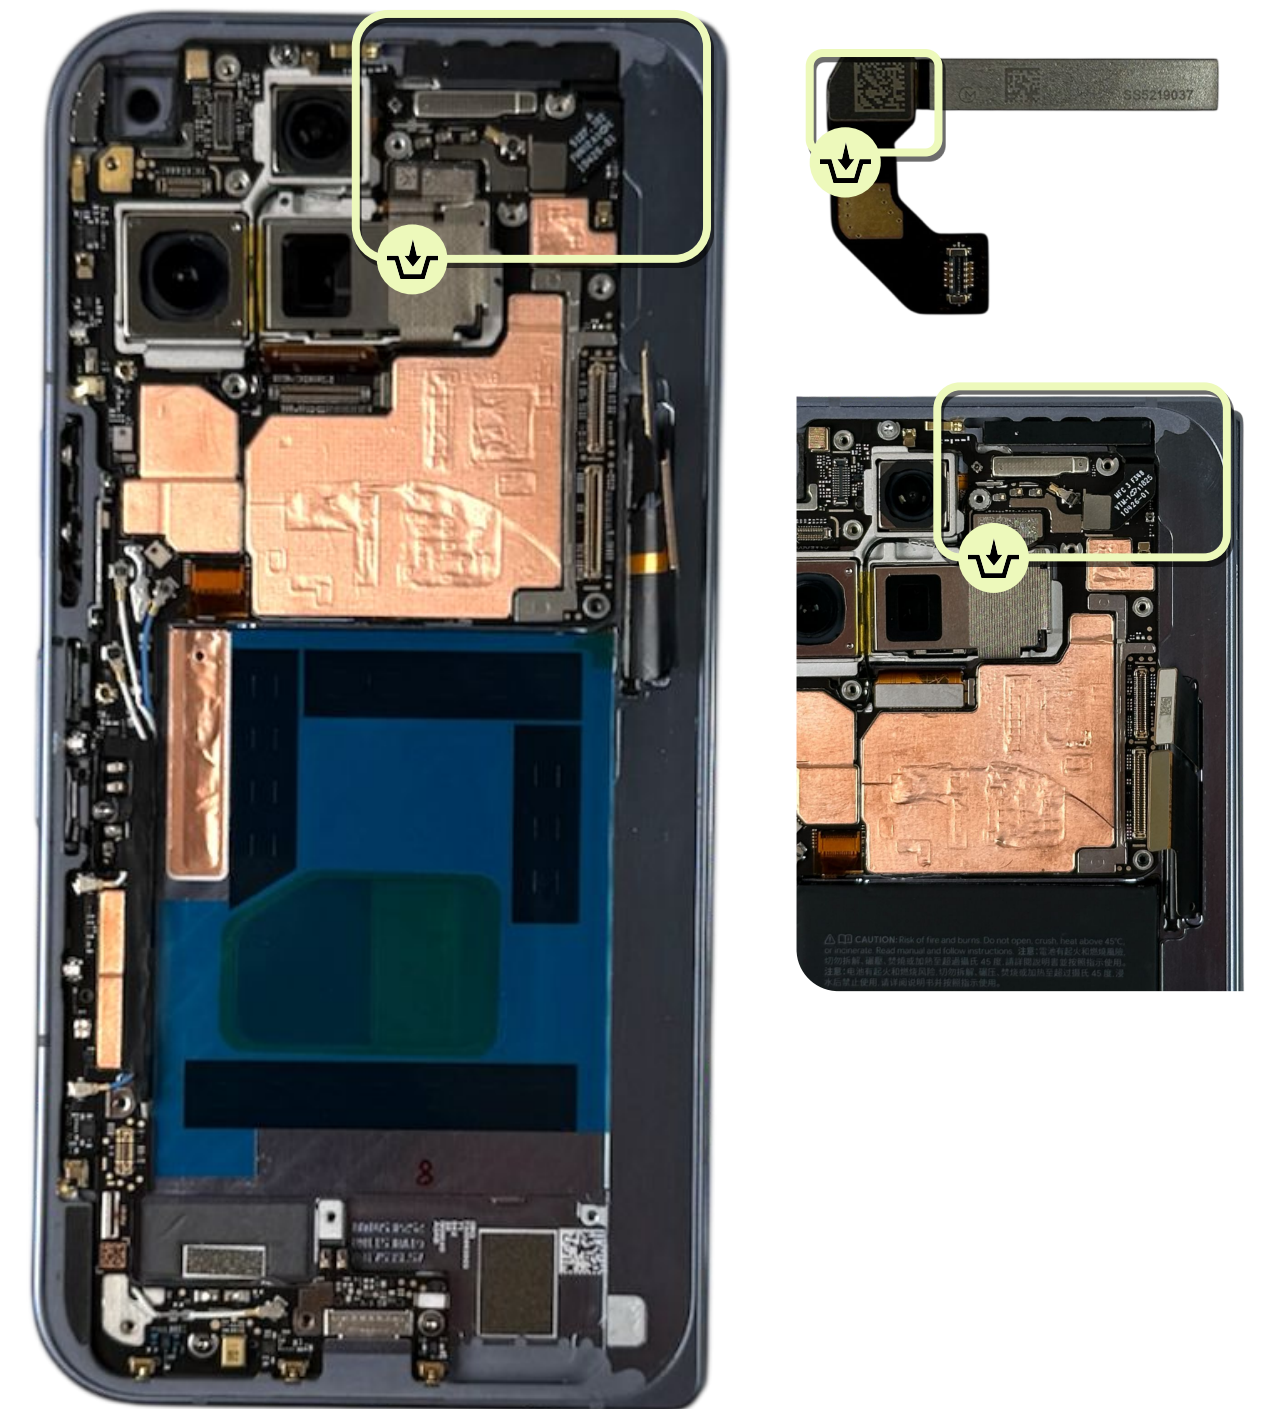

Part: G345-01633-02 (mmWave module)

Part: G652-10426-01 (IF FPC)

Note

Check if every connector is fully attached.

Screw the mmWave cowling

- Fasten the **mmWave cowling screws** with a torx plus 3IP screwdriver.
- Tighten the screws a second time to secure them in place.

Part: G730-09676-00 (mmWave cowling)

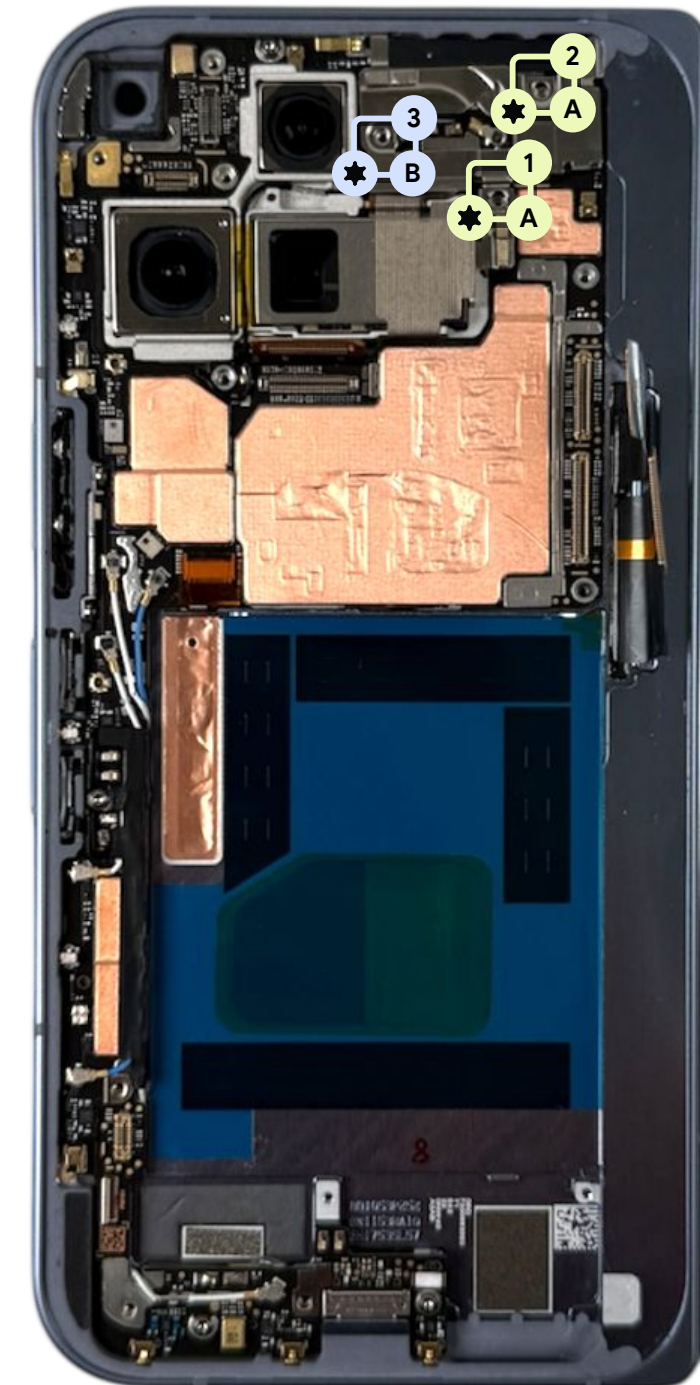

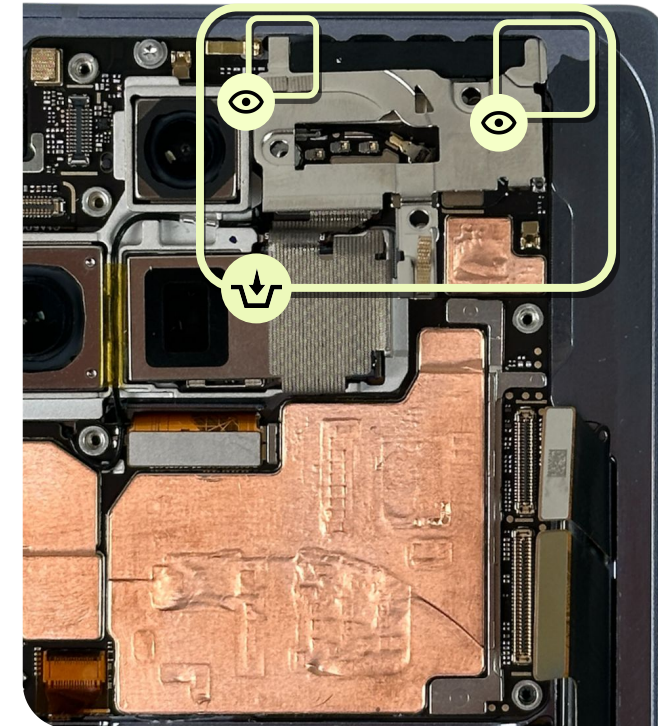

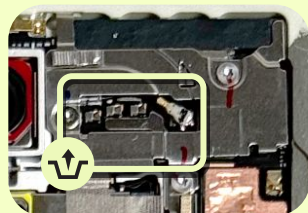

Part: G250-06623-00*2 (screw)

Part: G250-06986-00 (screw)

Note

Don't touch the flash spring.

A: G250-06623-00

B: G250-06986-00

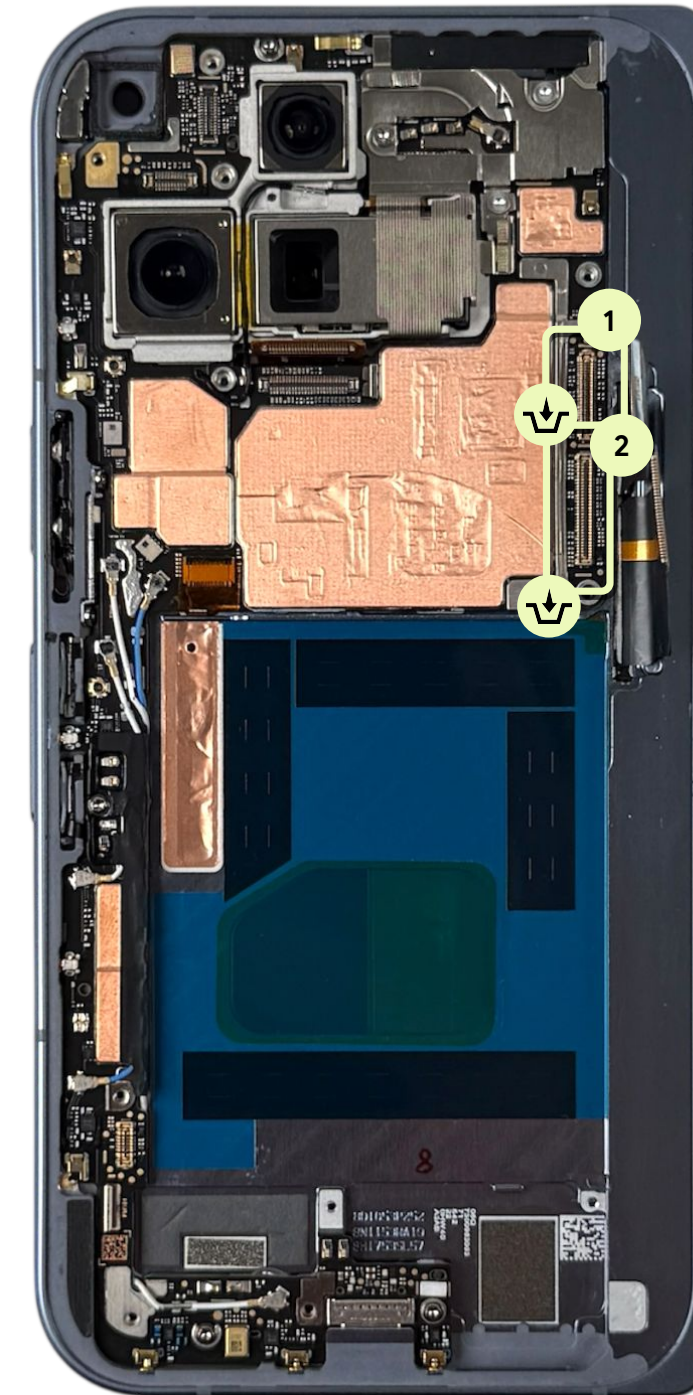

Connect the base bridges

Connect the **base top** and **bottom bridges** to the **logic board**.

Note

Check if every connector is fully attached.

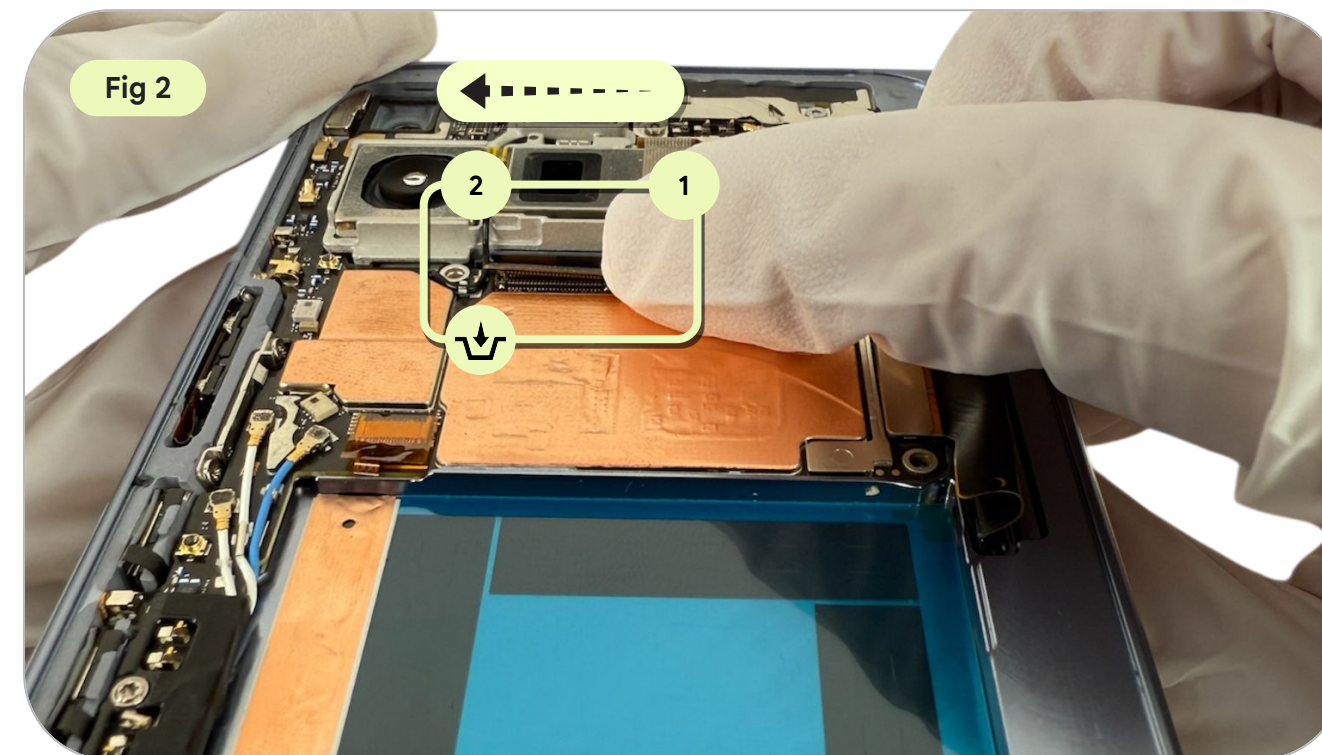

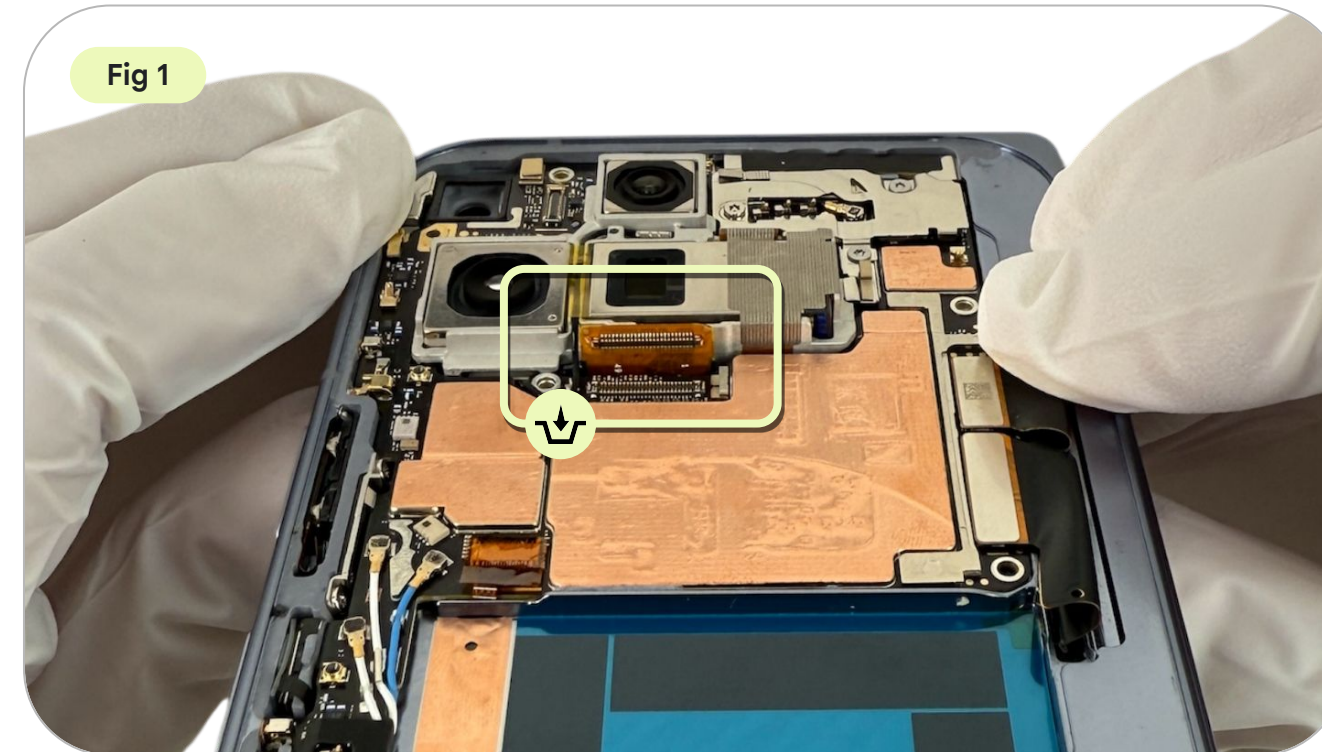

Connect the ID

Lift up the ID sub at a 45 degrees angle and buckle the connector from the right to left.

Note

Check if every connector is fully attached.

Reuse the ID cowl

- Use a **spudger** to remove residual adhesive from the **cowl**.
- If residue remains, clean the surface with a **dust-free cloth** and **IPA**.
- Apply a new **ID cowl PSA** to the designated position, as shown in **Fig 2**.

Part: G730-09680-00 (ID cowl)

Part: G806-14384-00 (ID cowl PSA)

Note

The ID cowl comes with the PSA. Perform this step only when you reuse the part.

Fig 1

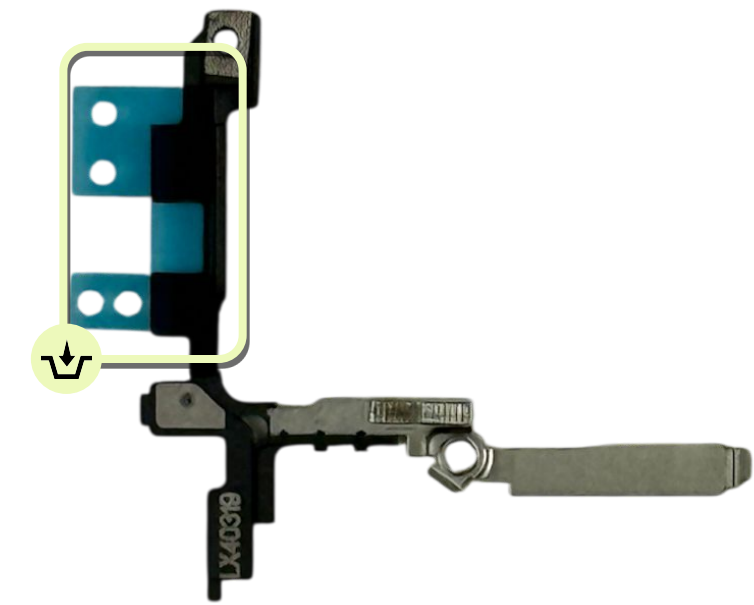

Fig 2

Install the base bridge and ID cowlings

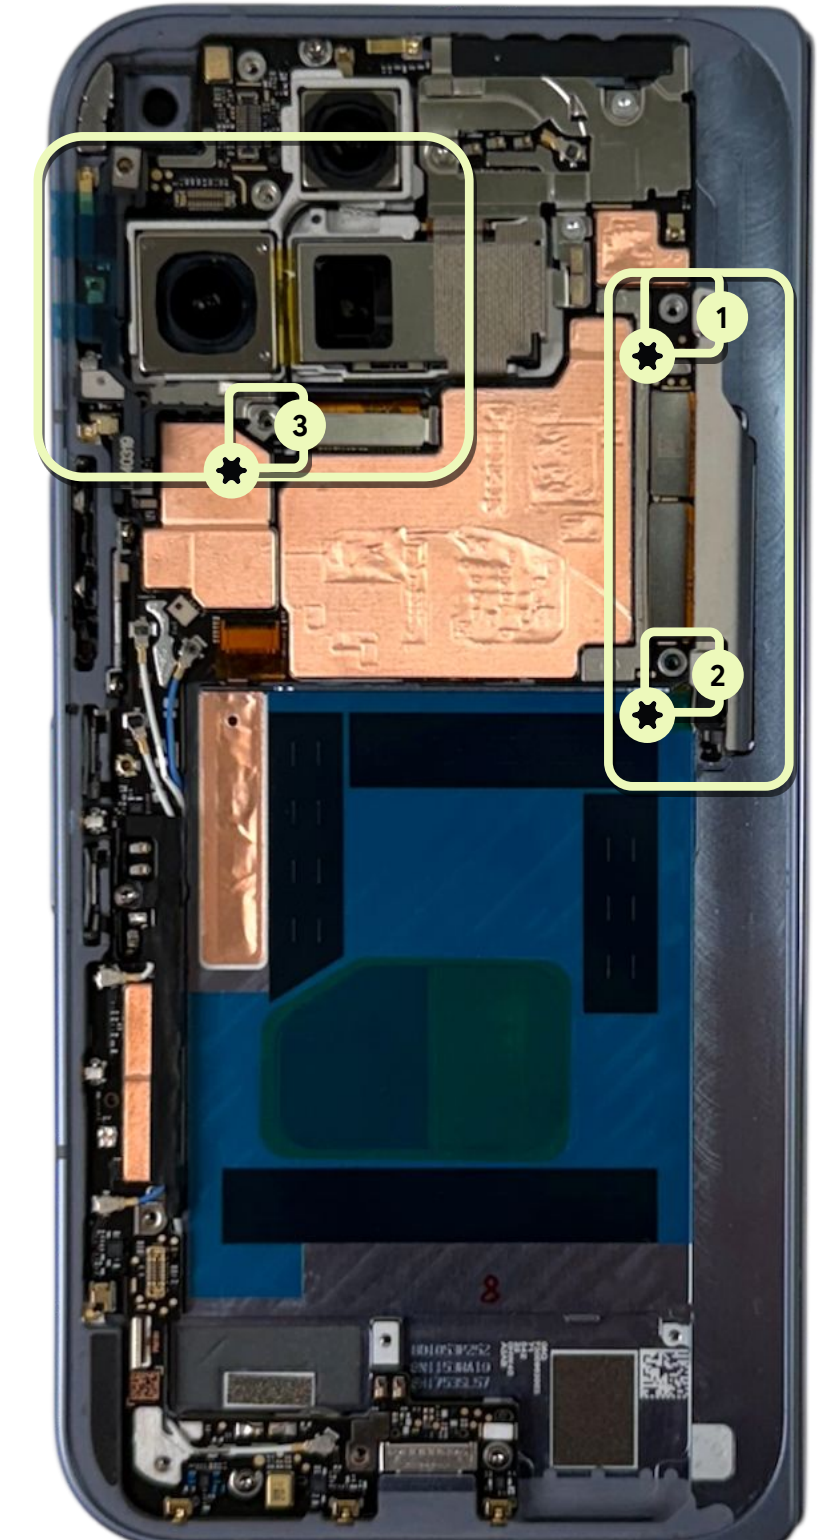

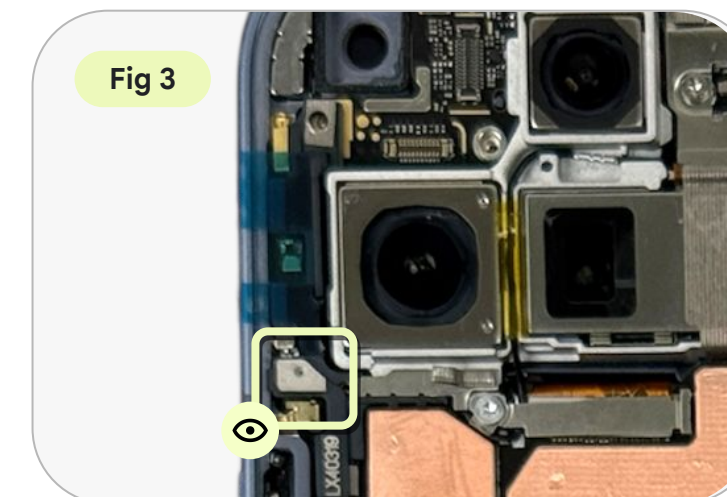

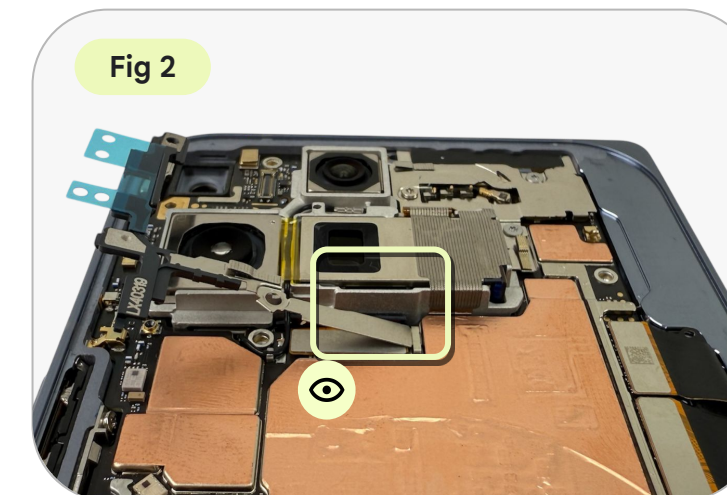

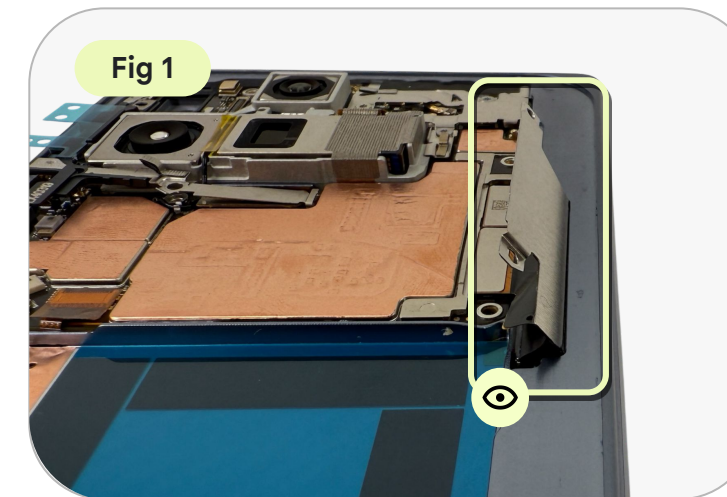

- Insert the bridge of the **base bridge cowling** into the enclosure groove, as shown in **Fig 1**.
- Install the **ID cowling**, and make sure that the lower right and left end touches the retaining wall, as shown in **Fig 2** and **Fig 3**.
- Screw both cowlings into place with a **torx plus 3IP screwdriver**.
- Tighten the screws a second time for a secure fit.

Part: G730-09678-00 (base bridge cowling)

Part: G730-09680-00 (ID cowling)

Part: G250-06623-00*3 (screw)

Part: G806-14384-00 (ID cowling PSA)

 Assembly
instructions

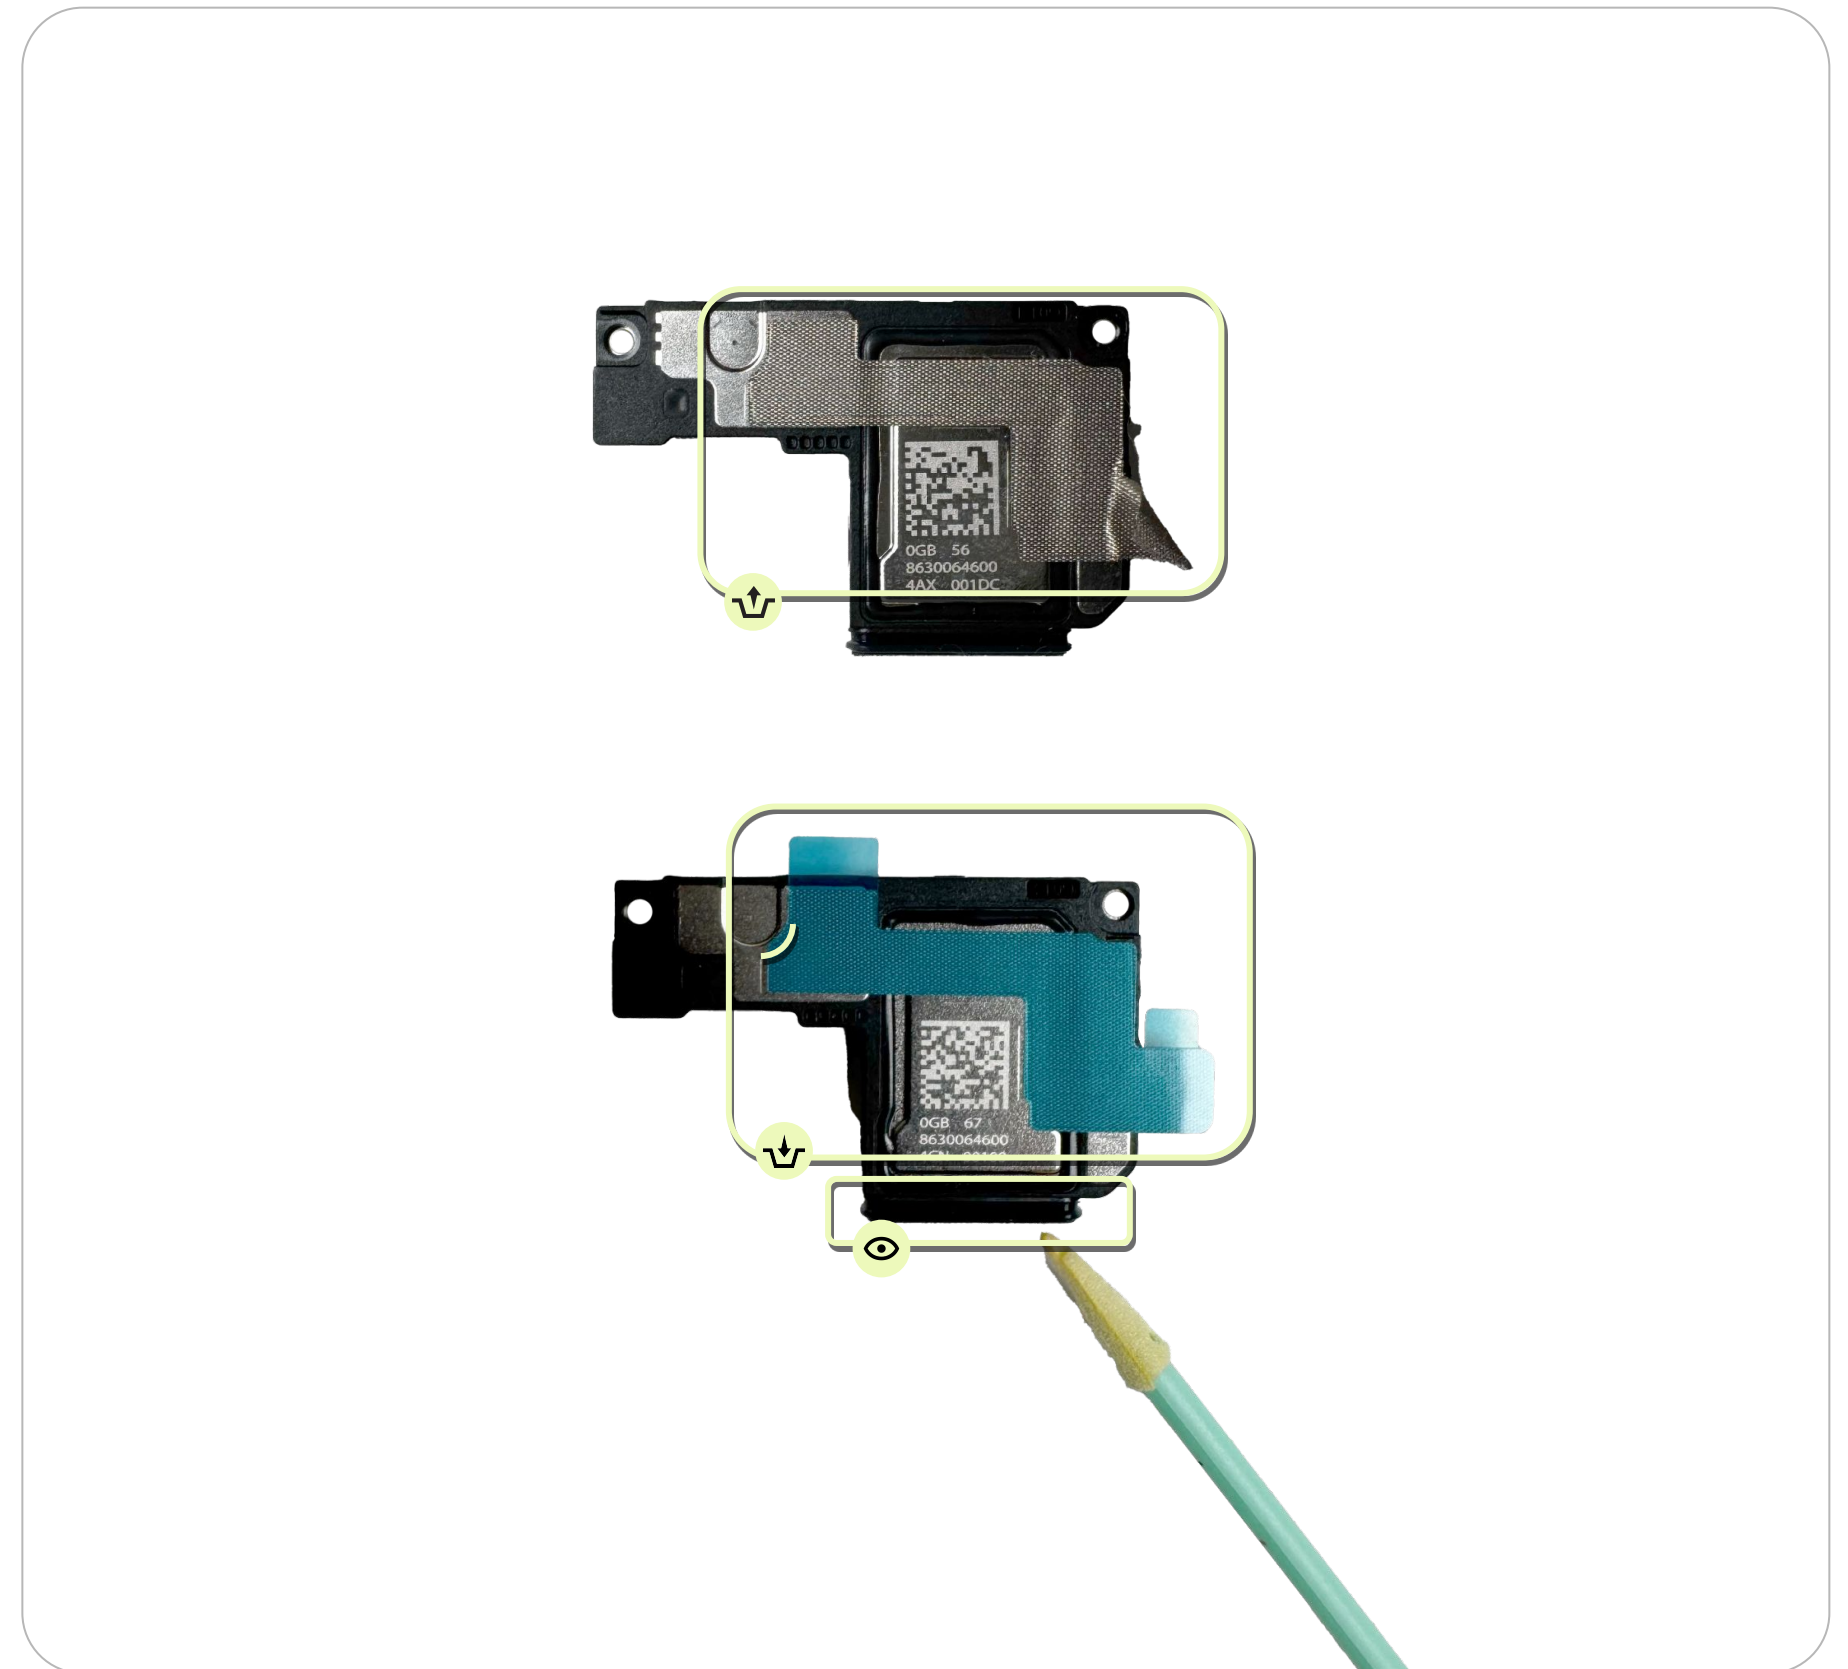

Bottom speaker

Apply the bottom speaker tape

- If you reuse the **bottom speaker**, remove the adhesive with a spudger. Wrap a spudger with a **dust-free cloth**. Dip it in **IPA** to clean residue.
- Apply the **conductive tape** to the bottom speaker and align it with the curve in the upper left corner.
- Clean the **rubber** in the bottom with a dust-free cotton swab.

Part: G863-00646-00 (bottom speaker)

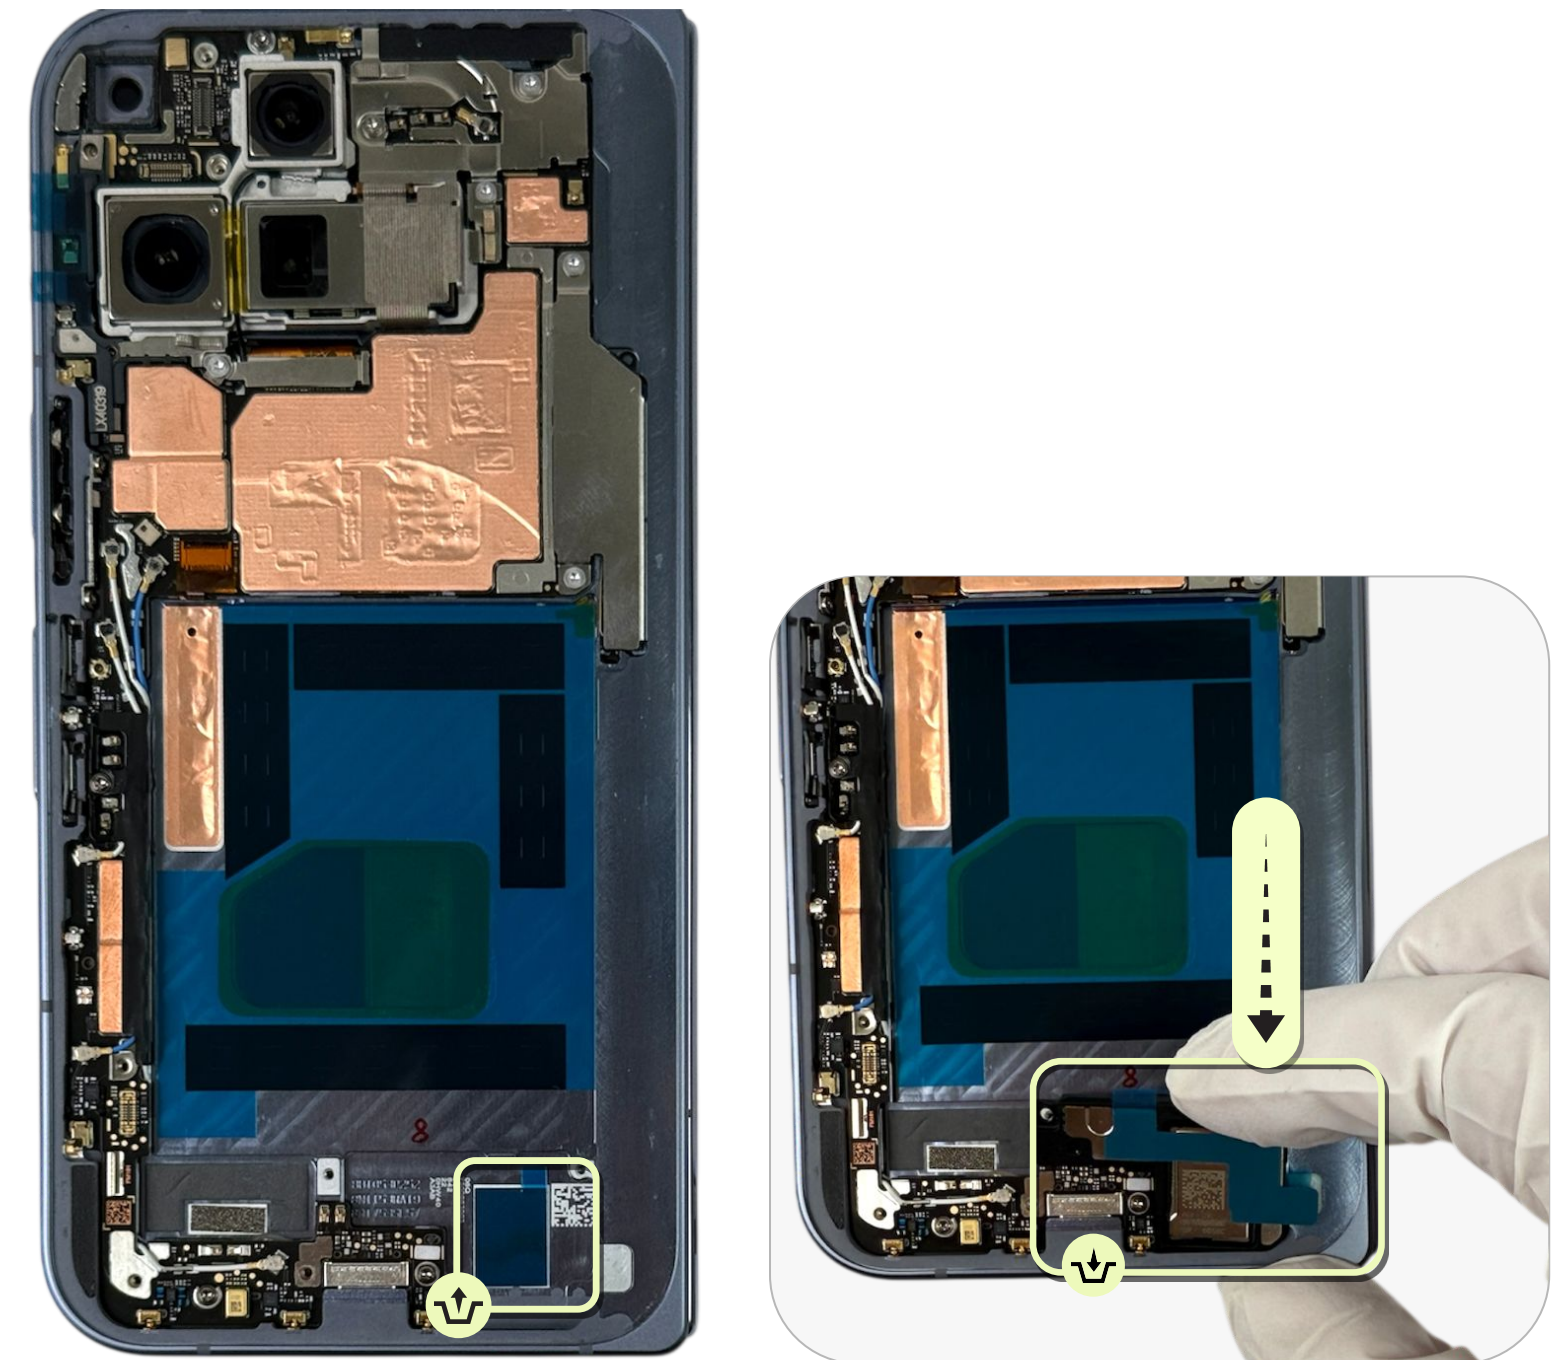

Part: G806-14375-00 (conductive fabric)

Attach the bottom speaker

- Remove any residual **bottom speaker PSA** and replace it with a new one if you reuse the **enclosure**.
- Tear off the blue liner.
- Install the **bottom speaker** at an angle under the **enclosure rim**.
- Press down for **six seconds**.

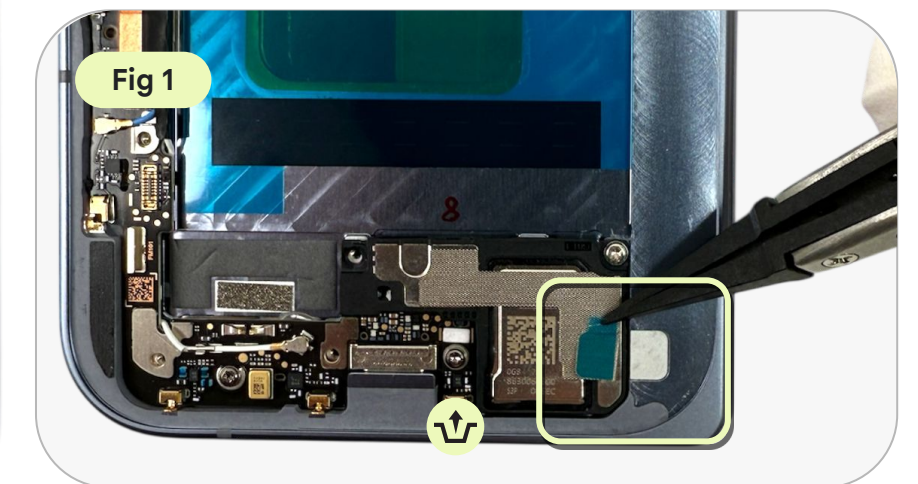

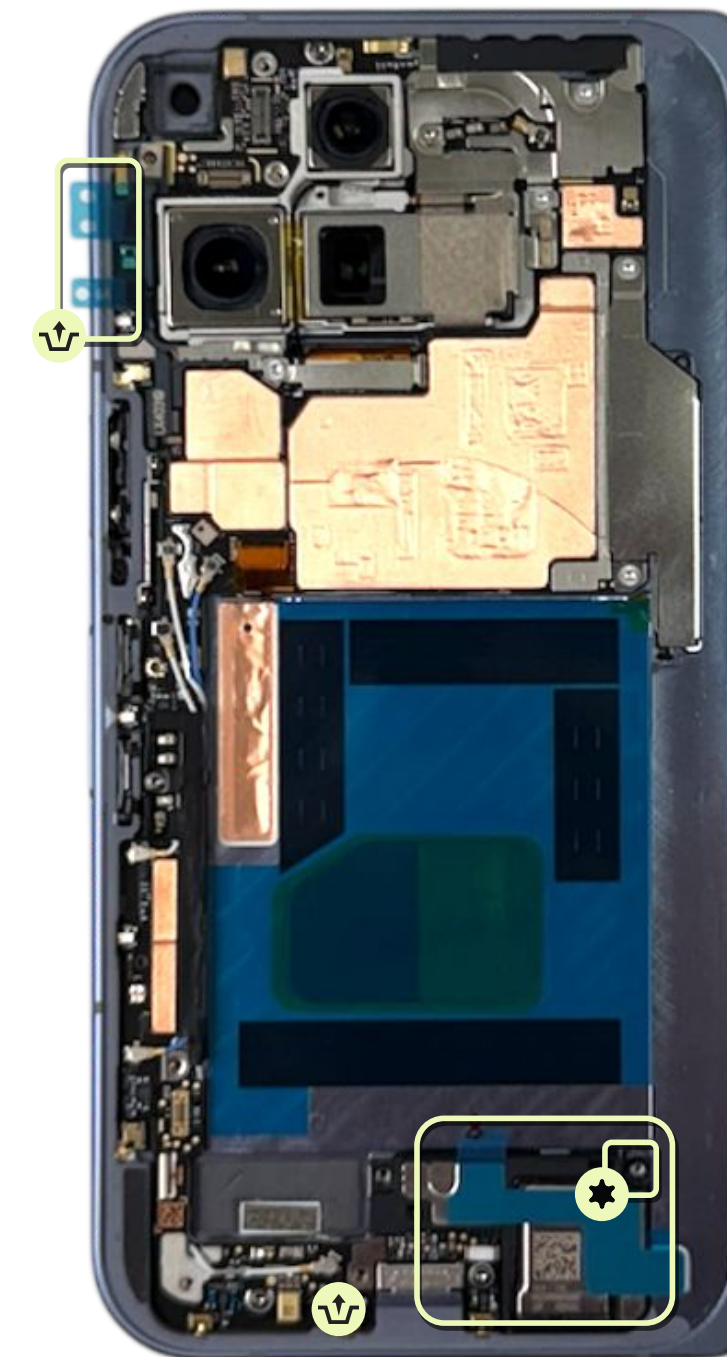

Part: G806-13932-00 (bottom speaker CPSA)

Secure the bottom speaker

- Tighten bottom speaker screw.
- Tighten the screws a second time for a secure fit.
- Remove the **conductive tape liner** and **ID cowling liner**.
- Peel off the liner from the opposite side of the conductive tape and paste on the designated position, as shown in **Fig 1**.

Part: G250-08005-12 (screw)

 Assembly
instructions

Base battery

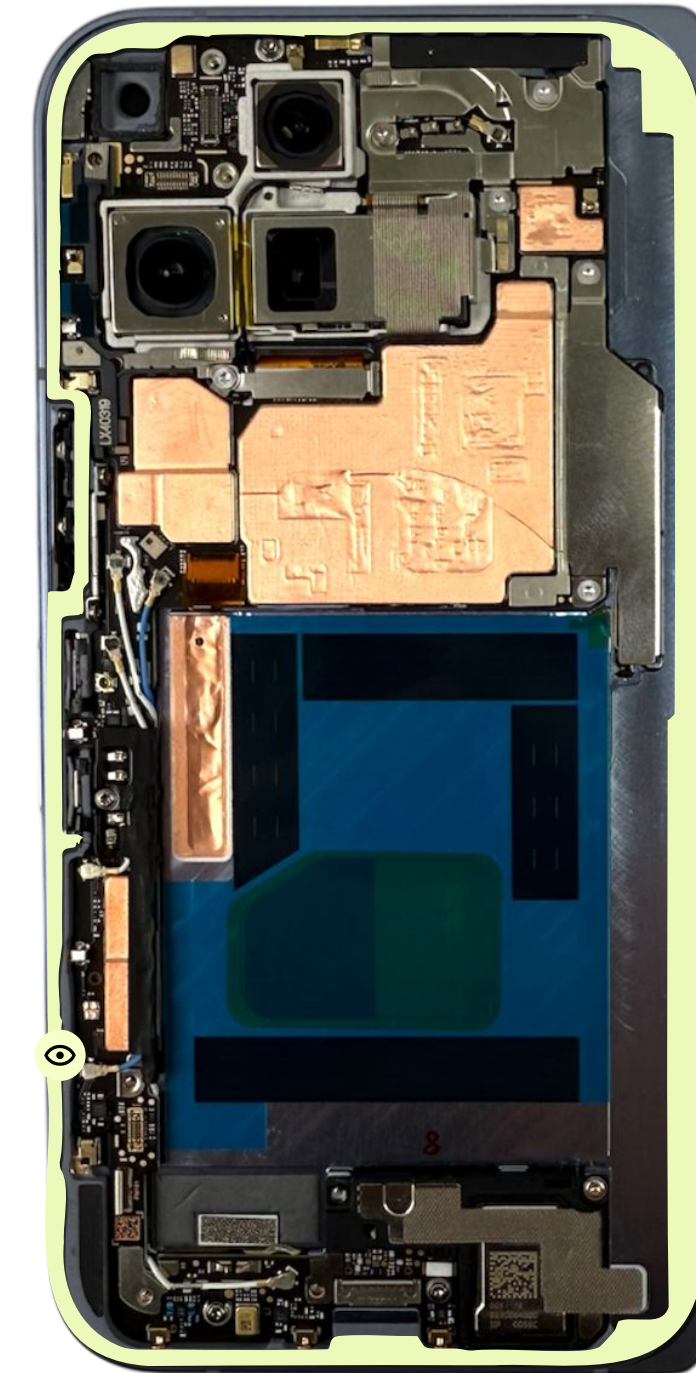

Apply the 3M AP111 primer

- Apply **IPA** around the **enclosure's** edges with a **dust-free cotton swab**.
- Apply one round of **3M AP111 primer** around the **enclosure's** edges with a **dust-free cotton swab**.

Use caution

After the primer is applied, complete the assembly in 25 minutes.

Align the BG PSA

- Slowly remove the larger liner from the **adhesive sheet** to expose the adhesive.
- Keep the sheet over the device, to align it with the top side of the **enclosure**.

Part: G806-14457-00 (BG PSA)

Use caution

Don't touch the adhesive.

If it gets dirty, replace it.

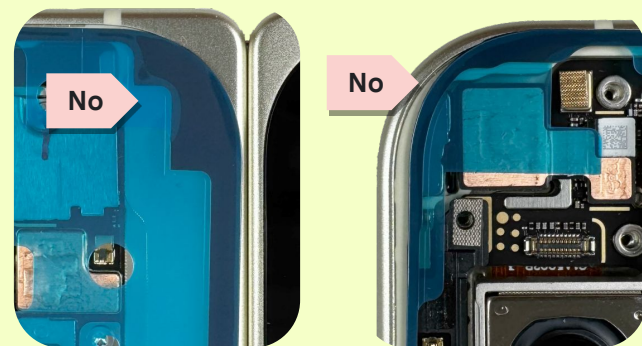

Activate the adhesive

- Make sure that the **adhesive** is fully seated on the **enclosure**.
- Activate it with a **spudger**.

Note

Check for mis-alignment and replace it.

Remove the liner (first layer)

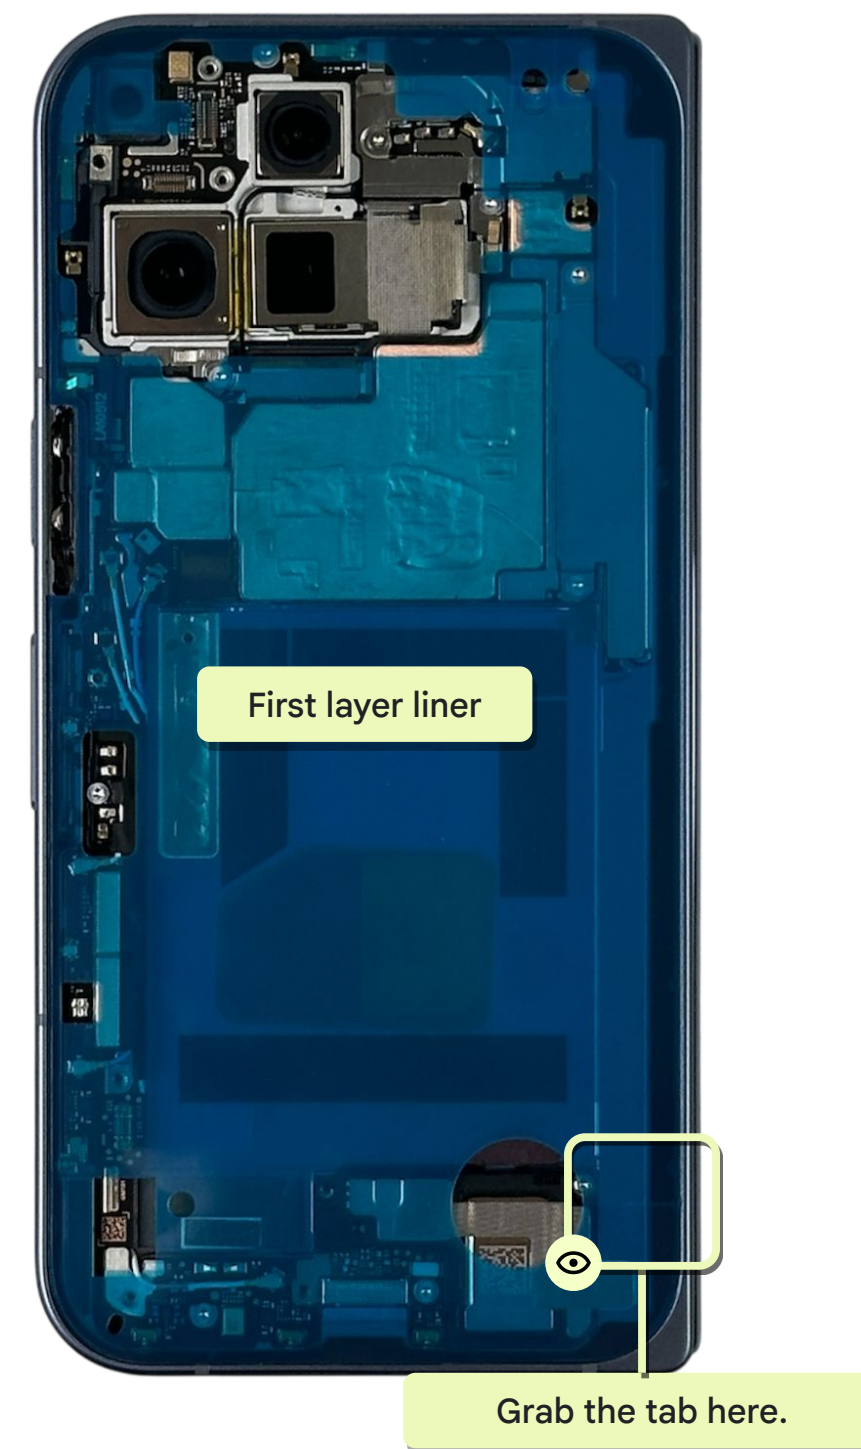

Pull the tab carefully to remove the liner.

Use caution

Don't lift the adhesive.

Don't remove the second layer of the liner.

Apply the AP111 primer

- Remove debris and loose screws from the enclosure before you install the base battery.
- Peel off the blue liner.
- Apply AP111 across the base battery's back side, excluding the pull jacket.

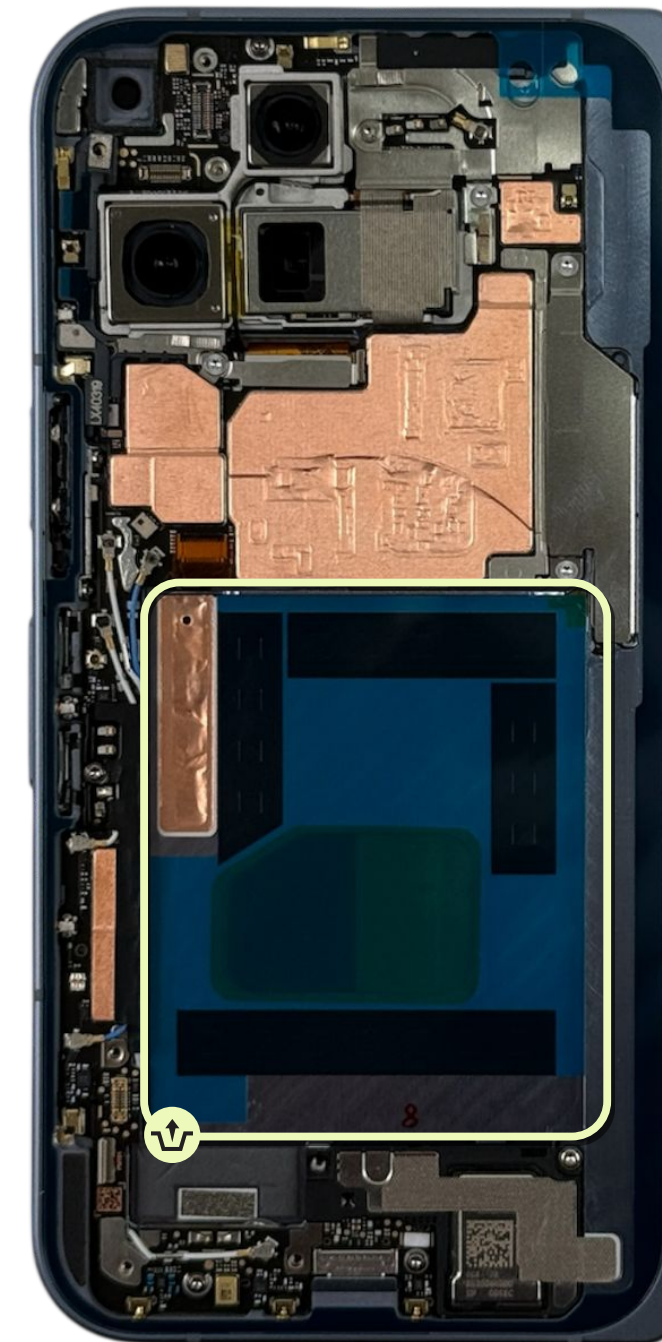

Part: multiple part numbers (base battery)

Use caution

Review all safety precautions before you begin work.

Make sure that the battery cosmetic checks are completed.

Position the base battery

- Confirm the battery model to be **GU46C**, as shown in **Fig 1**. If the model number isn't **GU46C**, please *don't* use the battery.
- Use an **adsorption bulb** with a smaller suction cup to pick up the battery.
- Align it to the **upper-right** corner of the depression and push it to upper side and right side as much as possible.
- Remove the adsorption bulb and the **white liner** carefully.

Use caution

Review all safety precautions before you begin work.

Note

The white liner ensures that the battery is in the correct position.

Don't remove it prior to the installation.

Note

Don't use the suction cup on the pull jacket.

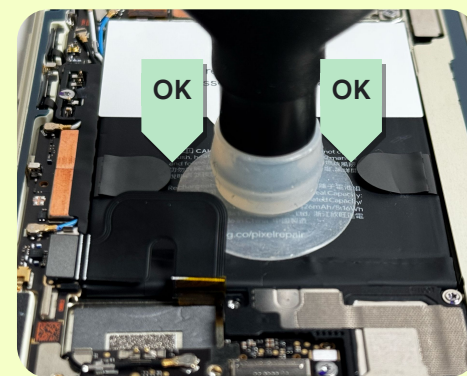

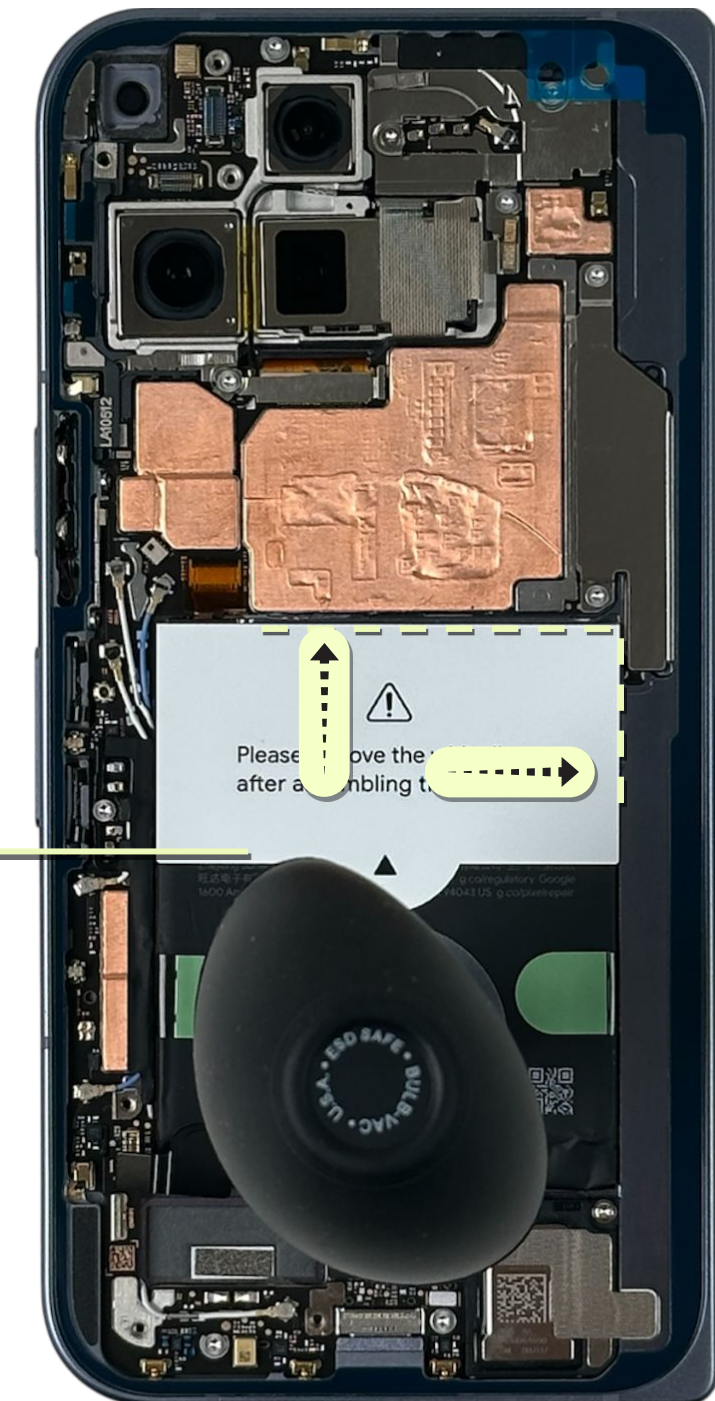

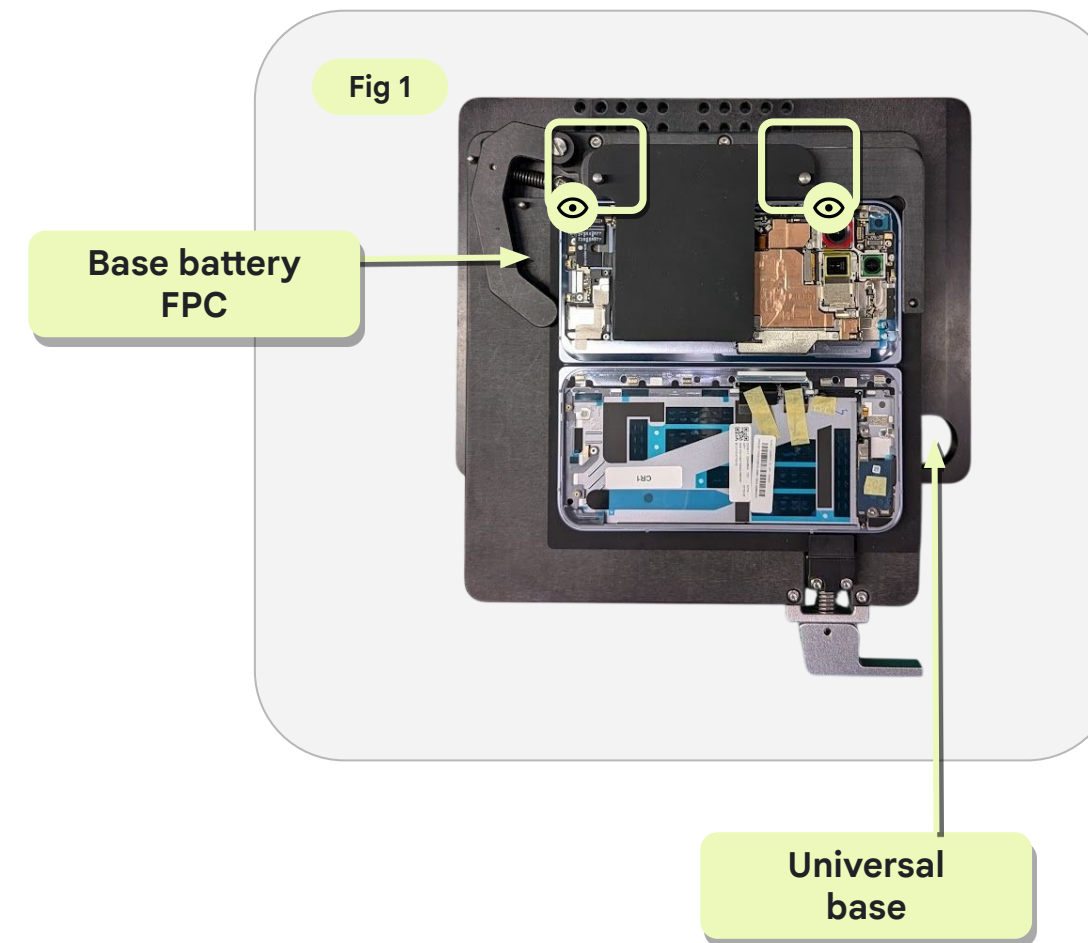

Fig 1

Press the base battery

- Keep the **universal supporting rubber #2** on the **universal holder #2**, and keep the **universal Holder limiting block #2** on top.
- Keep the **fixture** in position **B2** on the **universal base**.
- Keep the **Pixel 10 Pro Fold base battery press rubber** on top of the **universal holder #2**, as shown in **Fig 1**.
- Keep the **universal press plate 12 mm** on the **Pixel 10 Pro Fold base battery press rubber**, as shown in **Fig 2**.
- Keep it in the **universal press fixture**. Press the handle down for **25 seconds**, as shown in **Fig 3**.

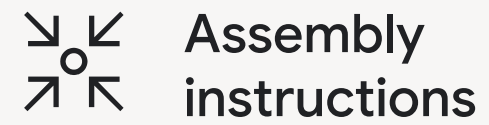

Use caution

Keep hands clear during operation.

Note

Make sure that all protective films are removed before you press.

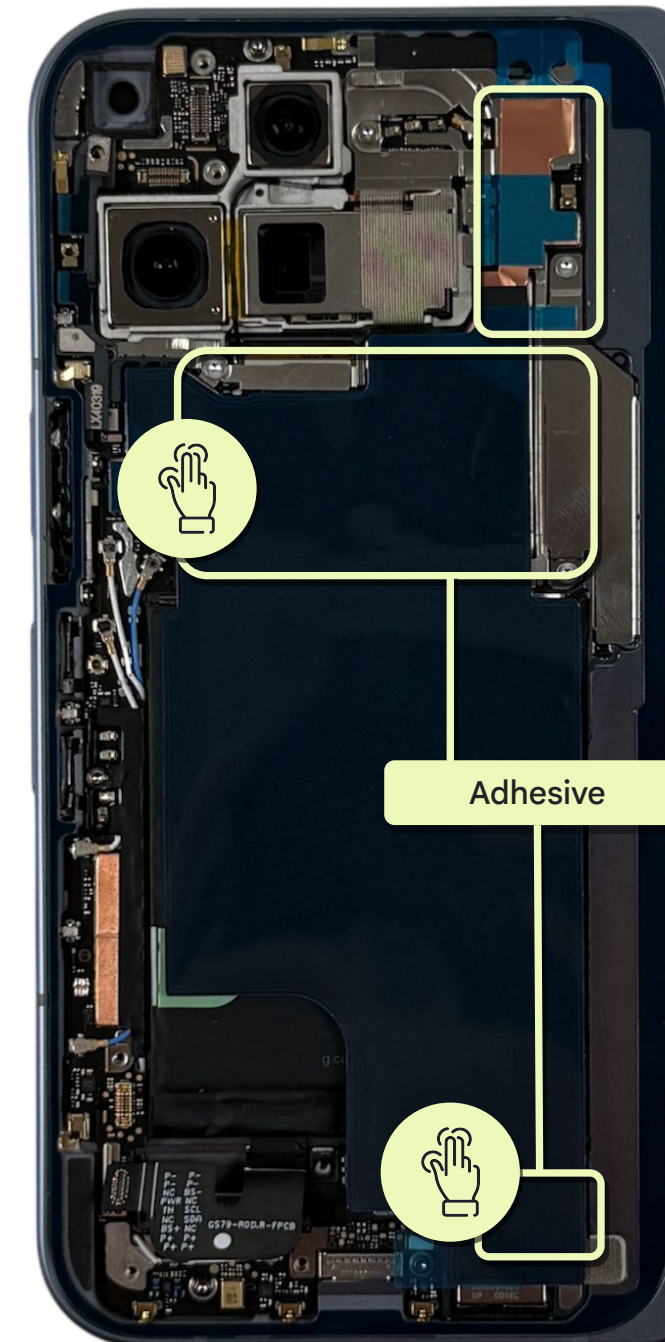

Assembly
instructions

Vibrator with cowling

Apply the graphite sheet

- Align the **graphite sheet** with the outline.
- Press down on the **adhesive** to secure it and remove air pockets.
- Remove the liner.

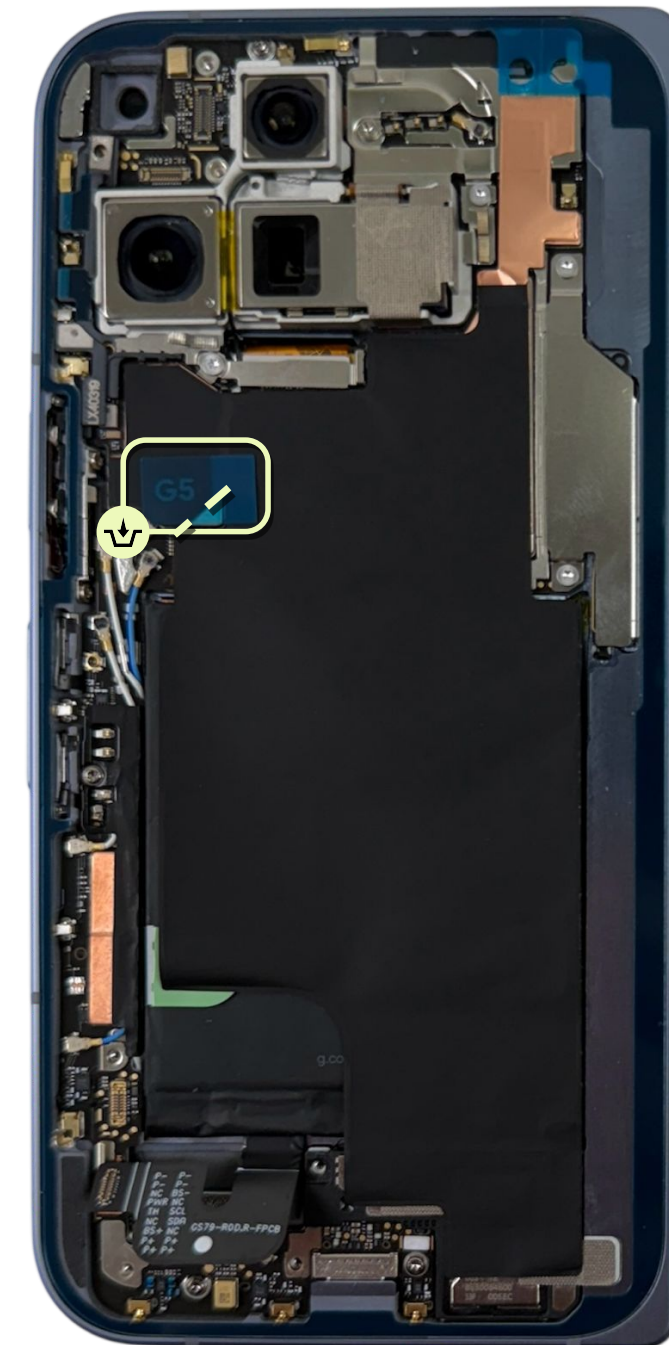

Part: G864-01067-00 (graphite sheet)

Apply the RF sponge

- Attach the **RF sponge**, to ensure that the slanted corner aligns with the slanted side of the triangle.
- Carefully remove the liner.

Part: G806-15352-00 (RF sponge)

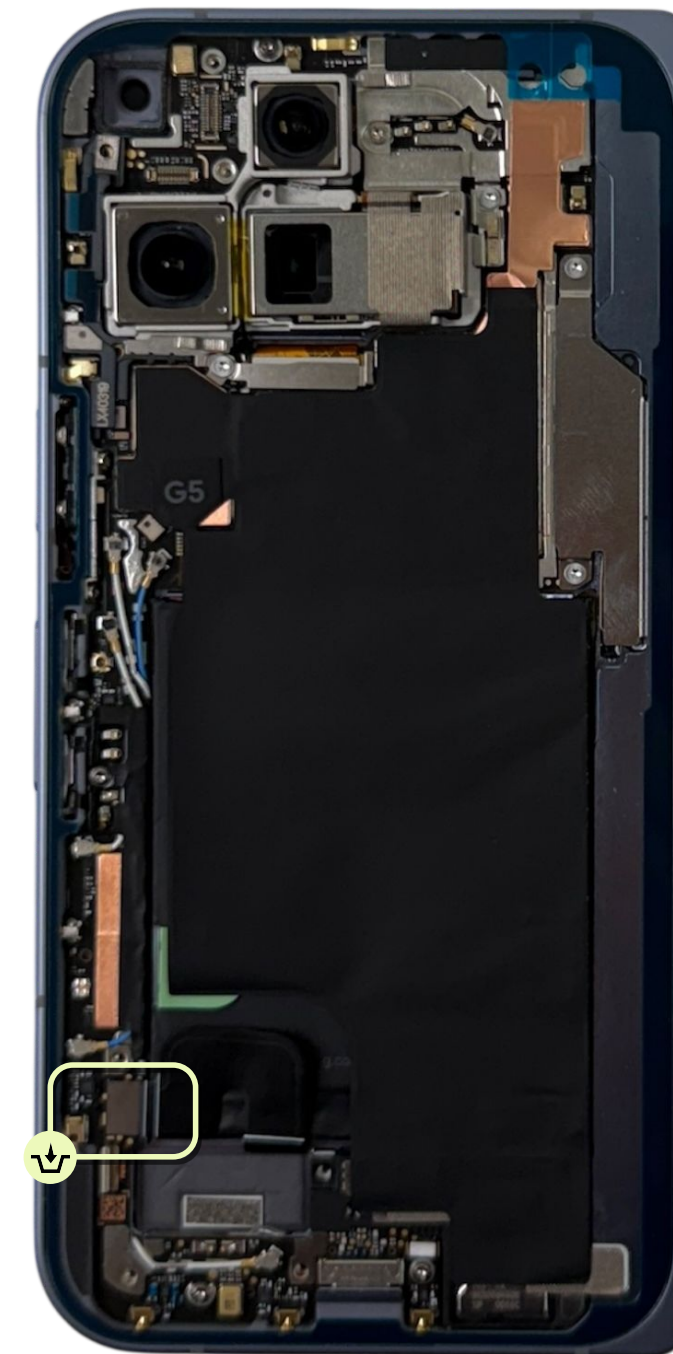

Connect to the logic board

Connect the **base battery** to the logic board.

Note

Make sure that the connector is securely attached to the logic board.

Place the vibrator with cowling

- Install the **vibrator with cowling** at an angle to the left so it goes under the hook, as shown in **Fig 1**.
- Tighten the four vibrator cowling screws.
- Tighten the screws a second time to ensure that there's a firm attachment.

Part: G949-01536-00 (vibrator with cowling)

Part: G250-08004-20 *4 (screws)

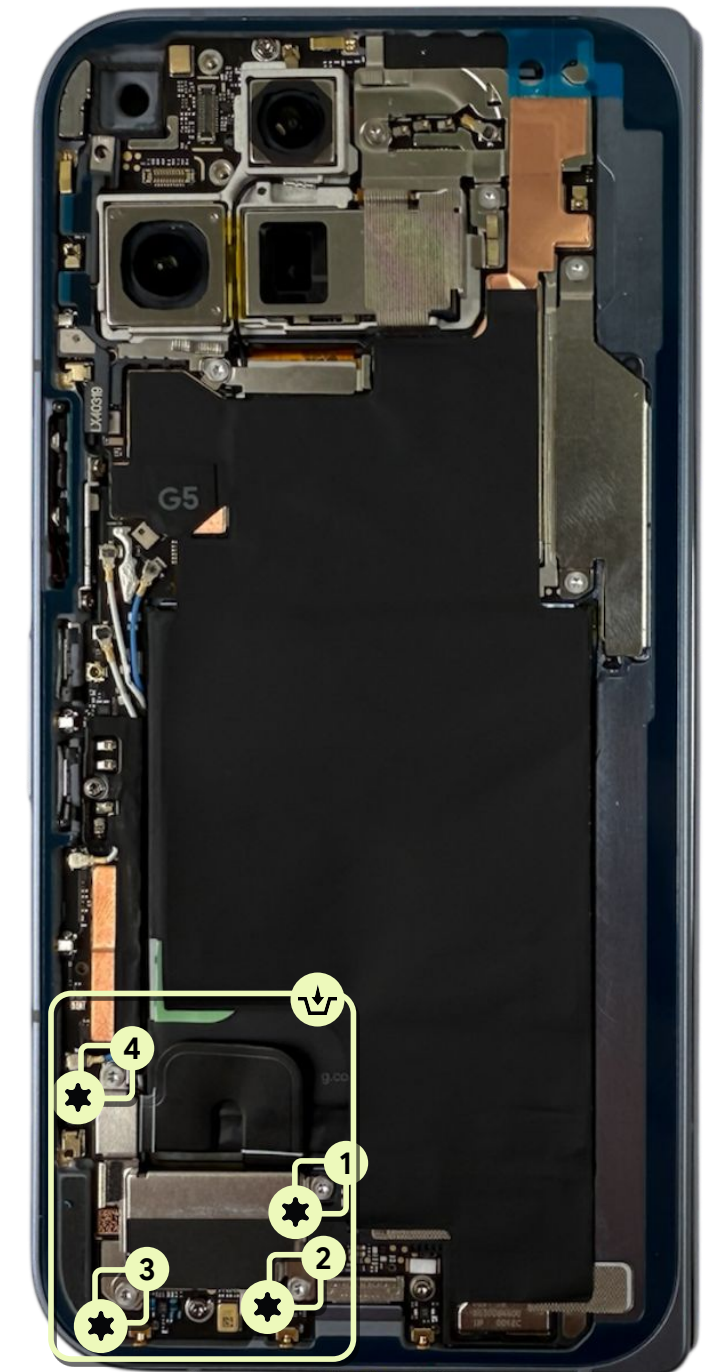

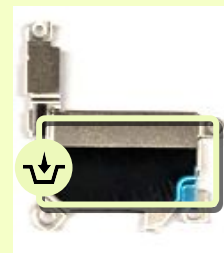

⚠ Use caution

Be careful when you use the screwdriver.
Don't damage the adjacent battery.

Incorrect use of the screwdriver might result in injuries to yourself or others, along with the damage to the battery or the product.

💡 Note

Tear off the blue liner if you use new vibrator with cowling.

 Assembly
instructions

Inner front camera

Attach the inner FCAM

- Remove the **inner FCAM cap** and **protective film** before installation, if you use a new inner FCAM or new ID sub.
- Assemble the **inner FCAM** in the **enclosure slot**.
- Connect the **inner FCAM connector** to the **logic board**.

Part: G949-01530-00 (inner front camera)

Note

Check if every connector is fully attached to the logic board.

 Assembly
instructions

BG (back glass) sub

Reuse the BG

- Use a **spudger** to remove glue from the **BG**.
- Use fingers or **tweezers** to remove large **adhesive** chunks. Repeat for any adhesive.
- If residue remains, clean the surface with a **dust-free cloth** and **IPA**.

Part: multiple part number (BG sub)

Apply the AP111 primer

- Apply **IPA** around the **BG** sub's edges with a **dust-free cotton swab**.
- Apply one round of **3M AP111 primer** around the edges with a **dust-free cotton swab**.

Part: multiple part number (BG sub)

Use caution

After the primer is applied, complete the assembly in 25 minutes.

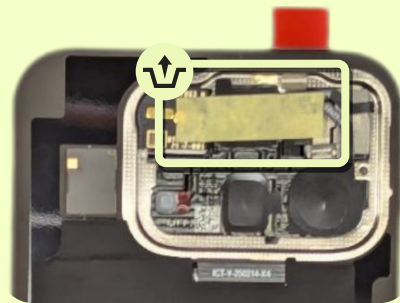

Connect the flam board

- Place the **BG** on top of the **enclosure** and prop up the BG sub.
- Apply even pressure with **tweezers** to connect the **flam board** to the **logic board**.

Note

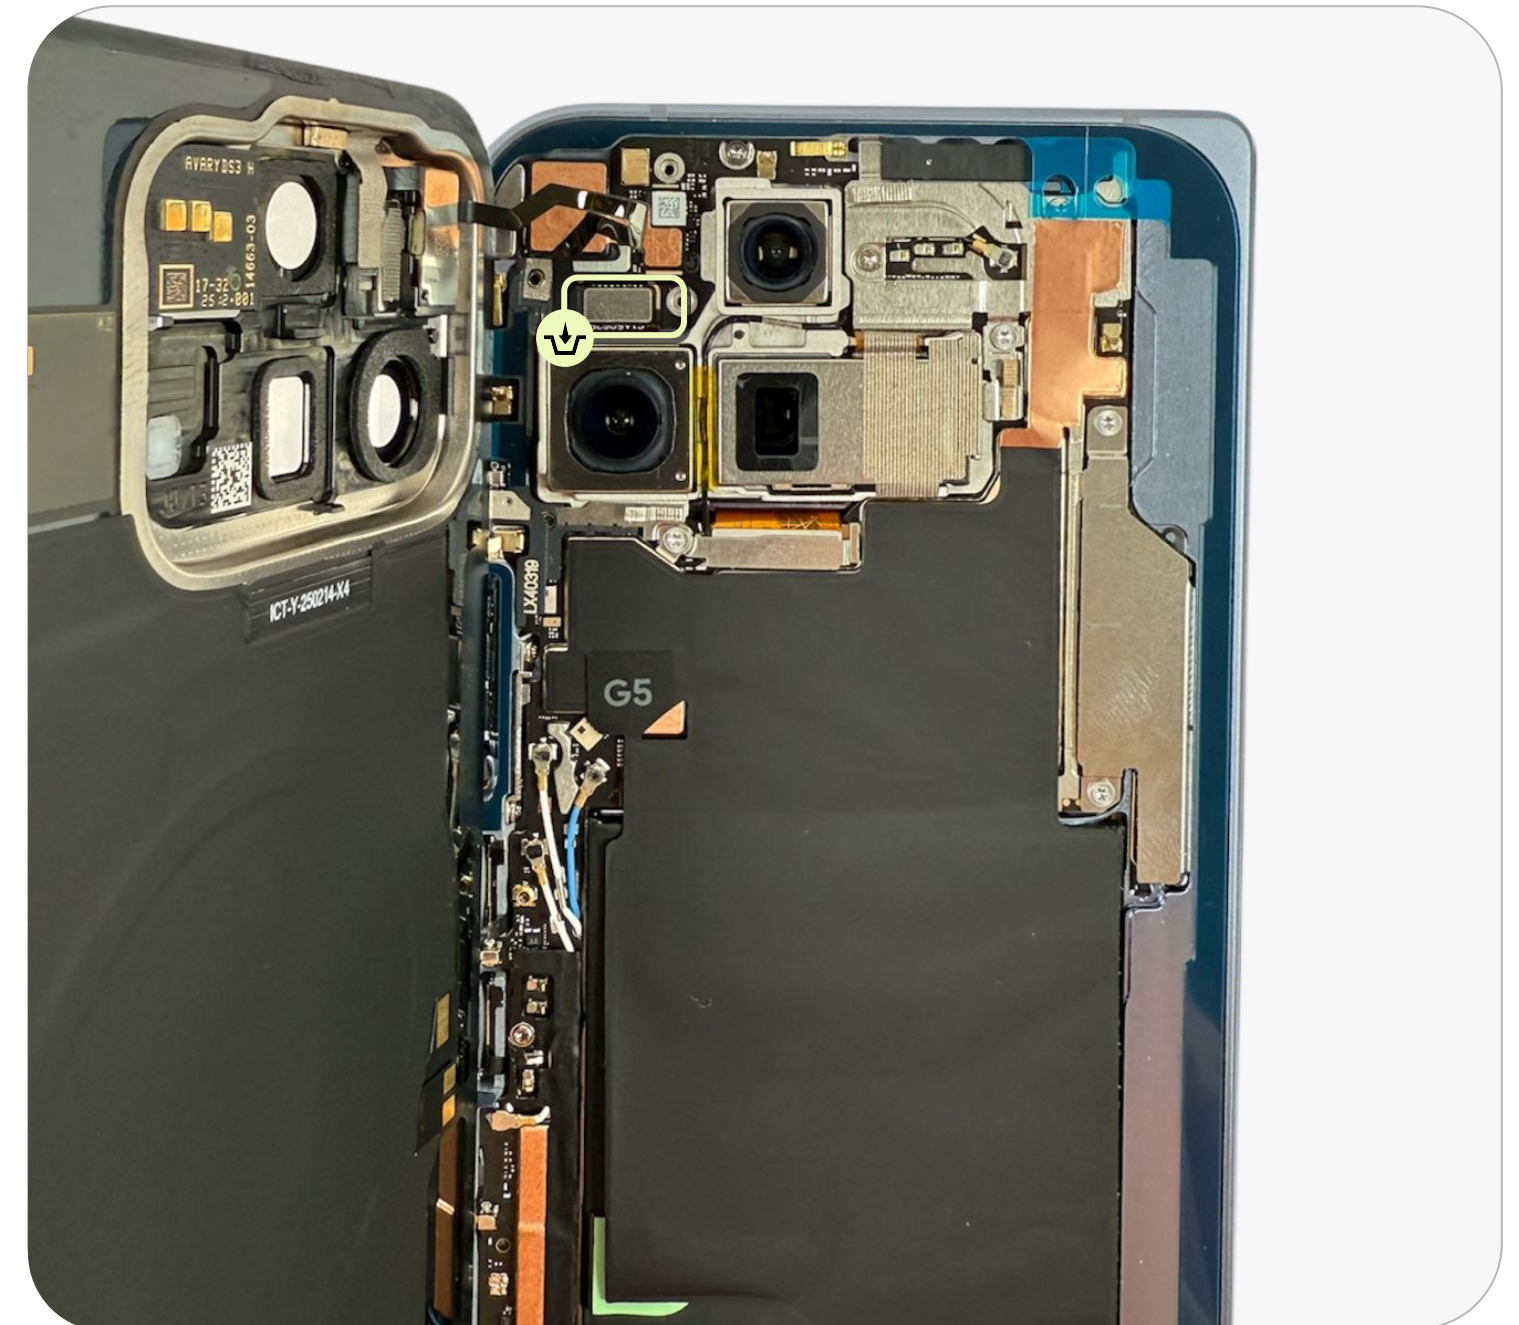

Remove masking tape from a new BG.

Use caution

When you attach the BG, **don't** damage or deform the FPC.

Check if every connector is fully attached to the **logic board**.

Check the display

- Remove the **inner display process protective film**.
- Power on and **wait at least 10 seconds** to check if the device works properly. Power off after check.

Use caution

*Don't touch the ID's TP until it turns to the **welcome page** since touch panel self calibration is in progress.*

Follow the instruction:
TP calibration note

Reuse the inner FCAM cowling

- Apply a new **alignment mylar** to the designated position, as shown in **Fig 2**.

Part: G730-09675-00 (inner FCAM cowling)

Part: G806-16220-00 (alignment mylar)

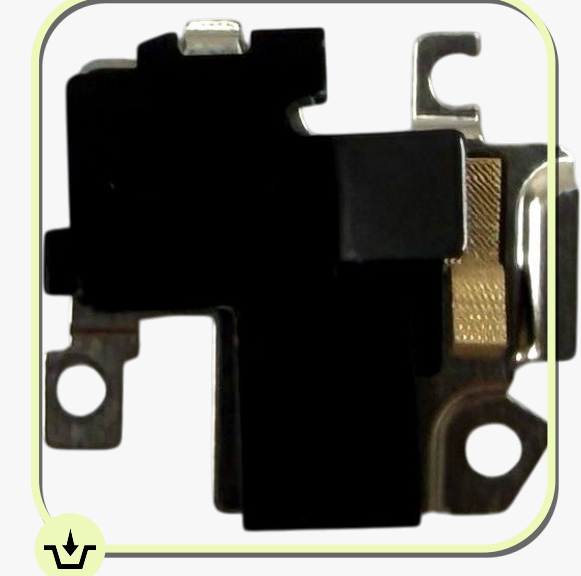

Note

The inner FCAM cowling comes with the alignment mylar. Perform this step only when you reuse the part.

Fig 1

Fig 1

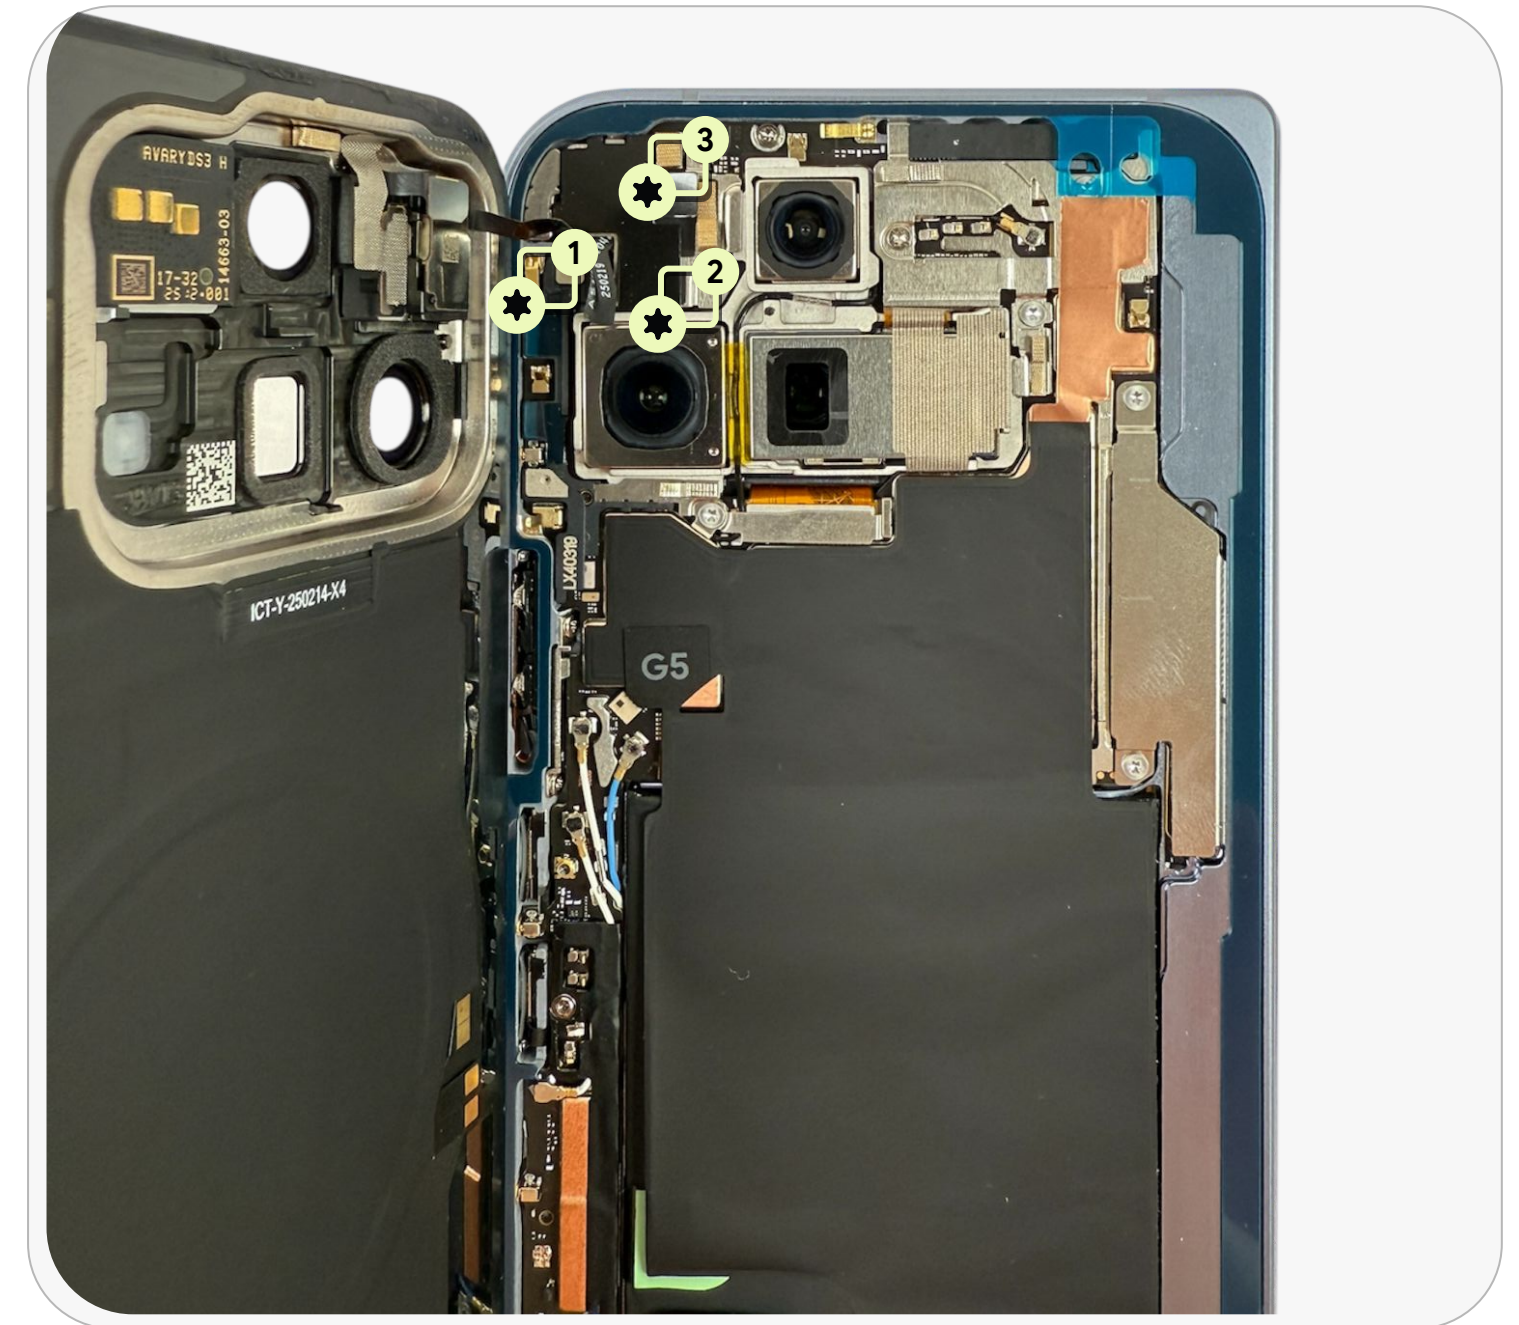

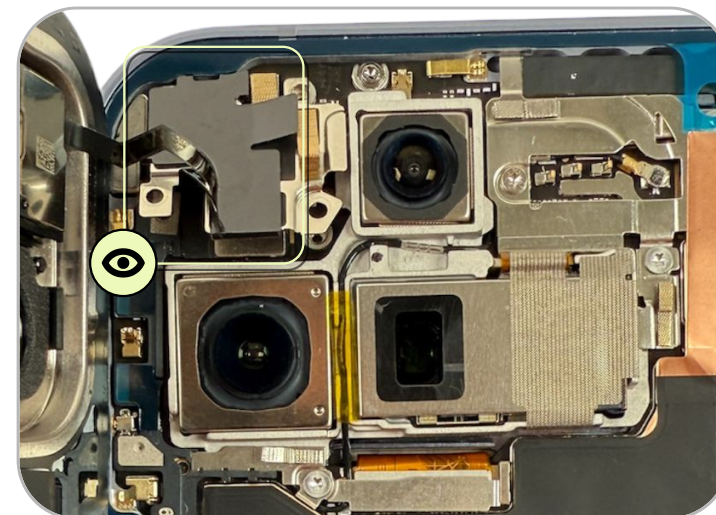

Secure the inner FCAM cowling

- Place the **FCAM cowling** on the **flam board FPC**, to cover the **connector**.
- Tighten the screws with a **torx plus 3IP screwdriver**.
- Tighten them again for secure placement.
- Remove the alignment mylar.

Part: G730-09675-00 (inner FCAM cowling)

Part: G250-08004-20 *3 (screws)

Remove the caps and liners

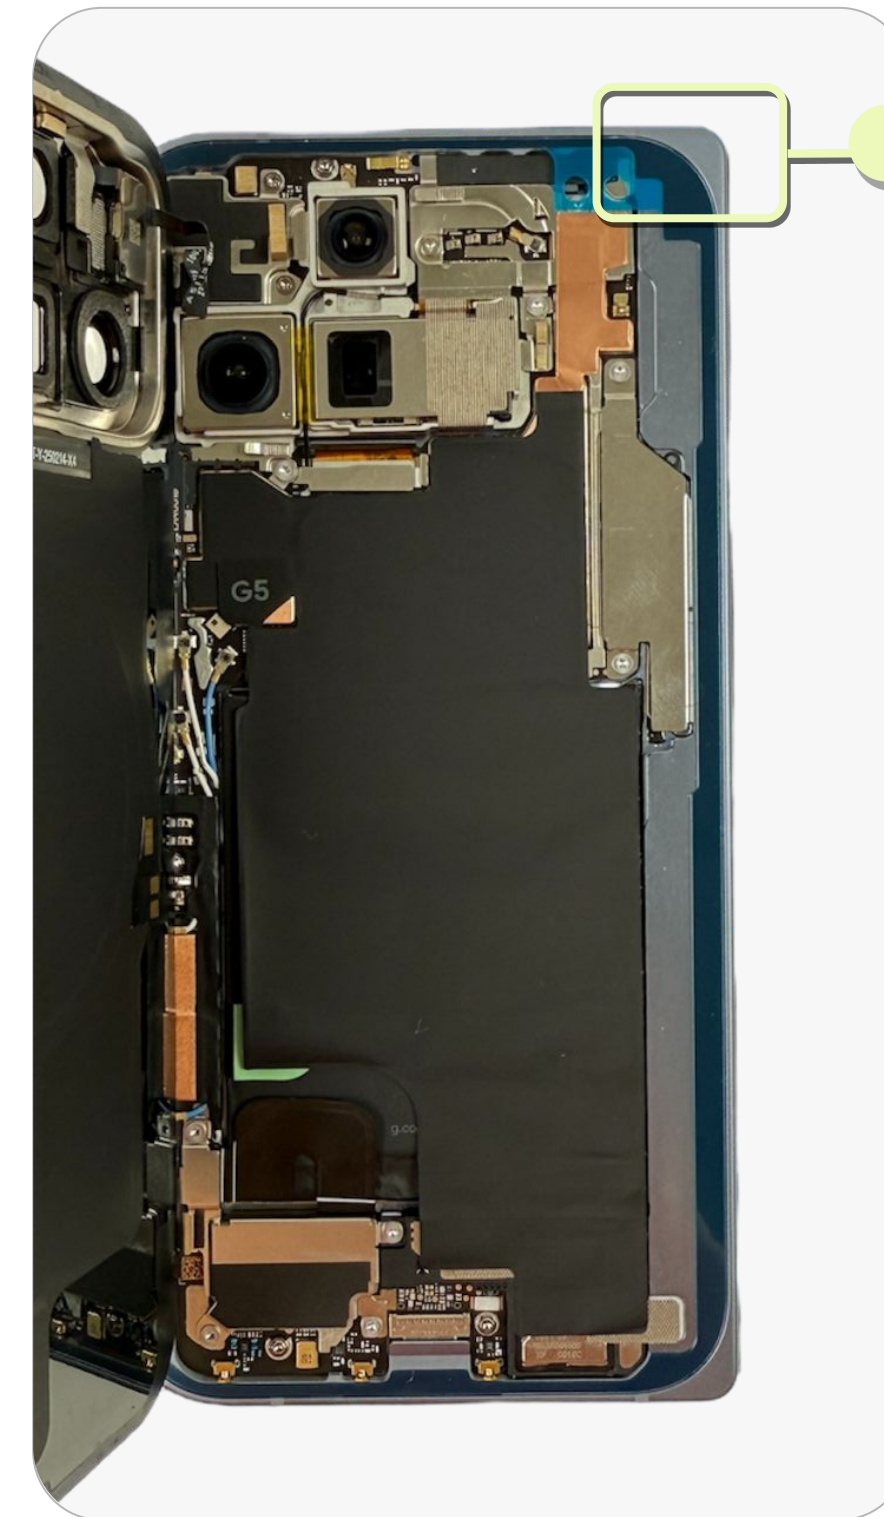

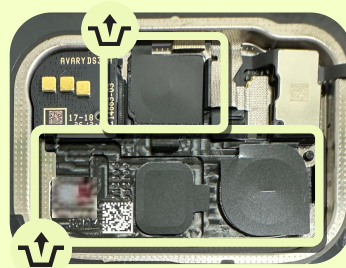

- Use **tweezers** to remove the **RCAM caps** from the new RCAM modules.
- Use **tweezers** to grab the **second layer of the BG liner** and two ID cowling blue liners carefully pull it away.

Part: G806-14457-00 (BG PSA)

Note

Remove RCAM lens and vent liner from a new BG.

Pick the tab here.

Press the BG

- Align the **BG** vertically on the **enclosure**.
- Press around it with both hands.

Note

Press the top middle side first, then follow with the two long sides and the bottom side.

Press the BG

- Place the **universal supporting rubber #2** on the **universal holder #2**, and place the **universal holder limiting block #2** on top.
- **Place the fixture** in position **D2** on the **universal base**.
- Apply the **Pixel 10 Pro Fold BG press rubber** on top of the **universal holder #2**, as shown in **Fig 1**.
- Place the **universal press plate 12 mm** on the press rubber, as shown in **Fig 2**.
- Place it in the **universal press fixture** and press the handle down for **45 seconds**, as shown in **Fig 3**.

Use caution

Keep hands clear during operation.

Note

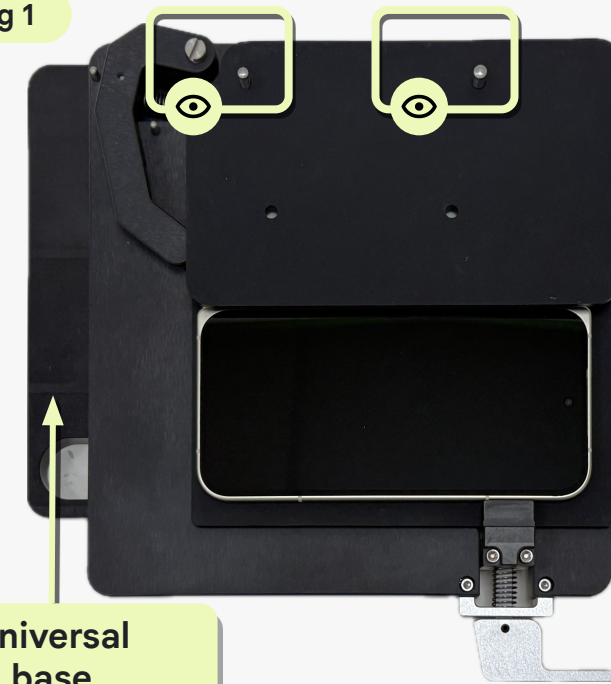

Make sure that all protective films are removed before you press.

Note

Make sure that the Pixel universal holder is in the right position.

Lower board

Flip battery

Upper board

Inner display sub

OD (outer display) sub

The outer display module is connected to the lower board, so be careful with the flex when you open the device up.

Use caution

Use safety gloves when you handle damaged displays as splinters during removal could cause injury.

Apply protective film to broken glass before removal.

Review all safety precautions before you begin work.

Prerequisites

Before you begin a repair, be sure to **power off** the device and disconnect any charging cables.

Tools

Pixel 10 Pro Fold main holder

Pixel 10 Pro Fold OD press rubber

Pixel universal base

Universal press plate 12 mm

Universal press fixture

Opening pick

Large suction cup

Torx plus 3IP screwdriver

Tweezers

Spudger

G250-08005-21

OD cowling

G730-09622-01

OD PSA

G806-14480-00

Locate the driver IC

- Before you remove the **outer display module**, be aware that there's a **driver IC** underneath.
- Avoid any damage to the **driver IC (COF area)** during the disassembly process.

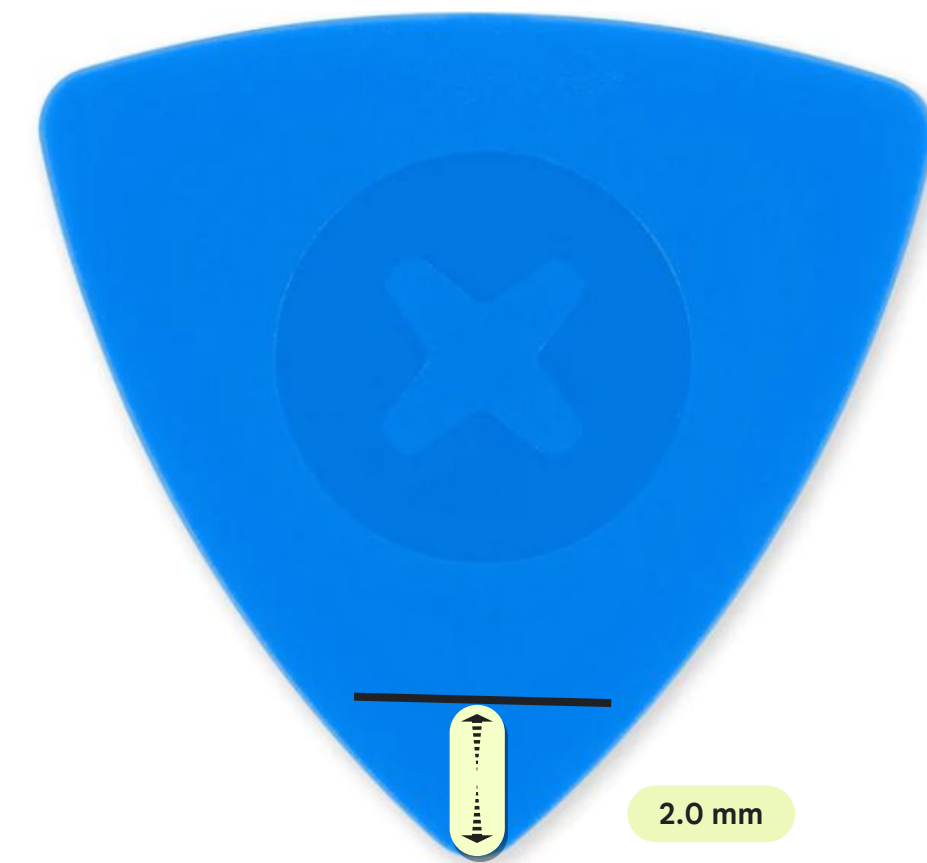

Mark the opening pick

- Use an opening pick to separate the OD from the enclosure. If you insert it too far, it could damage your device.
- Measure 2.0 mm from the tip and mark the opening pick with a permanent mark.

Use caution

Follow the steps to mark your pick and prevent damage.

Thickness: less than 1.0 mm

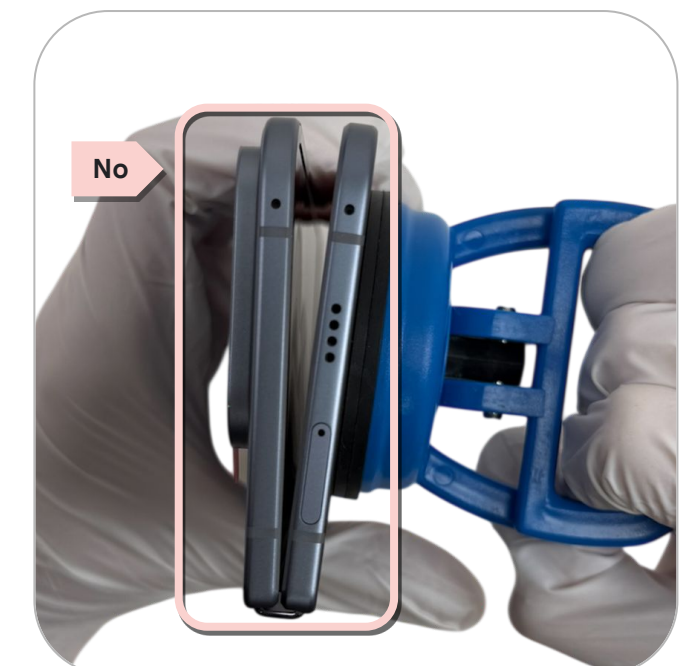

Separate the OD

- Apply a suction cup to the OD, as close to FCAM side, as shown in **Fig 1**.
- Use one hand to firmly hold the device. With the other hand, strongly pull up the large suction cup to create a gap between the OD and the enclosure, as shown in **Fig 2**. Make sure that the device isn't open.
- Insert the opening pick into the gap, as shown in **Fig 3**.

Use caution

Don't insert your opening pick deeper than 2 mm when you separate adhesive, as you risk damage to the display.

Detach the OD

- Slide your **opening pick** clockwise.
- Open toward the **hinge** to separate the adhesive.
- Turn over the OD. Use the **suction cup** to hold it after the device is open.

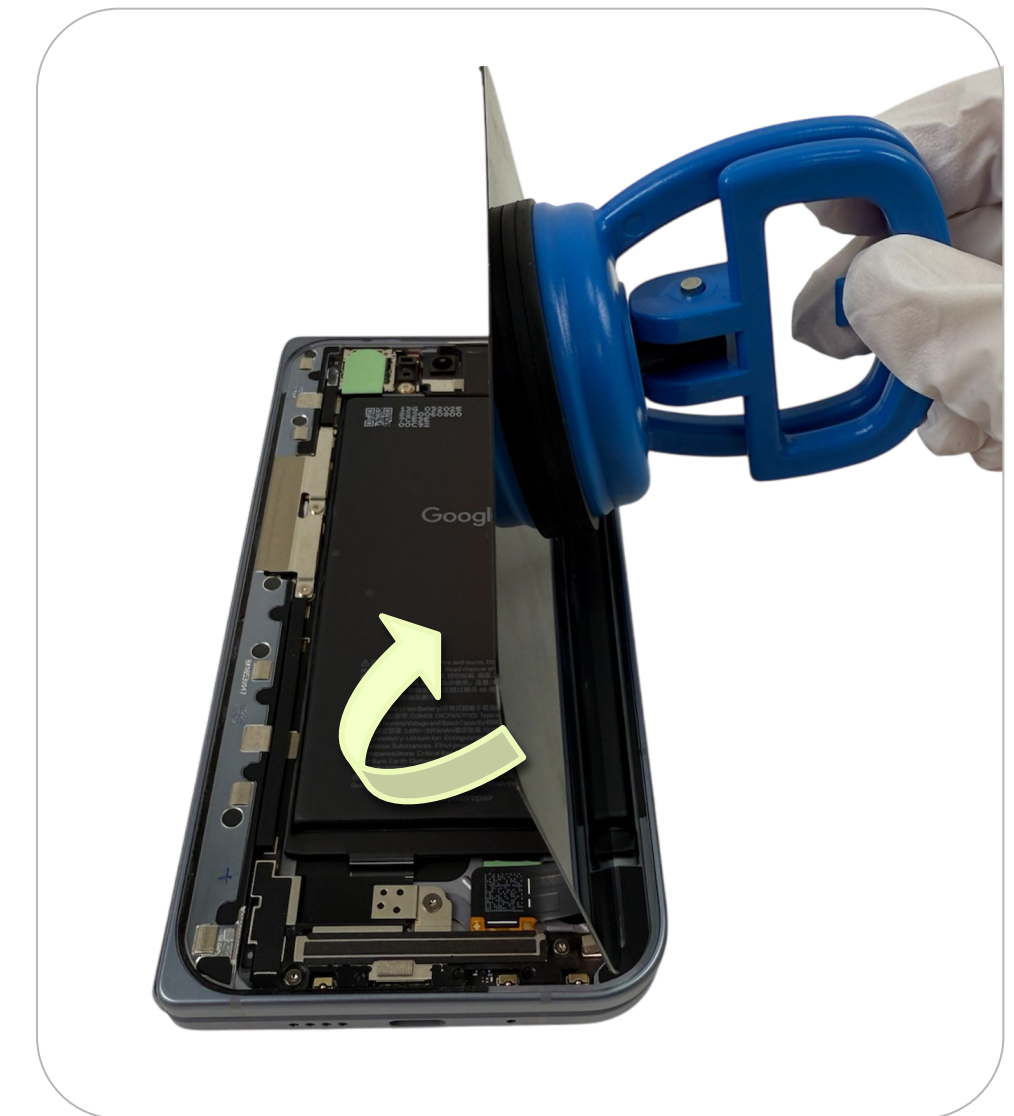

Disassembly sequence

1 (insert opening pick with 2.0 mm) → 2 → 3 → 4 → 5

Use caution

Don't fully remove the OD yet, as it's still connected to the device by the OD flex.

Remove the OD cowling

- Remove **three OD cowling screws** with a torx plus 3IP screwdriver, as shown in **Fig 1**.
- Remove the **OD cowling**.

Part: G250-08248-00 (screw)

Part: G250-08005-21 (screw*2)

Part: G730-09622-01 (OD cowling)

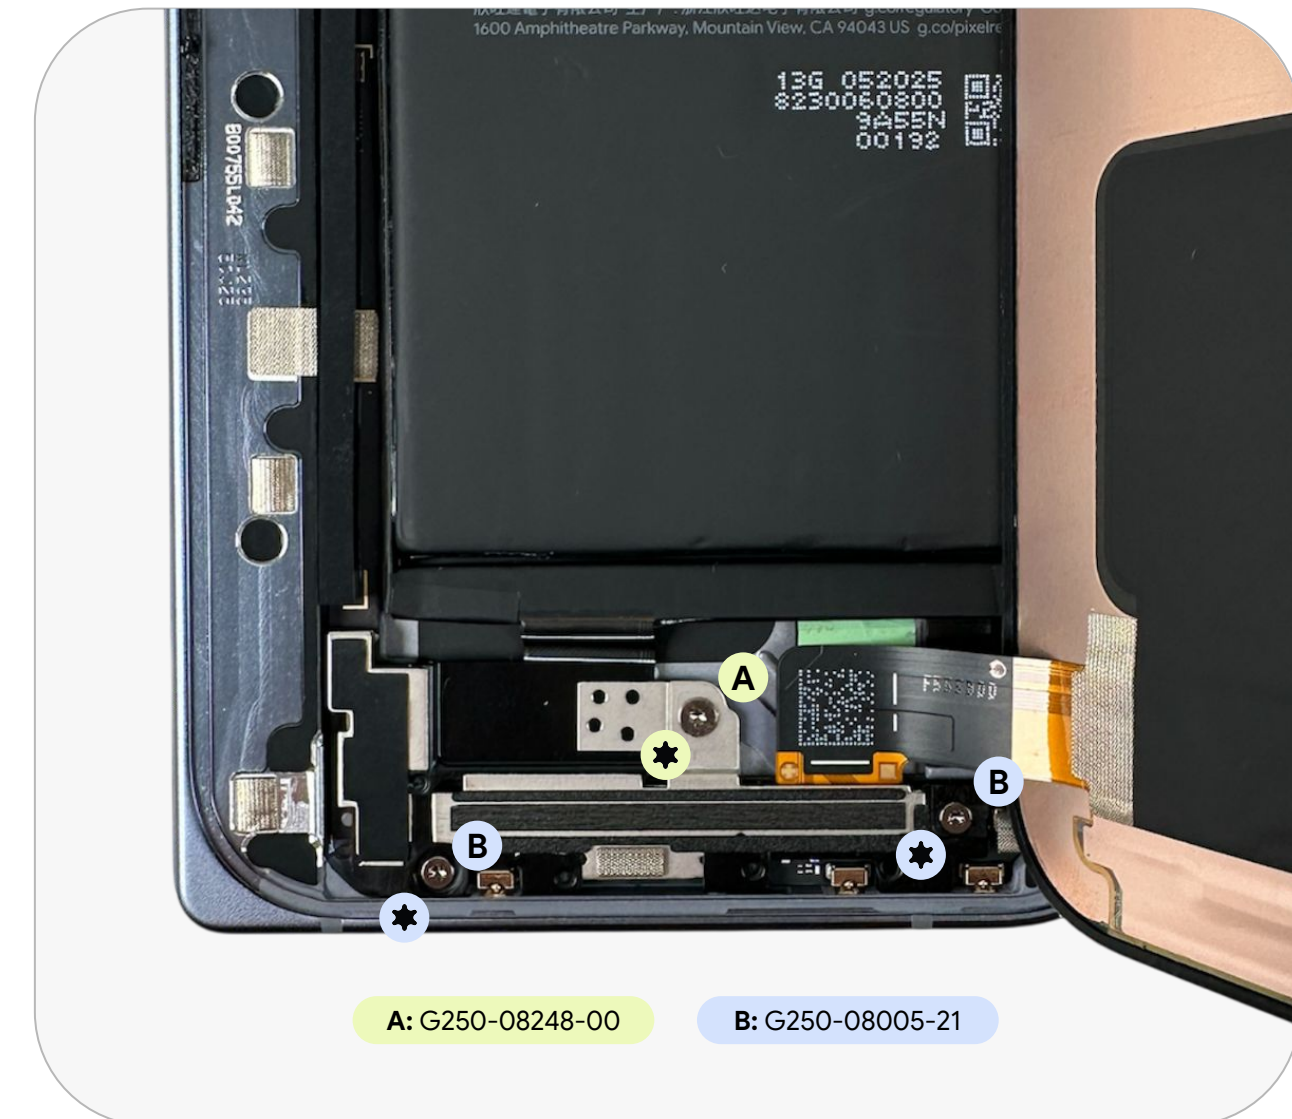

Note

Don't reuse the screws.

Use caution

Avoid use of sharp objects or tools to prevent damage to the **battery**.

Finished! Want assembly instructions? →

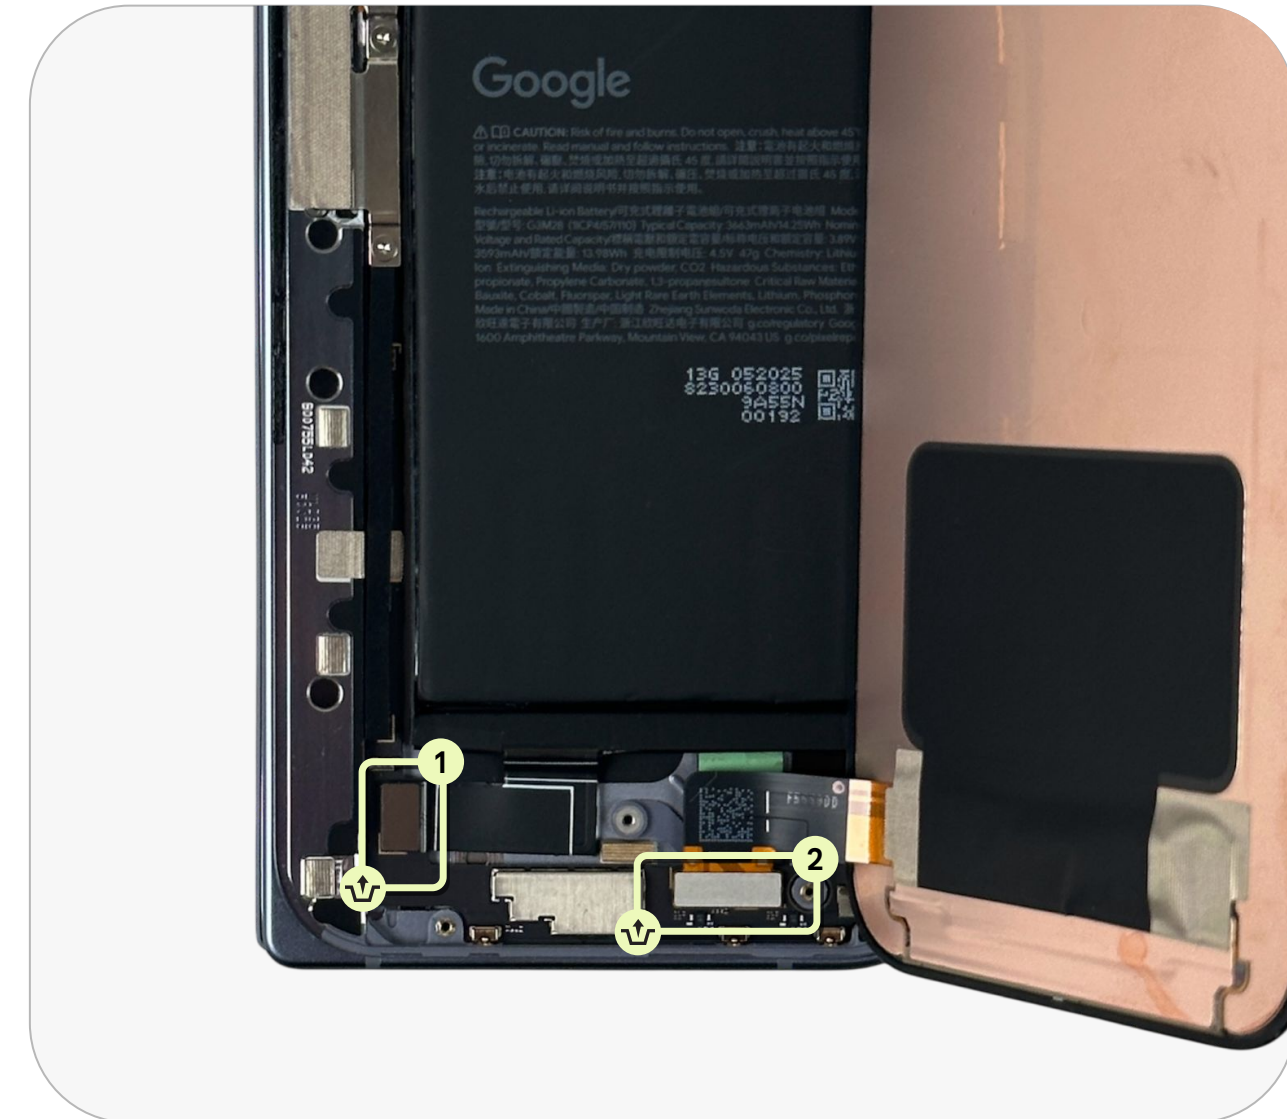

Disconnect the OD

- Disconnect the **flip battery** with a spudger.
- Loosen the **OD** connector with a spudger and then remove the **OD**.

Note

Use a spudger to avoid damage to the components.

Lower Board

Upper Board

Outer Front Camera

Flip Battery

Inner Display Sub

Remove the screw, rubber and tape

- Remove the **upper board screw** with a **torx plus 3IP screwdriver**.
- Remove the **rubber** and the **conductive tape** with a **spudger**.

Part: G250-08003-10 (screw)

Part: G806-15617-00 (upper rubber)

Part: G806-14472-00 (conductive tape)

Note

Don't reuse the parts.

Use caution

Avoid use of sharp objects or tools to prevent damage to the **battery**.

Remove the upper board

- Slightly lift the **upper board** with a spudger, as shown in **Fig 1**.
- Insert a 0.25 mm **feeler gauge** and slide downwards to cut the **PSA** attached to the upper board near the left edge of the enclosure, as shown in **Fig 2**.
- Gently remove the **upper board** with your bare hand.

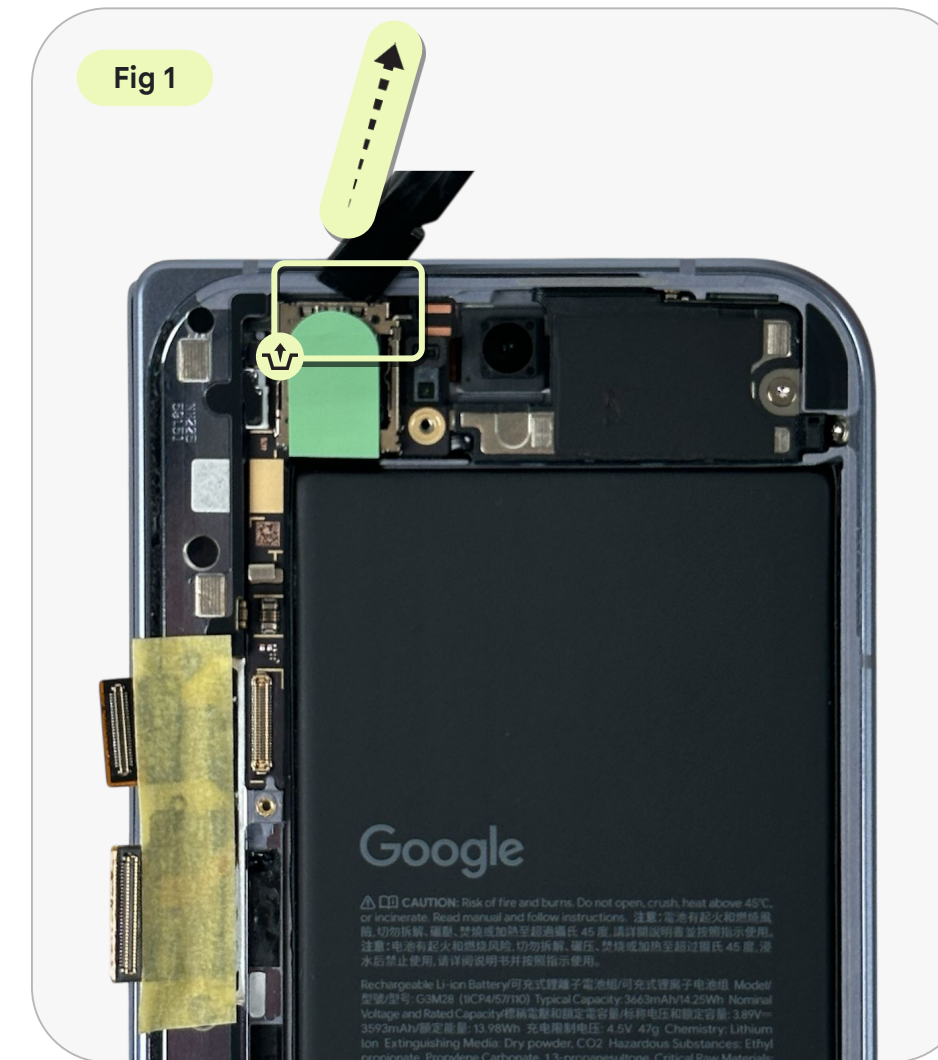

Part: G949-01535-00 (upper board)

Use caution

Avoid use of sharp objects or tools to prevent damage to the **battery**.

There's one **adhesive area** behind the upper board. Handle with care to prevent damage or distortion.

Finished! Want assembly instructions? →

Inspect the P-sensor rubber

- Inspect the **P-sensor rubber**.
- If it's damaged, remove it. If it *isn't* damaged, leave it in place.

Part: G806-14452-01 (P-sensor rubber)

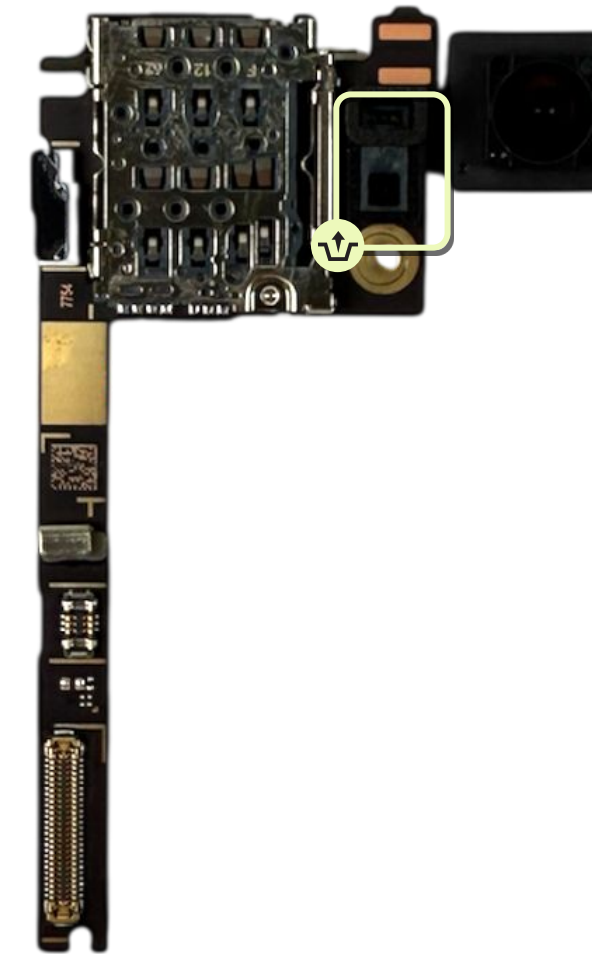

Note

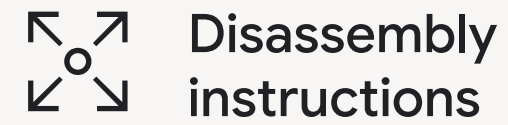

Don't reuse the P-sensor rubber after removal.

Use caution

Skip this step if the P-sensor rubber is undamaged or intact.

Outer front camera

The outer front camera isn't fastened to the enclosure, it's simply connected to the upper board.

Use caution

Review all safety precautions before you begin work.

Prerequisites

Here's the list of components that you should remove first:

- **Outer display**
- **Upper board**

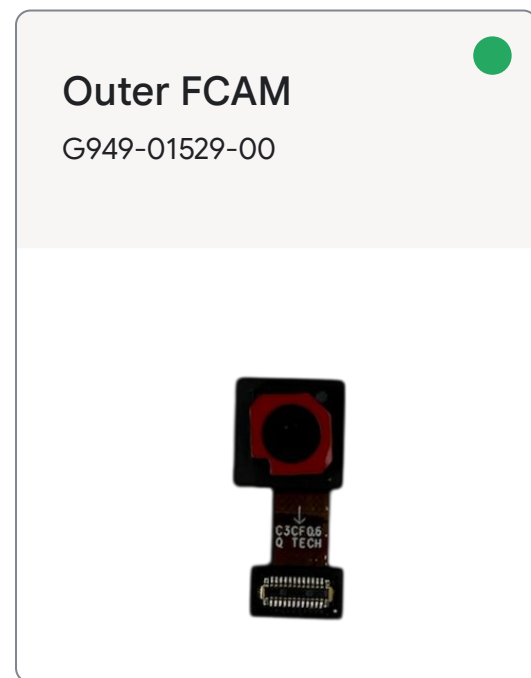

Tools

Spudger

 Required parts

Outer front camera

Here's the list of parts for the outer front camera disassembly.

Reuse indications

Finished! Want assembly instructions? →

Remove the outer front camera

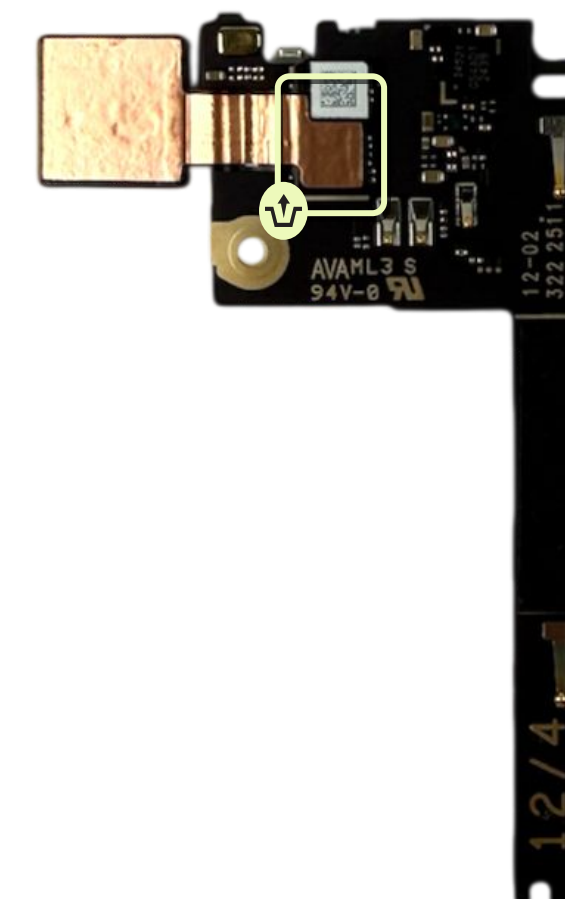

Disconnect the **outer front camera** with a spudger.

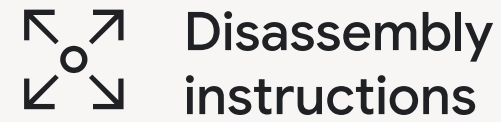

Part: G949-01529-00 (outer front camera)

Note

Use a spudger to avoid damage to the components.

Flip battery

Use caution

Use caution if you engage in repair.

When you open or repair the device, be careful of electric shock, device damage, fire and personal injury risks, and other hazards.

Before you service the product, read the full set of **precautions** in this document.

Battery handling

- Never bend, dent, puncture, or use tools to pry the battery.
- Store batteries in the replacement part packaging as soon as possible after removal to prevent damage.
- If a battery begins to vent, cover it in sand or use gloves and tongs to keep the battery in a fire safe container as soon as possible.
- Take care to prevent shorting of battery terminals or battery damage, as it could cause fire or overheating.
- Dispose of the battery according to local regulations.

Confirm before you proceed

- Battery is fully discharged and the device is disconnected from all power sources.
- Inspect the battery to see whether the phone battery shows signs of swelling, damage, or if the phone feels hot or emits a strong odor. If so, *don't* attempt disassembly. Reach out to Google customer support instead.
- Take care, not to expose the phone or its components to liquids after disassembly.

Flip battery

We recommend that you use the universal disassembly fixture to hold the device when the battery removal is in process.

It's recommended to remove the battery with a pull jacket.

Use caution

Review all safety precautions before you begin work.

Prerequisites

Here's the list of components that you should remove first:

- **Outer display**
- **Lower board**

Front

Back

Front

Back

Note

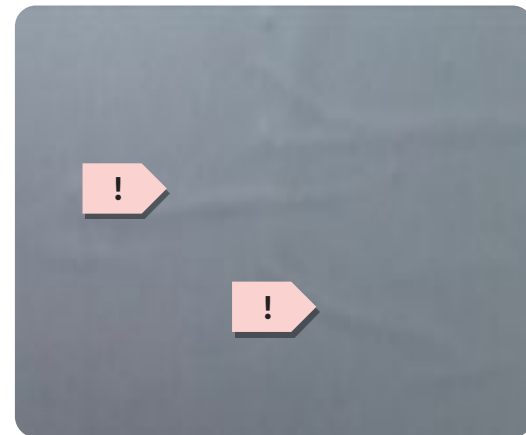

1. Always replace the base and flip batteries at the same time with the correct model name which is the same previous foldable phone projects.
2. Make sure that the new base and flip battery are from the same cell source.

Use
caution 

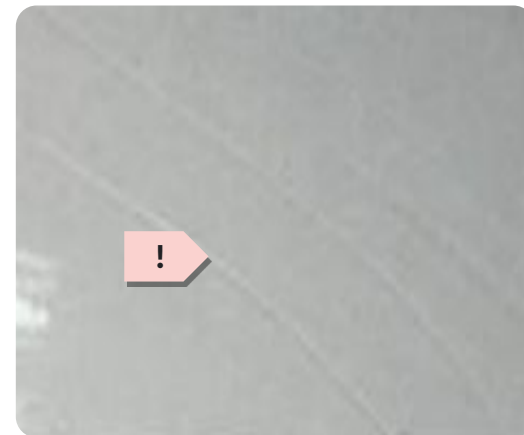

Examples of unacceptable battery conditions that aren't suitable for repair

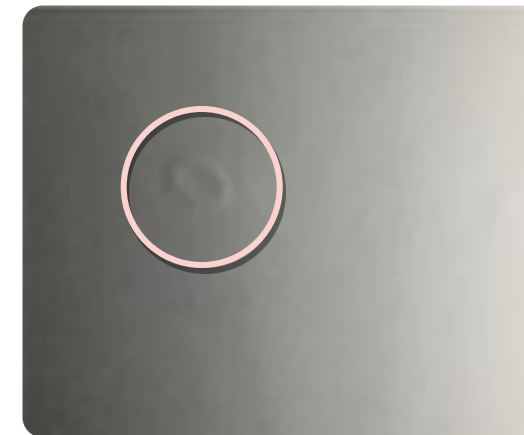

Pouch damage

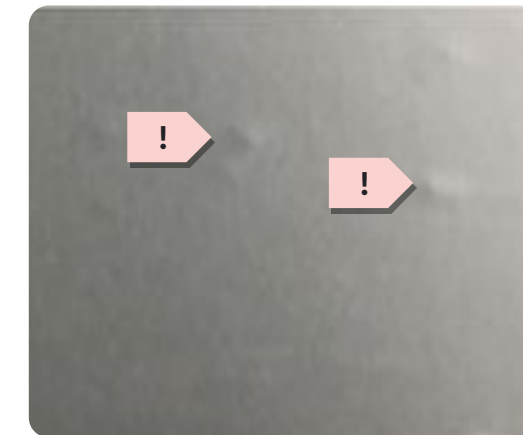

Line protrusion

Scratch

Contamination mark

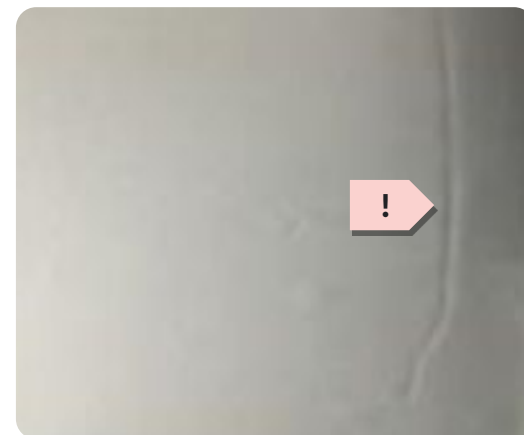

Dot protrusion

Dent

Bubbling

Imprinted line

Swelling or electrolyte leakage

*These are examples of potentially dangerous battery conditions but *don't* reflect all possible dangerous conditions. Follow the general safety guidance outlined in this document.

Release the pull tab and adjust pull jacket

- Slightly pull the **pull tab** downward with tweezers and wrap it around the tweezers. Repeat to release it from under the **flip battery**, as shown in **Fig 1**.
- Partially the pull jacket is folded under the green ends. Unfold and pack it to cover partial of the green tab by **masking tape (size: 10 mm * 20 mm)** to strengthen handling, as shown in **Fig 2**.
- Pull up the upper side of the jacket to lift up the battery a little bit and then move the jacket to the left of the battery. Stop at the yellow line, as shown in **Fig 2**.

Part: G806-17439-01 (bond PSA)

Part: G806-14434-00 (pull jacket)

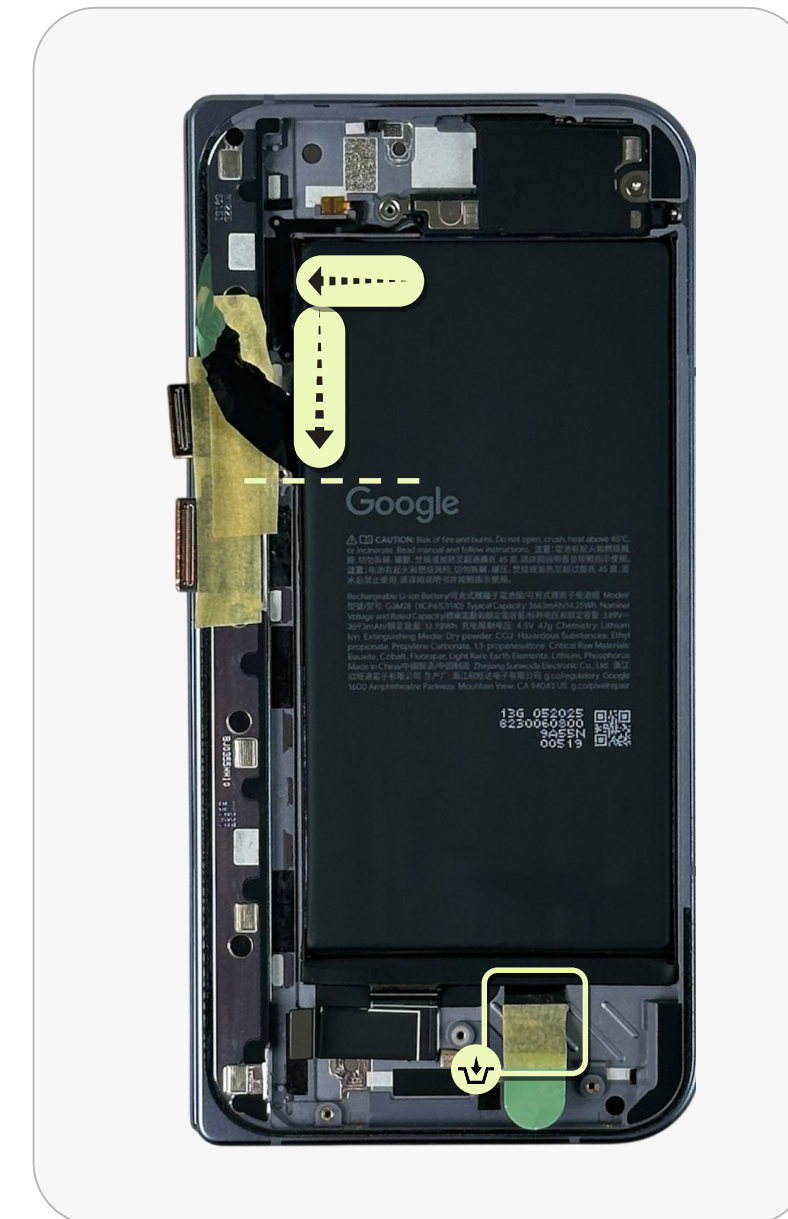

Use caution

Avoid use of sharp objects or tools to prevent damage to the **battery**.

Note

Add tape to the flip bridge cowl area to protect the pull jacket from sharp objects, ensuring it moves freely.

Outer Display

Lower Board

Upper Board

Outer Front Camera

Flip Battery

Inner Display Sub

Soften the adhesive

With the device unfolded, place the device **ID** face down on the heat plate set to **158°F (70°C)** for **10 minutes** to soften the **flip battery adhesive**.

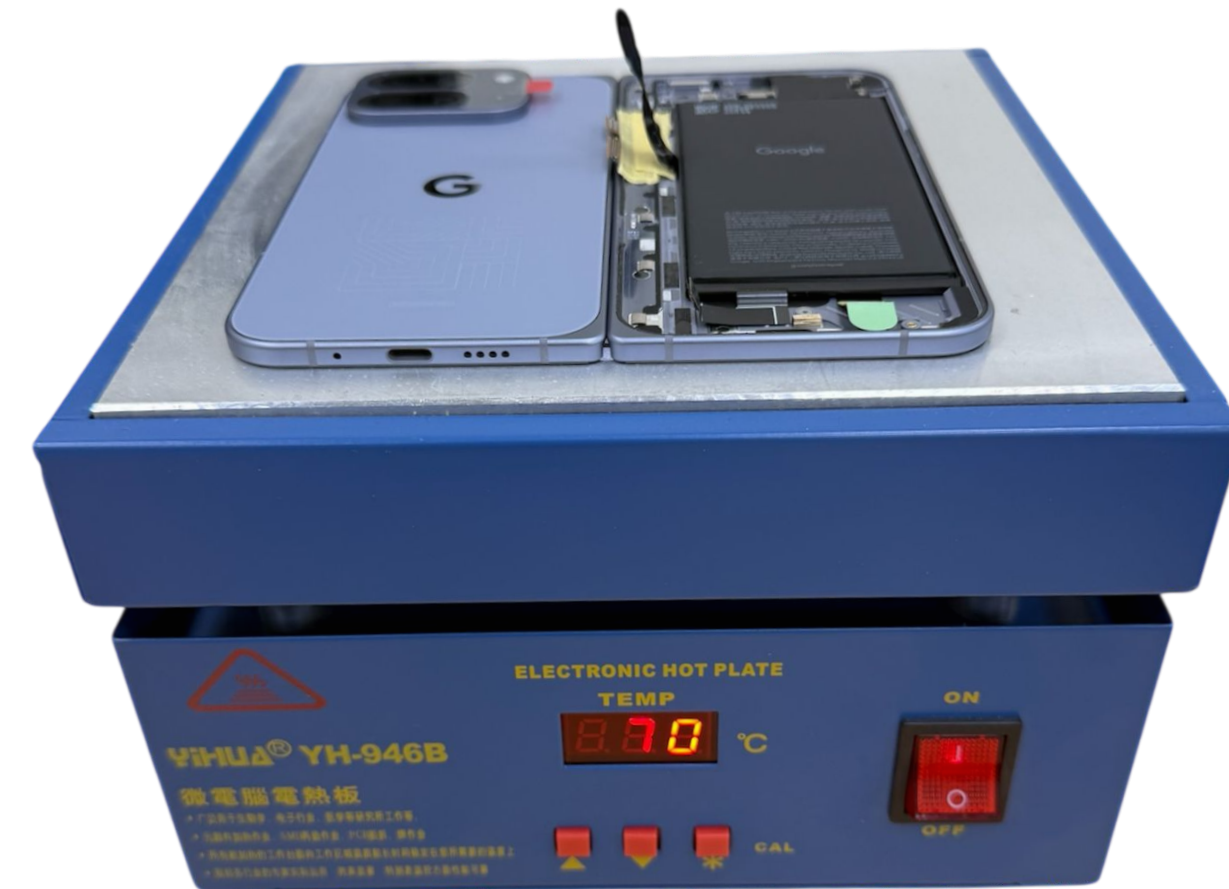

Use caution

The heat plate is a hot surface. Use caution as it could cause burns.

Use caution

Use safety gloves to handle damaged displays as they could splinter during removal and cause injury. Apply protective liner to broken glass before removal.

Review all [safety precautions](#) before you begin work.

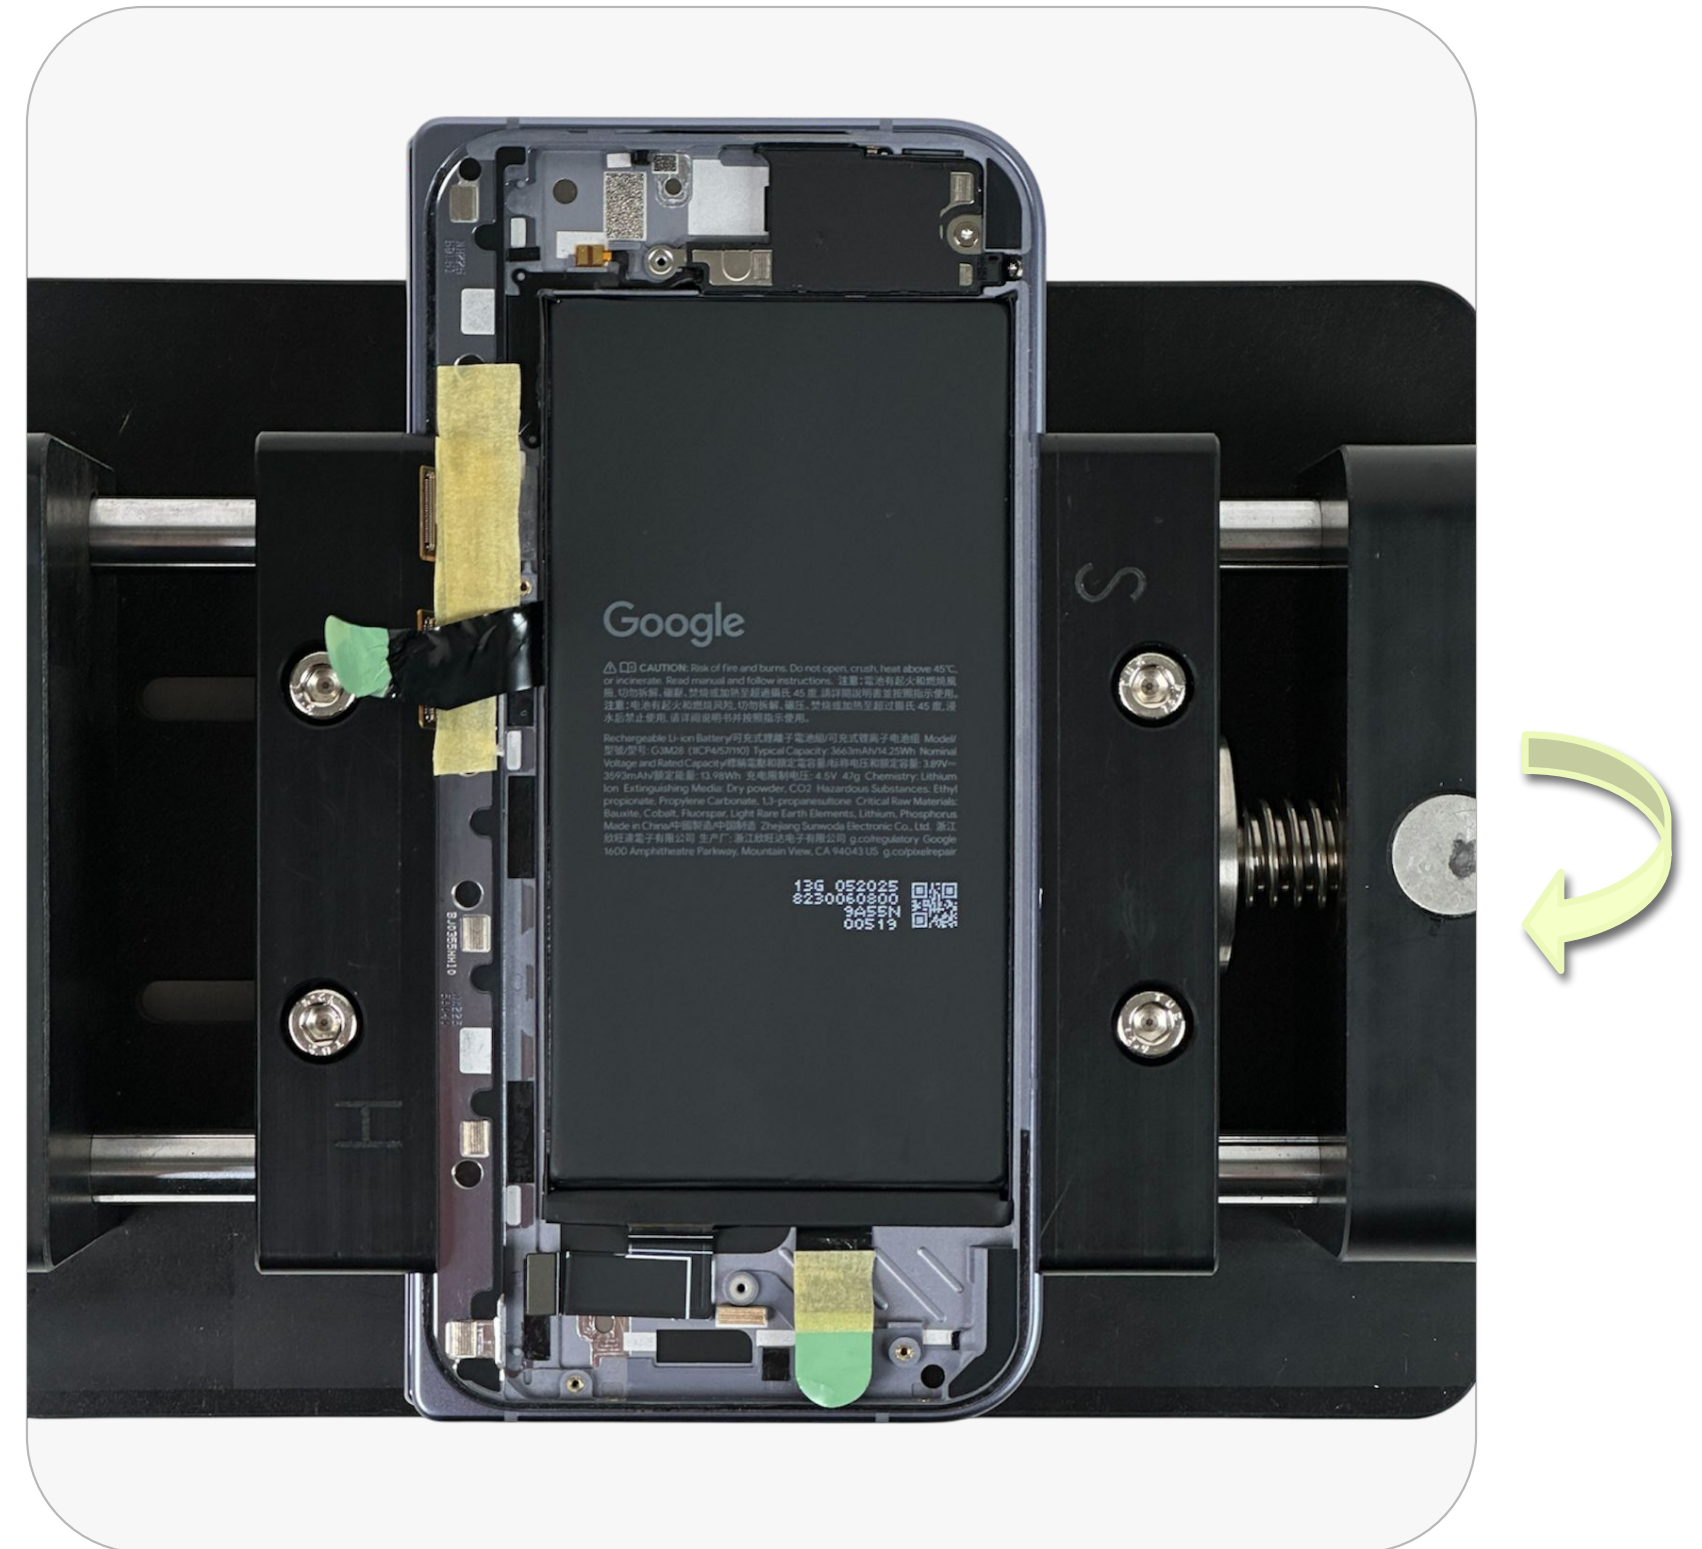

Secure the device

- Secure the fixture on the working surface.
- Fold the device, and secure it on the fixture.

Use caution

The heat plate is a hot surface, so caution to avoid burns.

Outer Display

Lower Board

Upper Board

Outer Front Camera

Flip Battery

Inner Display Sub

Adjust the pull jacket

Pull the **pull jacket** back and forth to move the left end toward the bottom of the **flip battery**.

Use caution

Avoid use of sharp objects or tools to prevent damage to the **battery**.

Note

The back-and-forth motion cuts through the adhesive under the flip battery.

It might require some strength. Wear finger cots to increase friction.

Finished! Want assembly instructions? →

Remove the battery

- Pull the jacket to lift the lower right corner of battery in **Fig 1**, and rotate the jacket to the right side of battery at the same time in **Fig 2**. Reheat the device 3 minutes, if it feels cooled down.
- Pull the **pull jacket** back and forth upward to cut through the top-right adhesive under the **flip battery**.
- Gently remove the **flip battery** and store it safely.

Part: multiple part numbers (flip battery)

Use caution

Lift the battery as soon as the device leaves the heat plate before the adhesive cures.

keep small screws and sharp objects away from the battery.

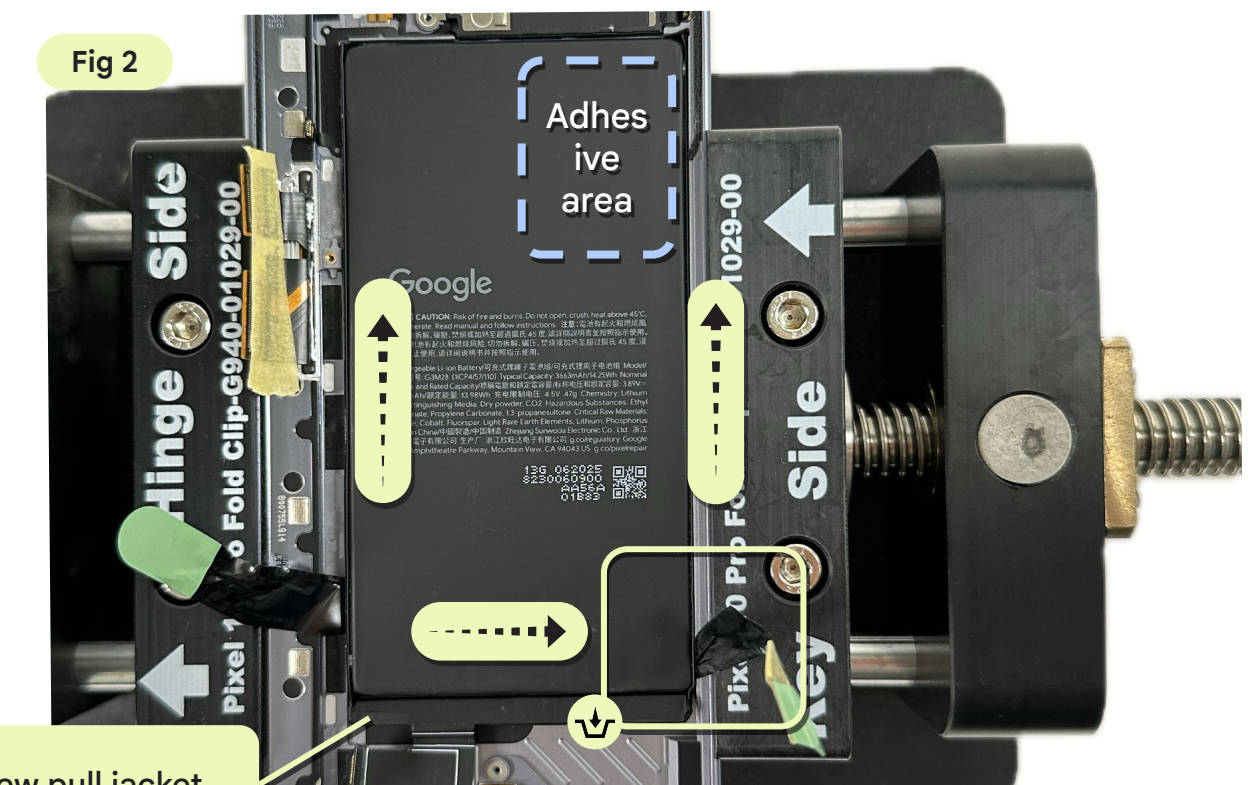

Don't reuse the part.

Note

Wear finger cots to increase friction.

If the pull jacket breaks, **insert a new one (G806-14434-00)** through the opening at the lower side of the battery and reheat the device 3 minutes, if it feels cooled down.

Entry point for new pull jacket.

ID (inner display) sub Flip side

If you reuse the inner display sub (flip side), ensure that any adhesive residue is completely removed.

Use caution

Review all safety precautions before you begin work.

Part: G806-13626-01 (ANT 1 PSA 2)

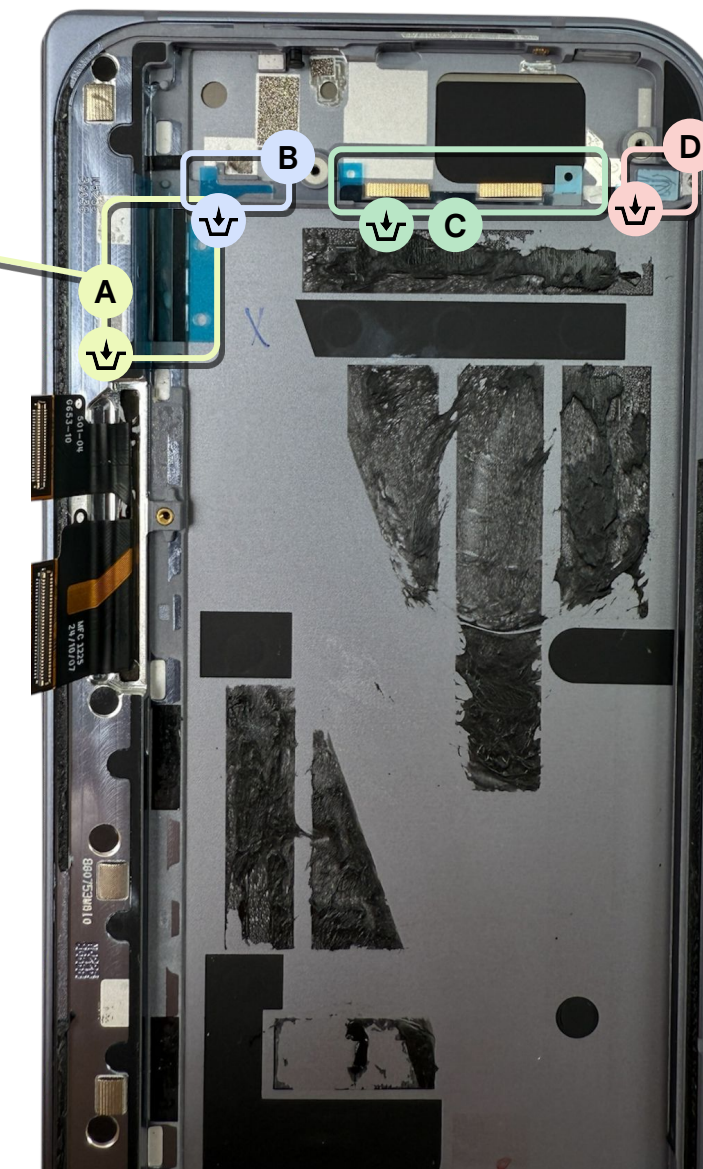

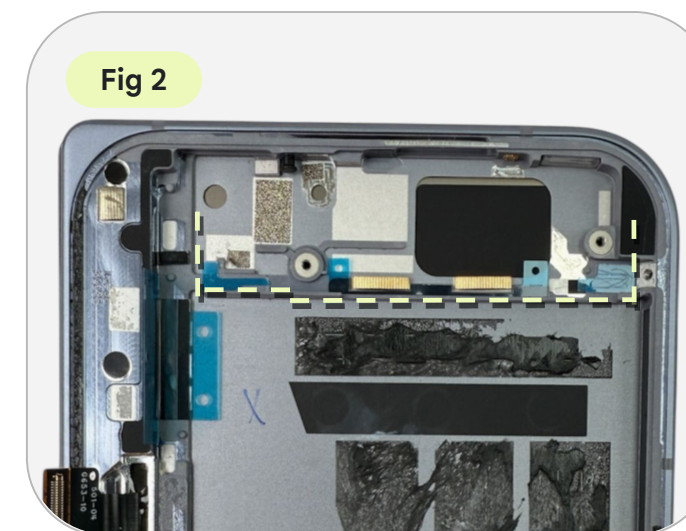

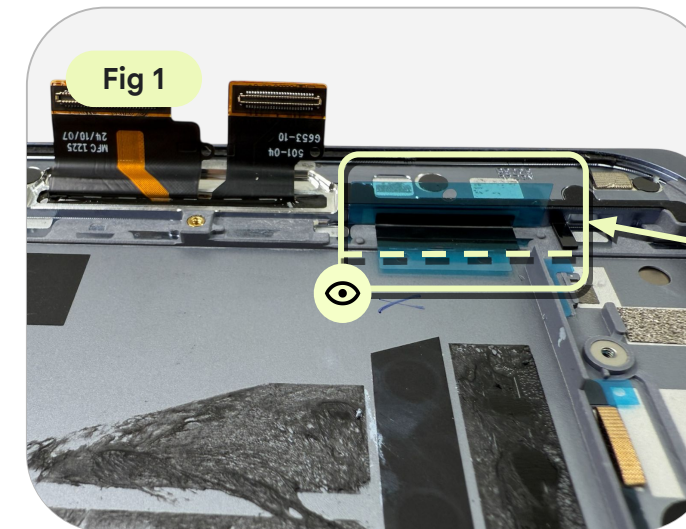

Part: G806-13627-01 (ANT 1 PSA 3)

Note

The inner display sub includes the ANT 1 FPC.

Perform this step only if the ANT 1 FPC is damaged.

A: G806-13628-01

B: G806-13627-01

C: G806-13626-01

D: G806-13625-01

Inner Display Sub

Outer Front Camera

Upper Board

Lower Board

Flip Battery

Outer Display

Install the ANT 1 FPC

- Attach the **ANT 1 FPC** to the **inner display sub**, follow the sequence to assemble. Fold the middle part along the retaining wall to the bottom.
- Press down for **5 seconds**.

Part: G949-01545-00 (ANT1 FPC)

Note

The inner display sub includes the ANT 1 FPC.

Perform this step only if the ANT 1 FPC is damaged.

Make sure that the flex fits around the three positioning posts, as shown in **Fig 1** and **Fig 2**.

Attach the ANT 1 FPC

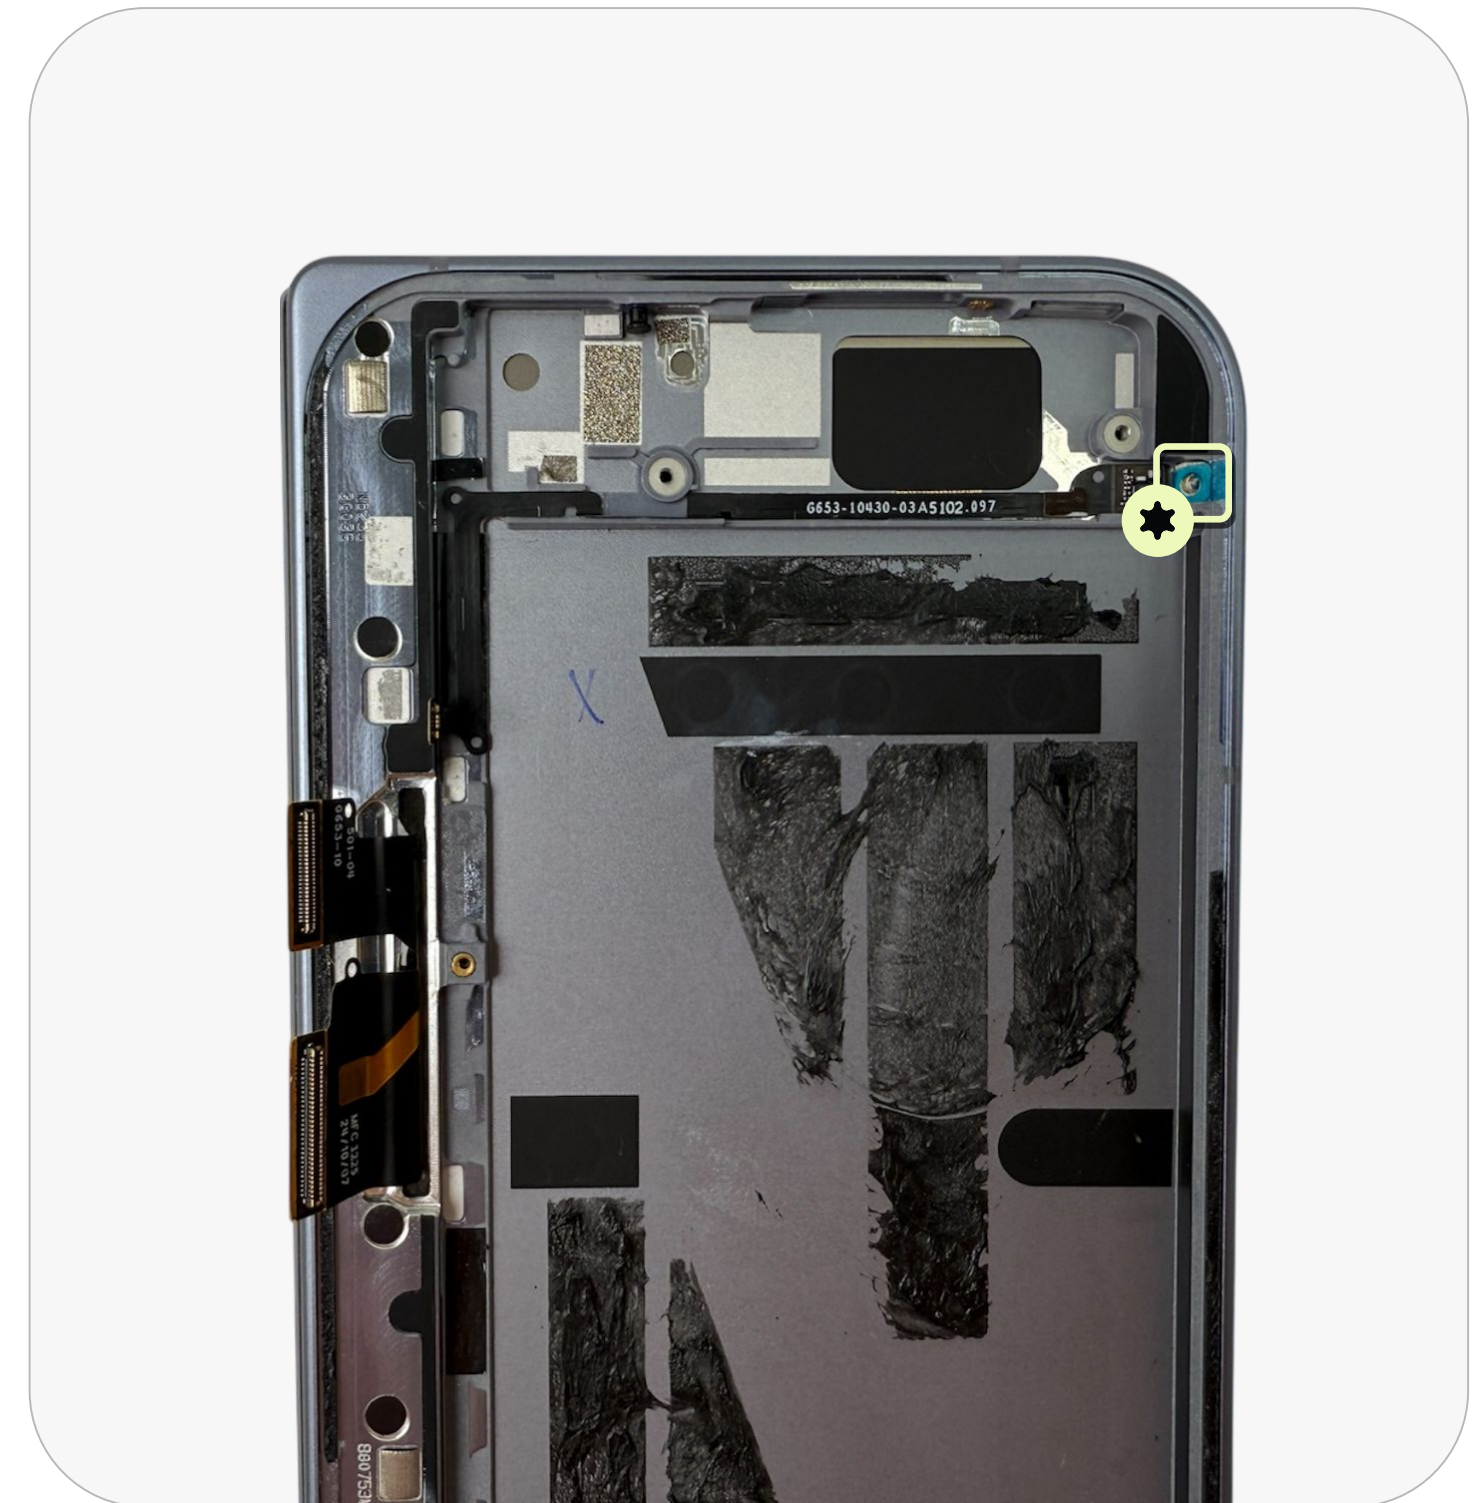

- Tear off the liner and apply the ANT 1 bracket to the positioning hole.
- Tighten the **screw** with a torx plus 3IP screwdriver.
- Tighten the screw a second time for a secure fit.

Part: G730-09634-01 (ANT 1 bracket)

Part: G250-06986-00 (screw)

Note

The inner display sub includes the ANT 1 FPC. Perform this step only if the ANT 1 FPC is damaged.

Reuse the top speaker

- Remove residual adhesive with an ESD spudger, as shown in **Fig 1**.
- Clean the surface with a dust-free cloth dampened with IPA.
- Apply the **top speaker CPSA** and **contact pad PSA** according to the outline, as shown in **Fig 2**.
- Tear off the liners.

Part: G806-14305-00 (TSPK CPSA)

Part: G806-14307-01 (pad PSA)

Note

The inner display sub includes the top speaker with ANT 4 FPC.

Perform this step only if the top speaker is damaged.

Fig 1

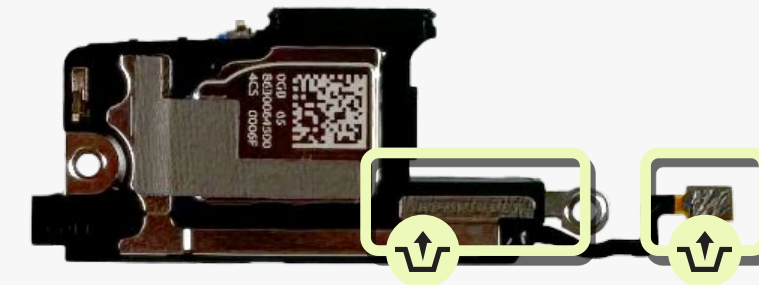

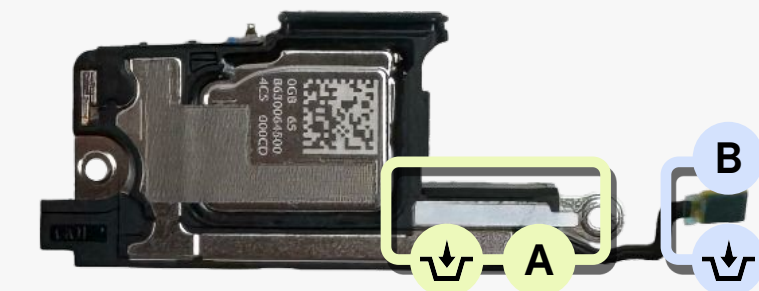

Fig 2

A:G806-14305-00

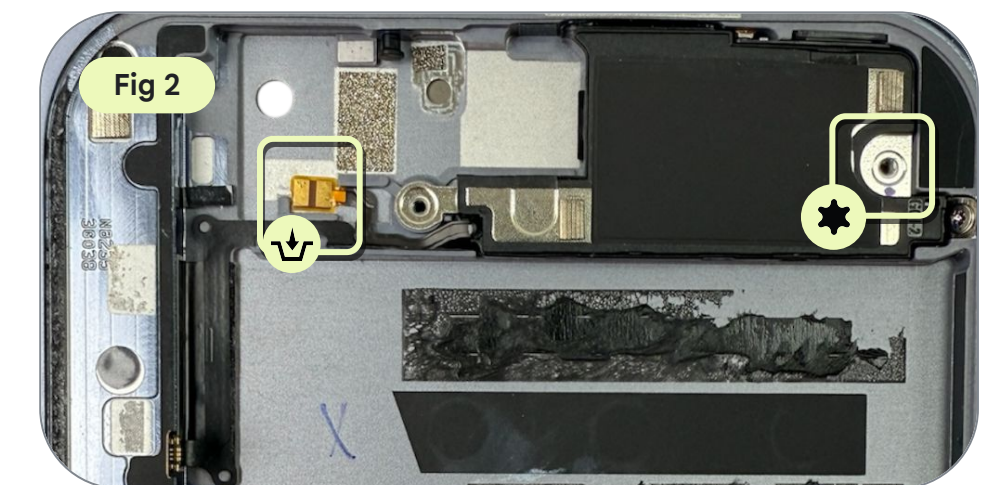

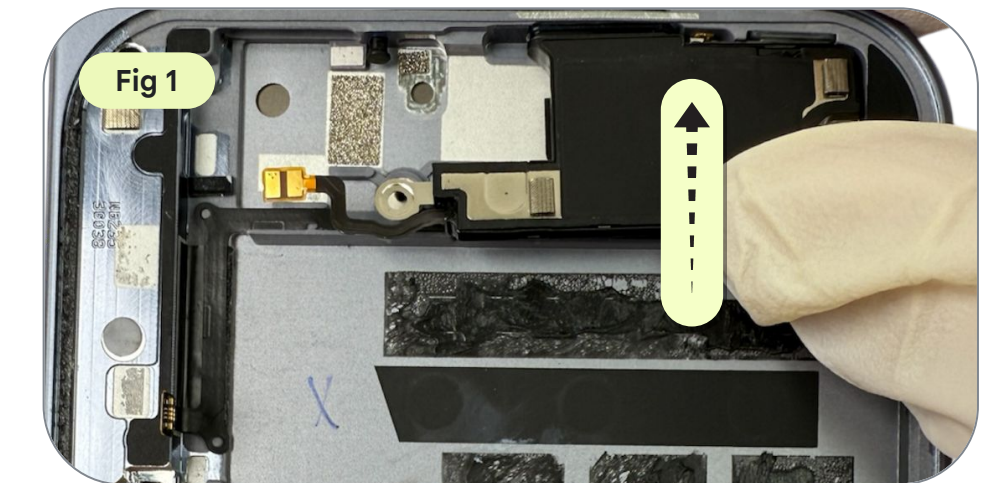

B: G806-14307-01

Attach the top speaker

- Install the **top speaker** to the **enclosure** and press it to make sure that it fits completely, as shown in **Fig 1**.
- Fix the pad according to the designated position, as shown in **Fig 2**. Tighten the **screw** with a torx plus 3IP screwdriver. Tighten the screw a second time for a secure fit.
- Tear off the blue liner if you use the new **top speaker**.

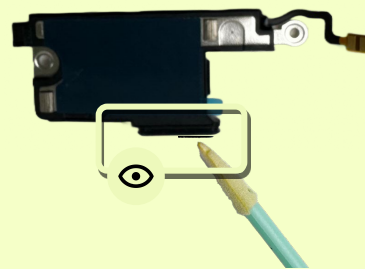

Part: G949-01544-00 (top speaker with ANT 4 FPC)

Part: G250-08003-10 (screw)

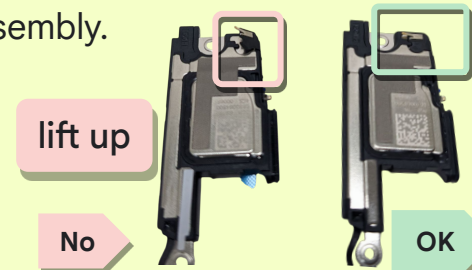

Note

Clean the rubber surface with dust-free cotton swabs before the installation.

Note

Press the ANT 4 FPC before the Top speaker assembly.

Replace the board PSA

Replace the **six lower board PSAs** and **one upper board PSA**.

Part: G806-13629-01 (lower PCB PSA-1) *2

Part: G806-13630-01 (lower PCB PSA-2)*2

Part: G806-13631-01 (lower PCB PSA-3)

Part: G806-14387-01 (lower PCB PSA-6)

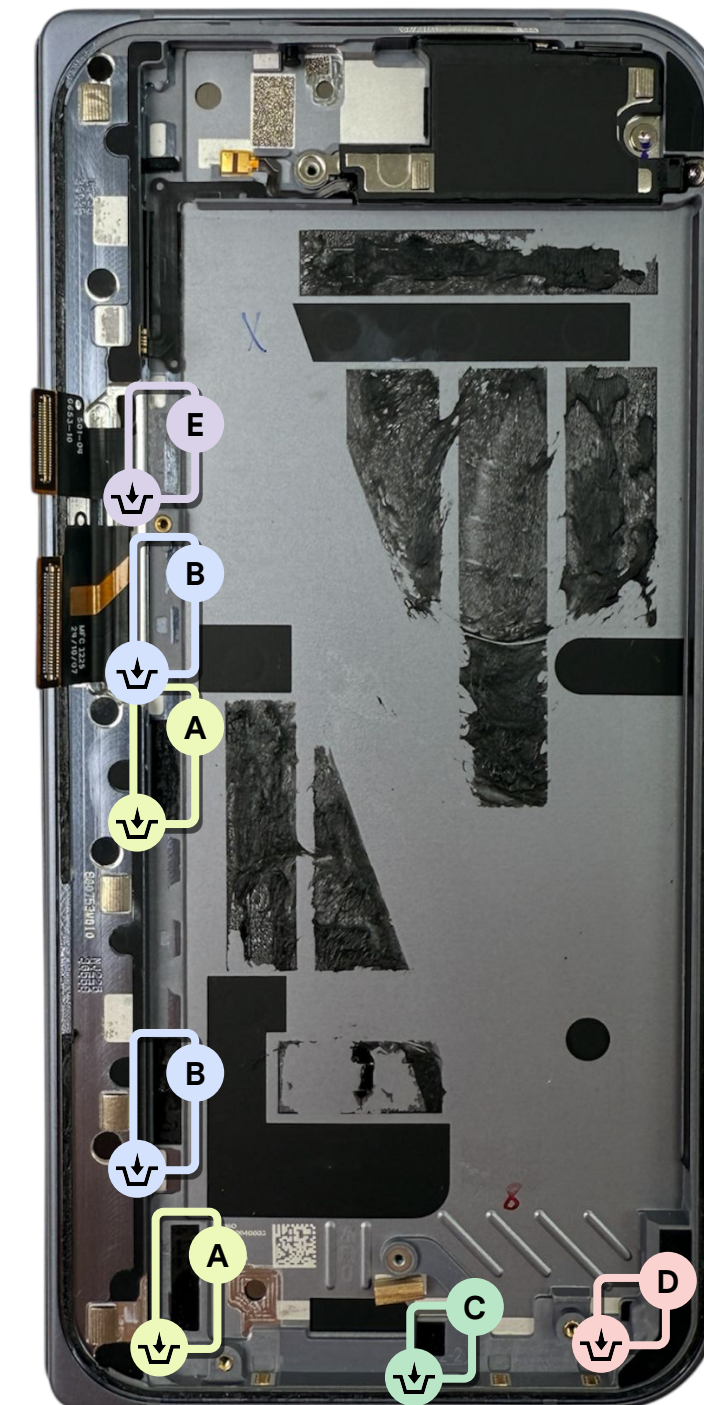

Part: G806-14959-00 (upper PCB PSA)

Note

The inner display sub includes the PSAs. Perform this step only if the OD sub is disassembled.

Don't remove the release liner just yet.

A: G806-13630-01

B: G806-13629-01

C: G806-13631-01

D: G806-14387-01

E: G806-14959-00

Reuse the ID sub or use new ID sub

- Use a **spudger** to remove remaining adhesive from the **enclosure** and **flip battery** area.
- Remove large chunks with fingers or **tweezers**. Clean with a **dust-free cloth** and **IPA**.
- Remove **masking tapes, liners** (no. 1 to 4) and the **wrap** on the **hinge** from the **flip enclosure** for the new ID sub.

⚠ Use caution

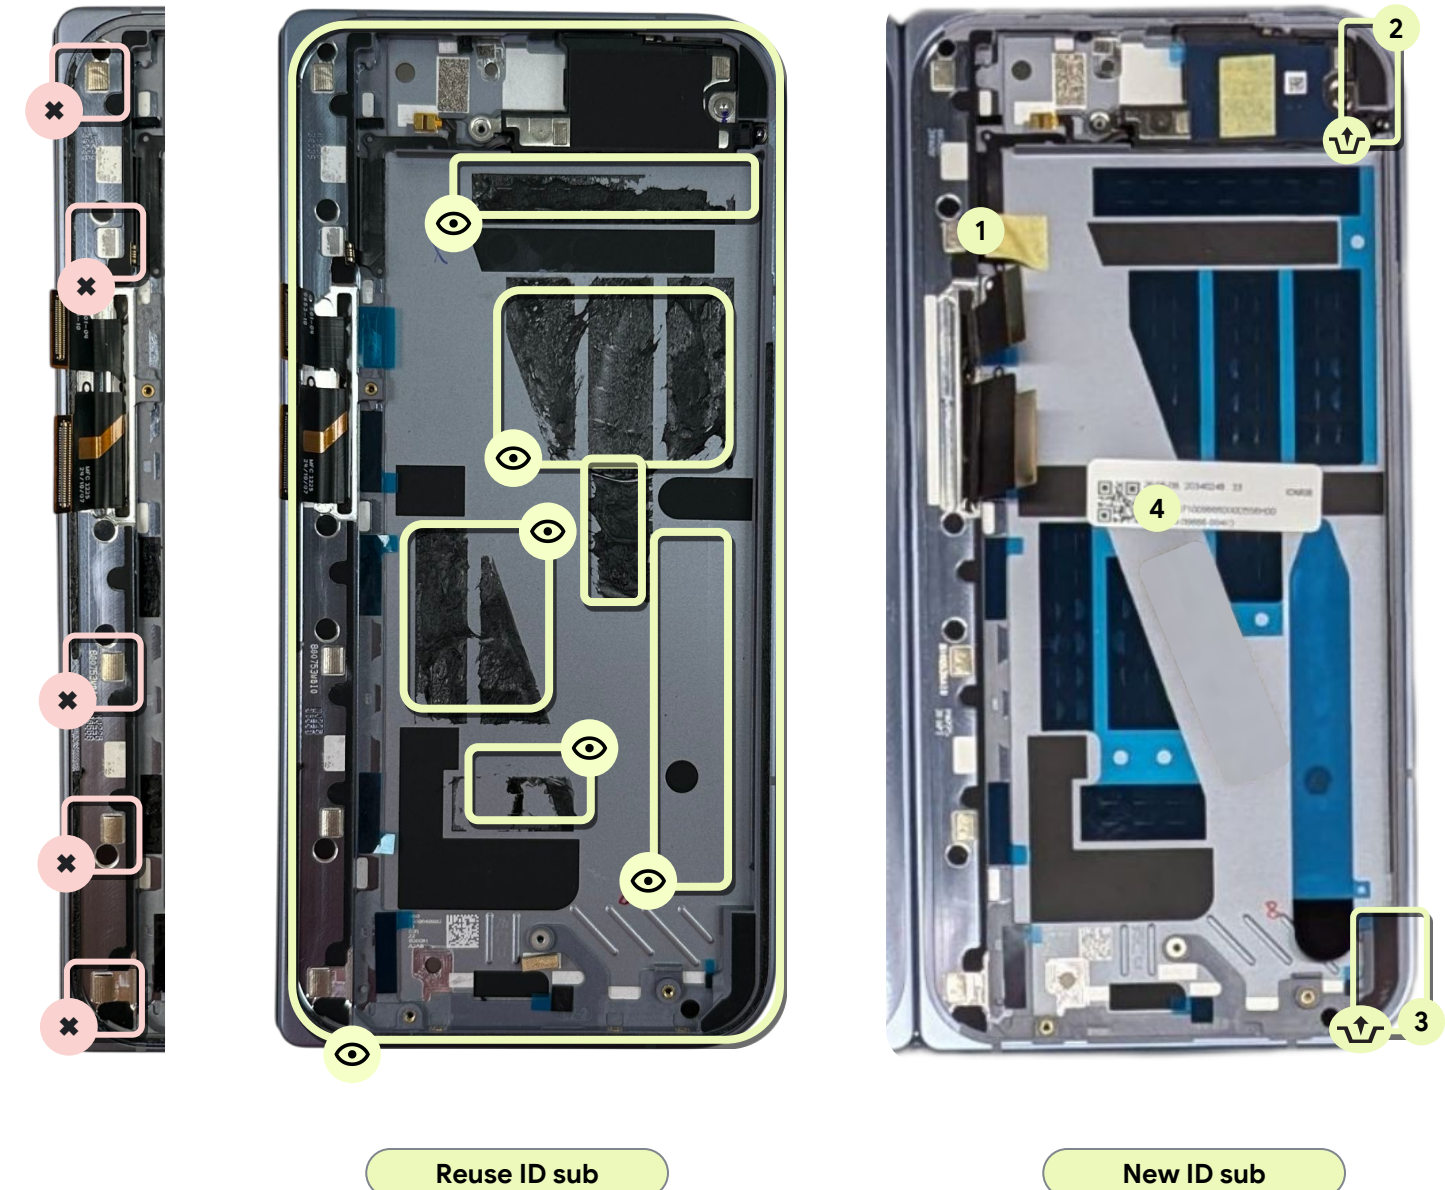

Be careful to avoid damage to the foam on the enclosure side during deglue the residual glue.

💡 Note

The inner display subassembly includes the flip battery PSA. Perform this step only when need to reusing the inner display subassembly.

💡 Note

The yellow highlight is where the residual adhesive exists.

Inner Display Sub

Outer Front Camera

Upper Board

Lower Board

Flip Battery

Outer Display

Place flip battery PSA

- Paste the **flip battery PSA** along the upper-right corner.
- Paste the pull tab along the retaining wall in the lower right, and make sure that the black dot is in the center.
- Run a spudger over the PSA to strengthen adherence.

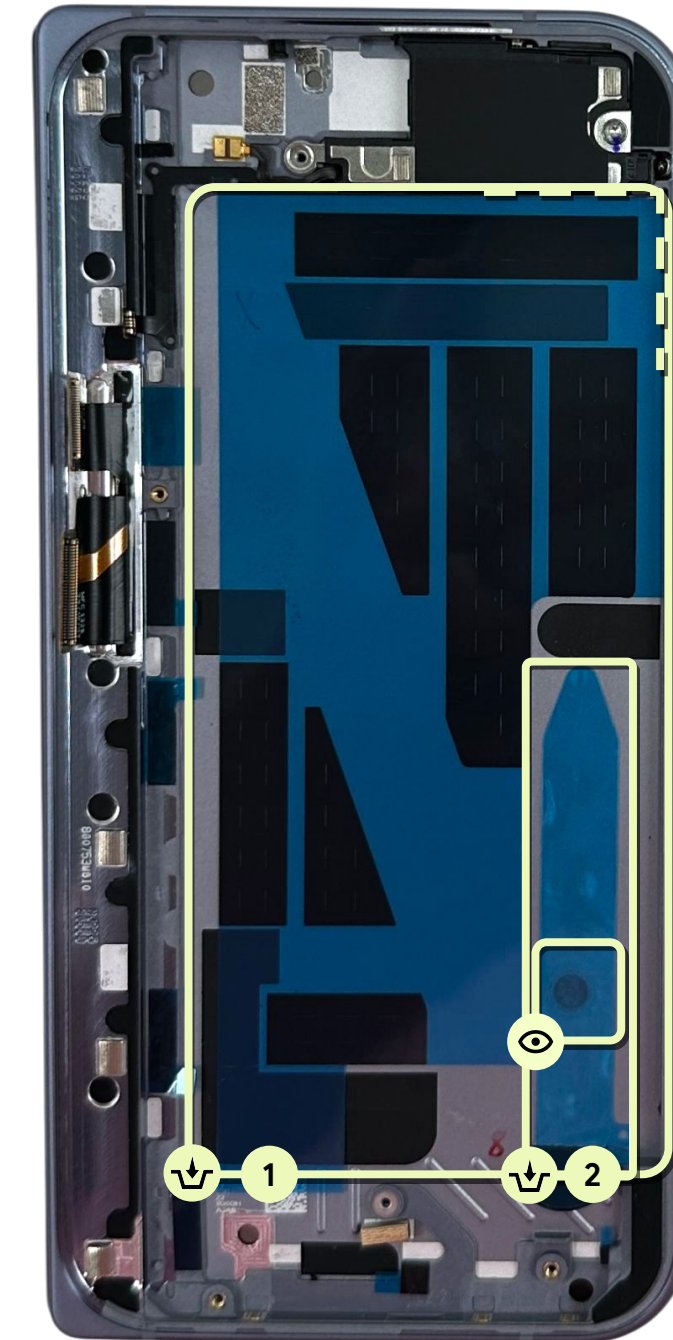

Part: G806-15380-01 (flip battery PSA)

Part: G806-17439-01 (flip battery bond PSA)

Note

Don't remove the release liner just yet.

Place Batt wall Kapton

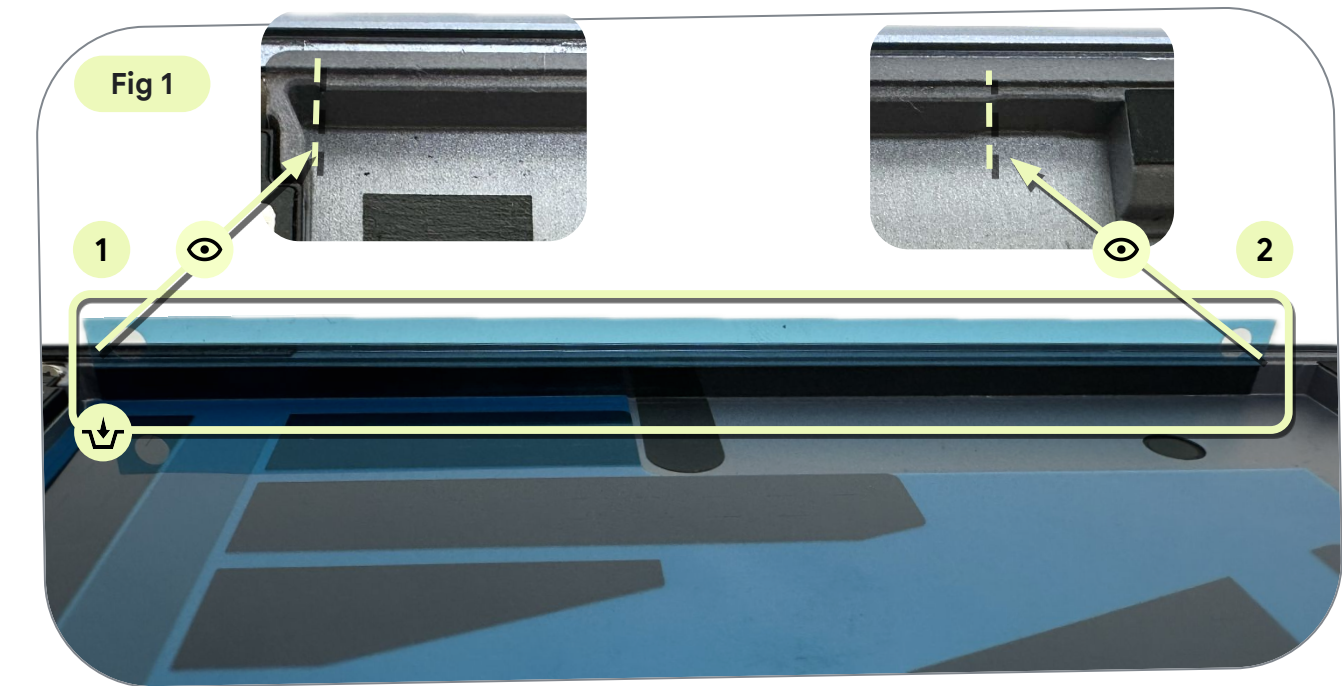

- Paste the **batt wall kapton** along to retaining wall from 1 to 2 with **ESD tweezers**, as shown in **Fig 1**. Do not exceed the slope.
- Run a spudger over the kapton to strengthen adherence.
- Remove the release liner.

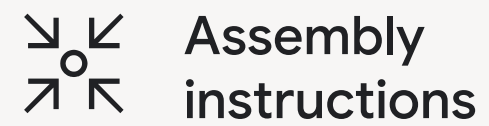

Part: G806-14390-01 (Batt wall Kapton)

Note

Skip this step if the kapton is not damaged or broken.

Outer front camera

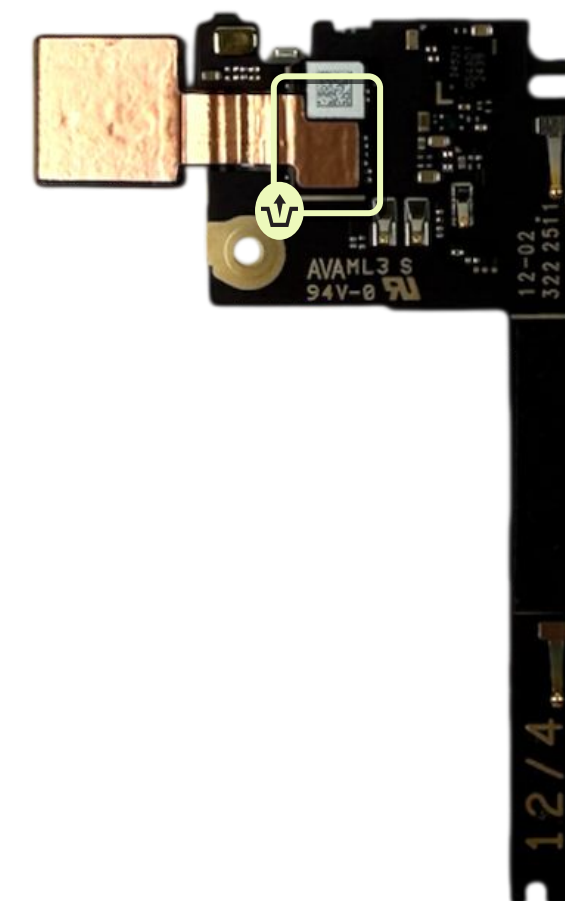

Attach the outer front camera

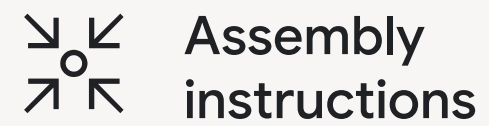

Latch the outer FCAM connector to the **upper board**.

Part: G949-01529-00 (outer front camera)

Note

Make sure that the connector is fully attached to the **upper board**.

Upper board

Place the upper board

- Tear off the blue liner, as shown in **Fig 1**.
- Push the **upper board** upward at an angle to install it onto the enclosure, as shown in **Fig 2**.

Part: G949-01535-00 (upper board)

Note

Install the upper board under the hook. Refer to the relative position.

Fig 1

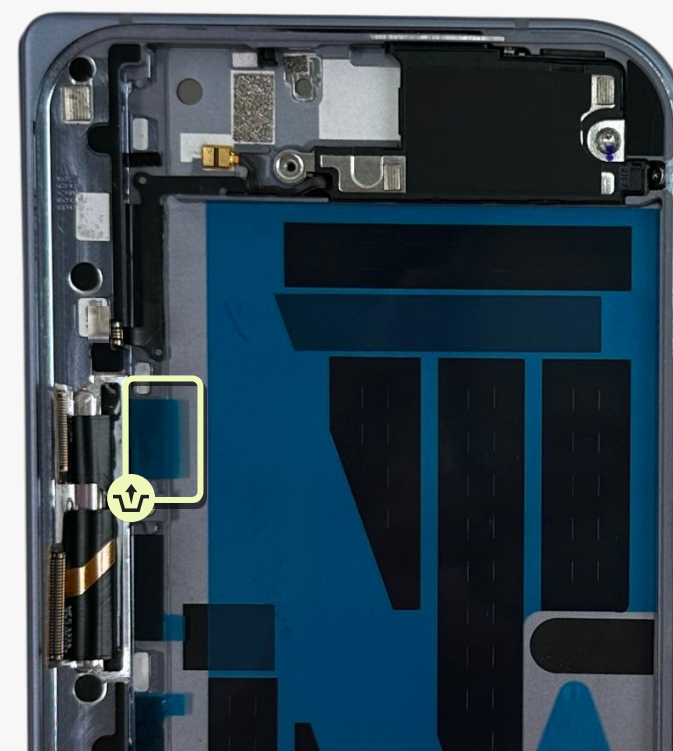

Fig 2

Install the SIM tray and upper board

- Insert the SIM tray into the slot.
- Fasten one upper board screw with a **torx plus 3IP screwdriver**, tightening twice.

Part: multiple part numbers (SIM tray)

Part: G250-08003-10 (screw)

Note

Wear a glove when handling the SIM tray; on the contrary, *don't* wear gloves when handling the upper board.

Note

Clean the rubber surface with dust-free cotton swabs before installation.

Apply the P-sensor rubber

Apply the P-sensor rubber to the upper board and check for misalignment.

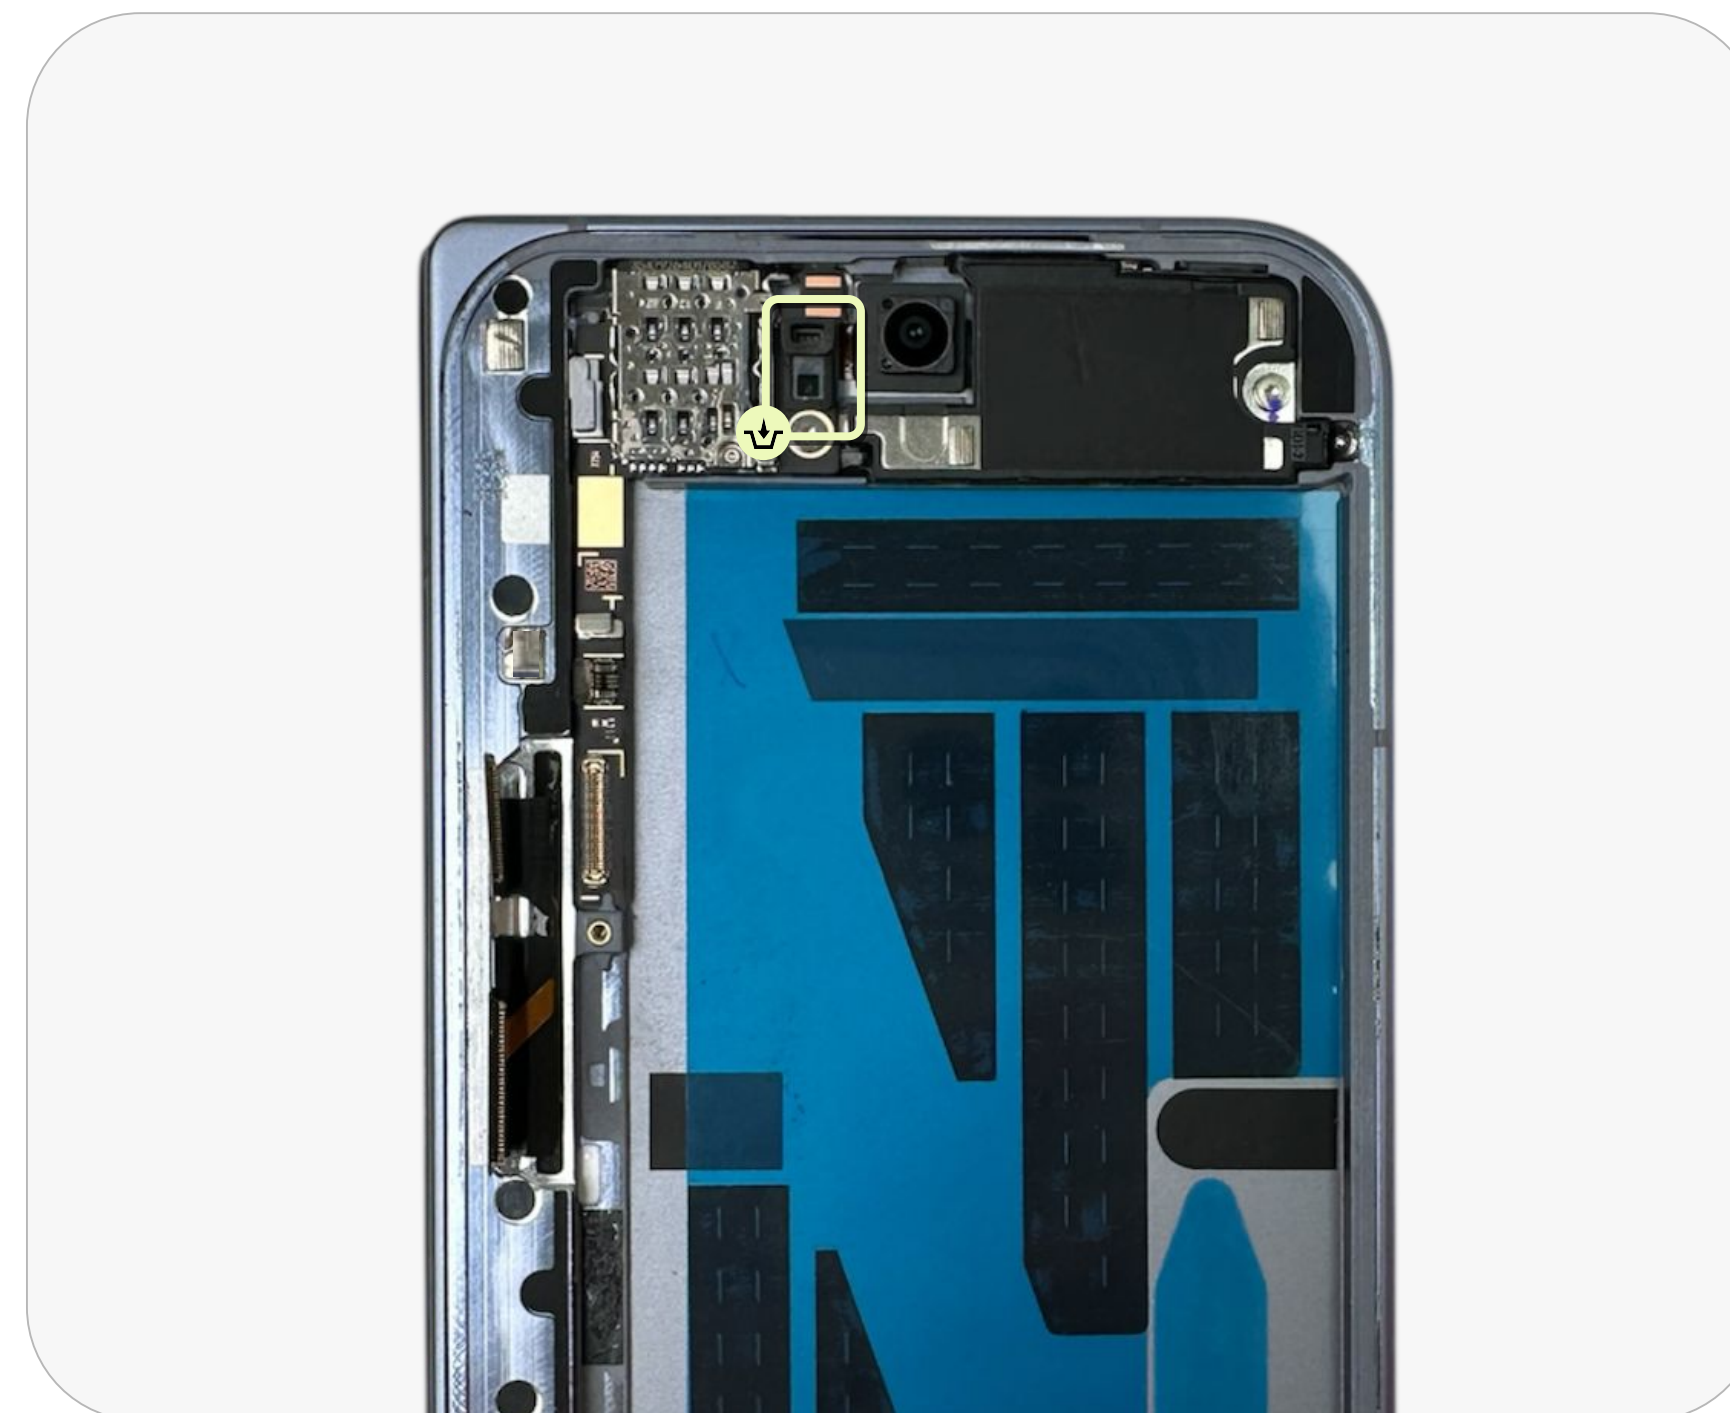

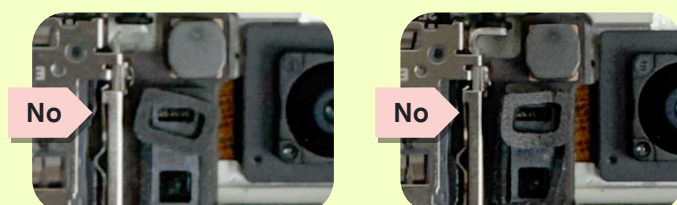

Part: G806-14452-01 (P-sensor rubber)

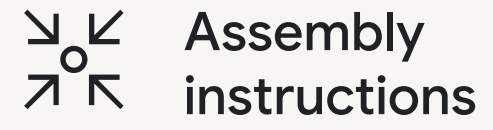

Note

Skip this step if the rubber is intact.

Make sure that the rubber is properly aligned.

Lower board

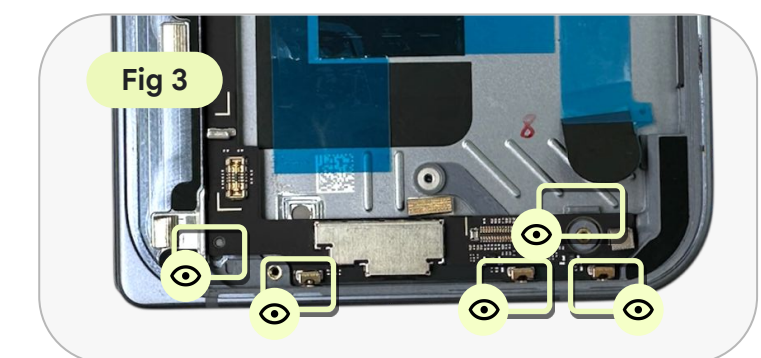

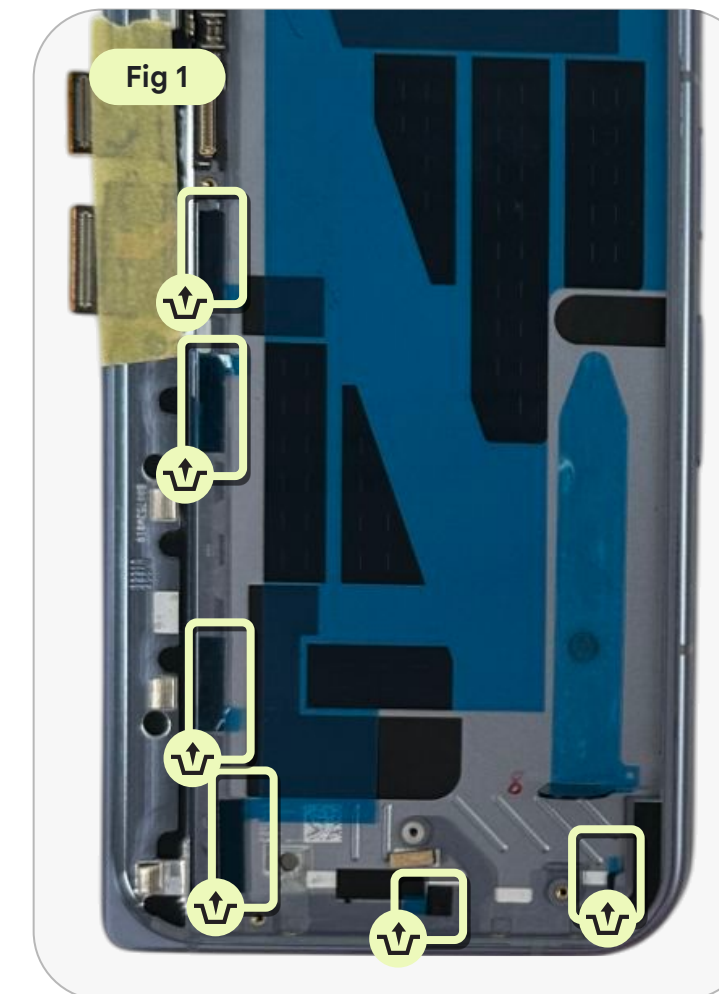

Place the lower board

- Remove the liners from the **six lower board PSAs**, as shown in **Fig 1**.
- Push the **lower board** downward at an angle to install it onto the enclosure, as shown in **Fig 2**.
- Make sure that the lower board sits against the alignment pins and the retaining wall, as shown in **Fig 3**.

Part: G949-01534-00 (lower board)

Note

Remove remaining adhesive from the lower board.

Apply the conductive tapes

Attach the **conductive tapes** to the indicated areas.

Part: G806-14472-00 (conductive tape)*2

Connect upper, lower and ANT 1 boards

Snap the **ANT 1**, flip top and bottom bridge FPC connectors.

Note

Check that three connectors are fully engage to the **lower board** and the **upper board**.

Reuse the flip bridge cowling

- Tear off the conductive tape. Use a **spudger** to remove residual adhesive from the **cowling**.
- If residue remains, clean the surface with a **dust-free cloth** and **IPA**.
- Apply a new **conductive tape** to the designated position, as shown in **Fig 2**.

Part: G730-09662-00 (flip bridge cowling)

Part: G806-14461-00 (conductive tape)

Note

The flip bridge cowling comes with the conductive tape. Perform this step only when you reuse the part.

Fig 1

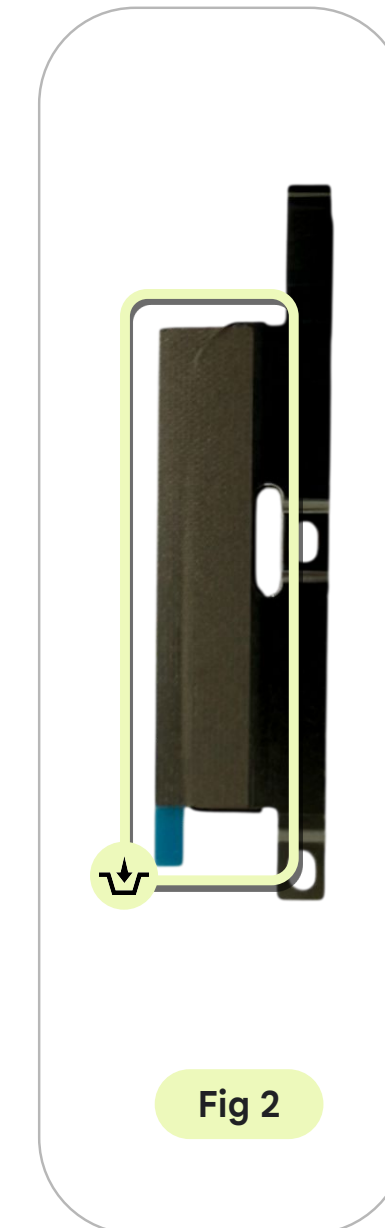

Fig 2

Install the flip bridge cawling and rubbers

- Insert the bridge of the **flip bridge cawling** into the enclosure groove, as shown in **Fig 1**.
- Fasten the two **flip bridge cawling screws** with a **torx plus 3IP screwdriver**, as shown in **Fig 2**.
- Tear off the blue liner of conductive tape and paste on the enclosure.
- Attach the **two rubber strips** onto the **upper and lower boards**, as shown in **Fig 3**.

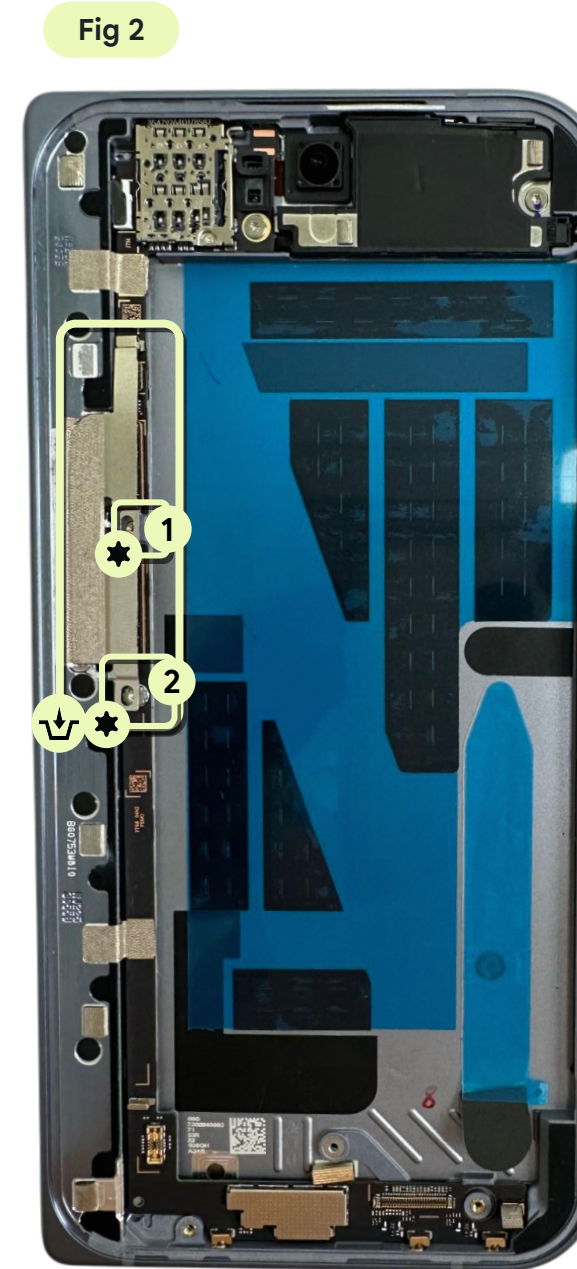

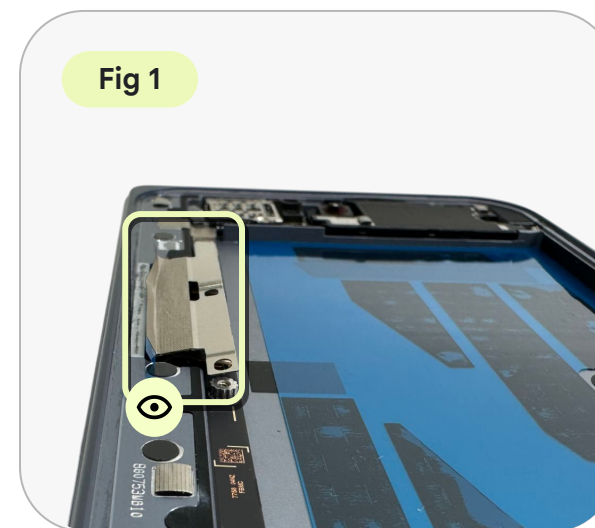

Part: G730-09662-00 (flip bridge cawling)

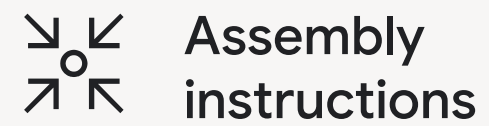

Part: G250-08002-10 (screw*2)

Part: G806-14461-00 (conductive tape)

Part: G806-15617-00 (upper rubber)

Part: G806-15616-00 (bottom rubber)

Assembly
instructions

Flip battery

Remove the liners

- Remove any debris or loose screws from the **enclosure** before the procedure.
- Apply pressure on the **adhesive** strips with a **spudger** or fingers for proper adhesion.
- Remove the blue **liners** and **masking tapes** if you use a new ID sub.
- Remove the blue liner.

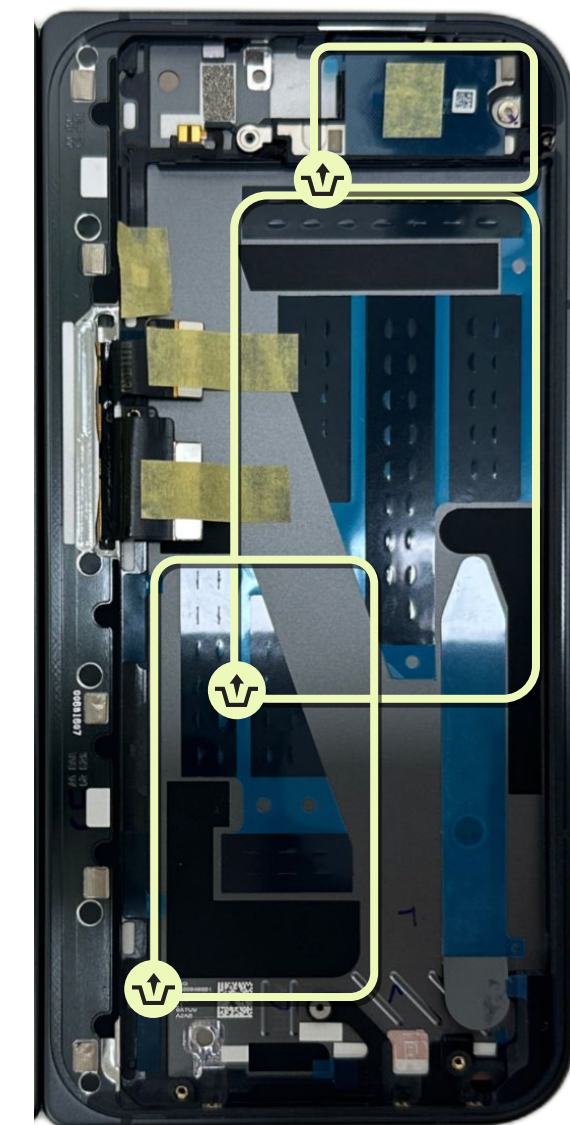

Use caution

Review all safety precautions before you begin work.

Make sure that the battery cosmetic checks are completed.

Reuse ID sub

New ID sub

Apply pull jacket

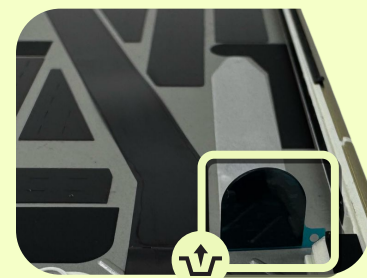

- Attach the **pull jacket** so that it aligns with the **pull tab** and the left edge of the enclosure. Ensure that it attaches vertically next to the SIM slot.
- Remove the blue **liners** of the **pull jacket** and **pull tab**.

Part: G806-14434-00 (pull jacket)

Note

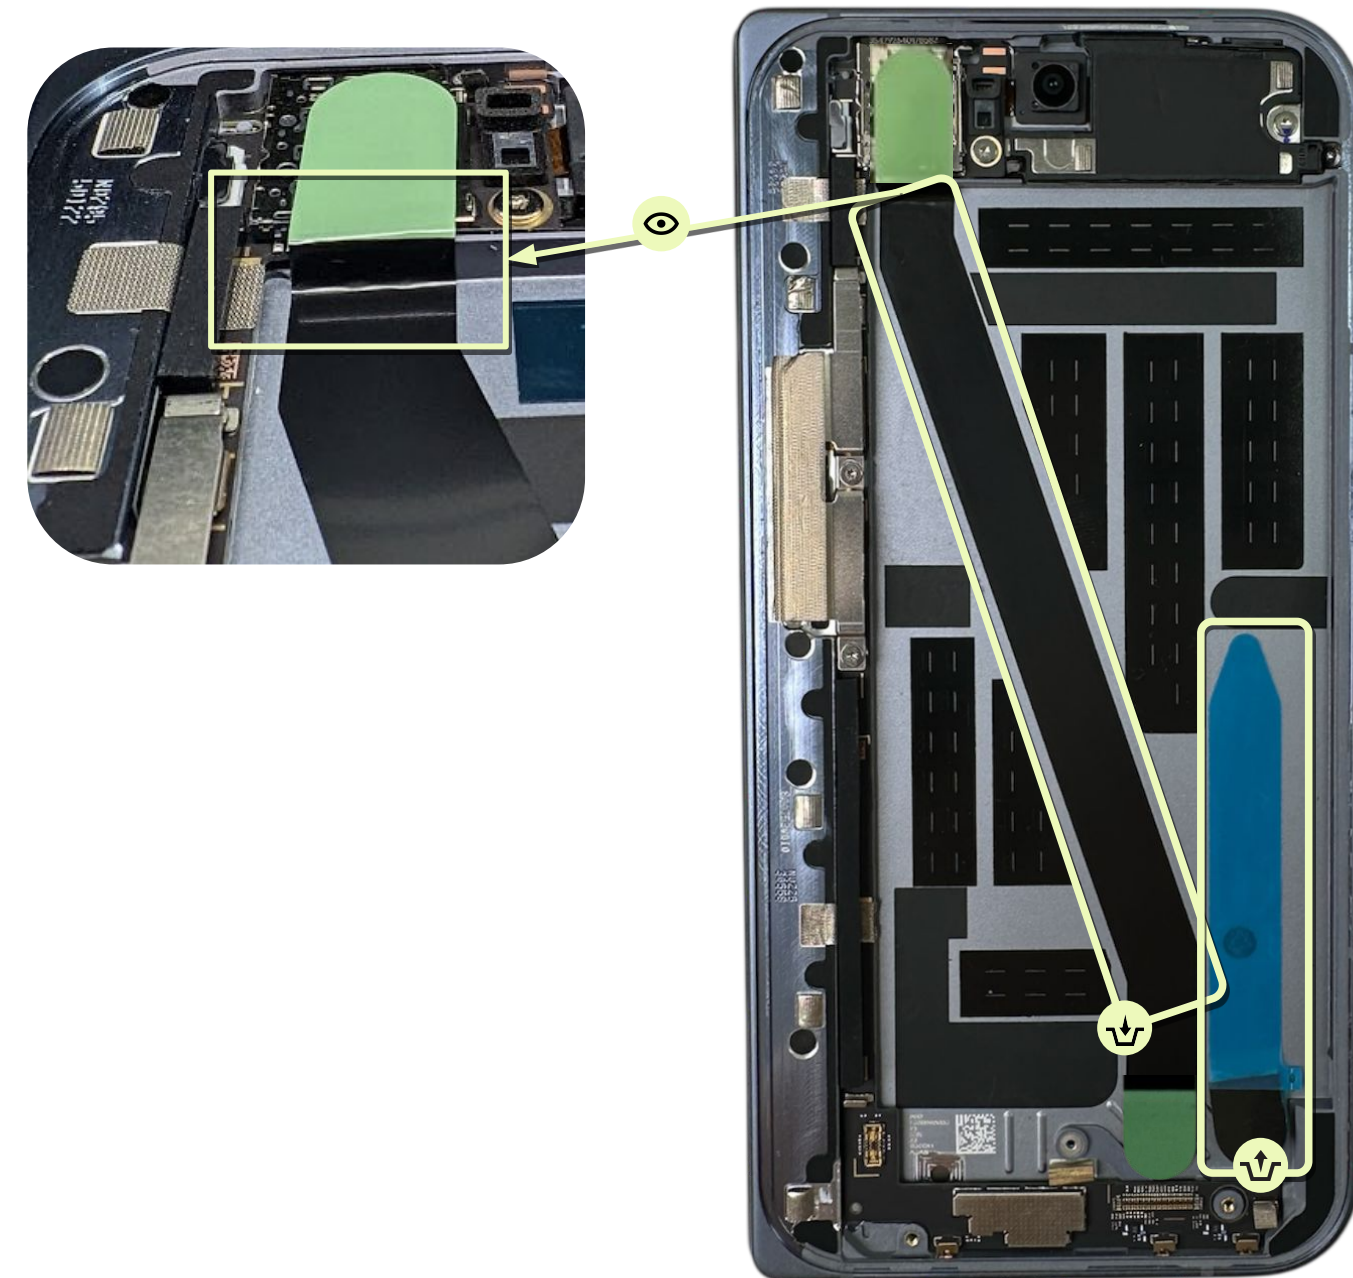

Peel off the liner from the opposite side of the removal tab.

Use caution

Review all safety precautions before you begin work.

Make sure that the battery cosmetic checks are completed.

Apply the AP111 primer

Evenly apply the primer across the flip battery's entire back surface.

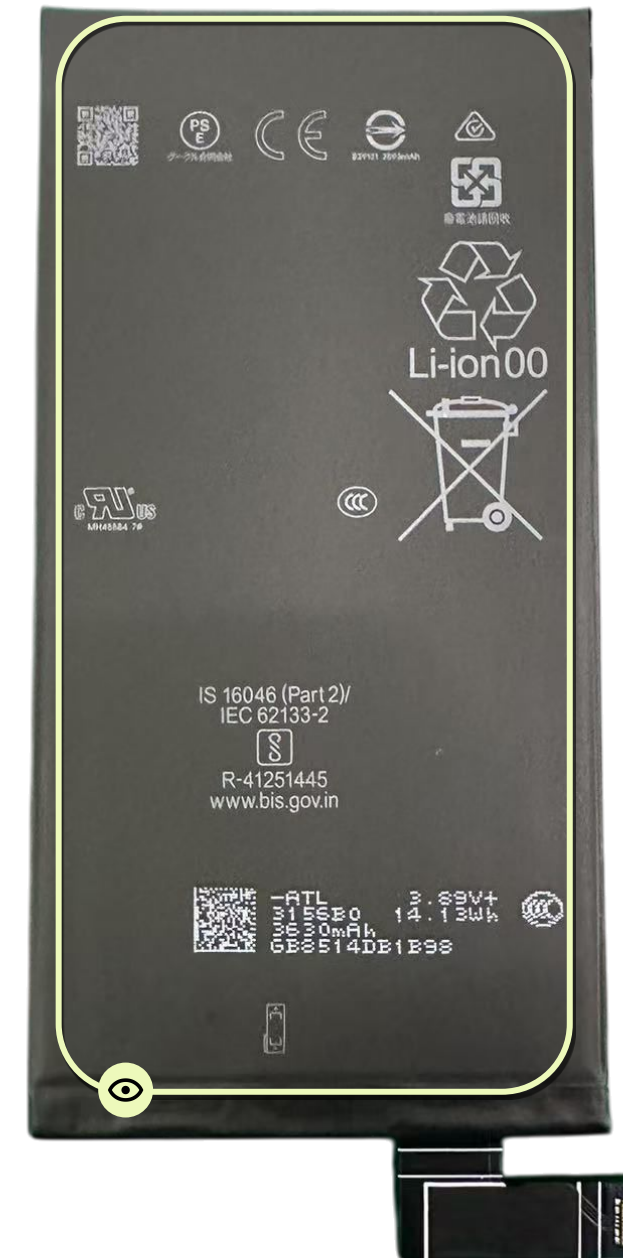

Part: multiple part numbers (flip battery)

Use caution

Review all safety precautions before you begin work.

Make sure that the battery cosmetic checks are completed.

Position the flip battery

- Confirm the battery model to be **G3M28**, as shown in **Fig 1**. If the model number isn't **G3M28**, please *don't* use the battery.
- Use an **adsorption bulb** to pick up the battery.
- Align it to the upper-right corner of the depression and push it to the upper side and right side as much as possible.
- Remove the adsorption bulb and the **white liner** carefully.

Note

The white liner ensures that the battery is in the correct position.

Don't remove it prior to install.

Use caution

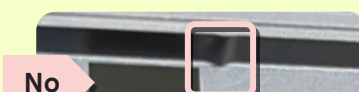

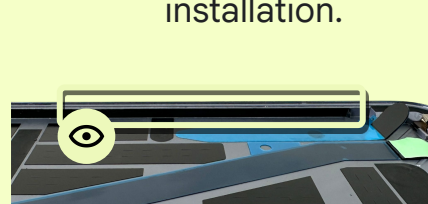

Review all safety precautions before you begin work.

Make sure that the battery cosmetic checks are completed.

Note

Check the mylar of the enclosure, and lift and press it with dust-free cotton swabs before the battery installation.

Outer Display

Press the flip battery

- Place the **universal supporting rubber #2** on the **universal holder #2**, and place the **universal holder limiting block #2** on top.
- Place the **fixture** in position **B2** on the **universal base**.
- Place the **Pixel 10 Pro Fold flip battery press rubber** on top of the **universal holder #2**, as shown in **Fig 1**.
- Place the **universal press plate 12 mm** on the **Pixel 10 Pro Fold flip battery press rubber**, as shown in **Fig 2**.
- Place it in the **universal press fixture**. Press the handle down for **25 seconds**, as shown in **Fig 3**.

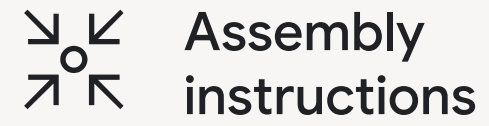

Use caution

Keep hands clear during operation.

Note

Make sure that all protective films are removed before you press.

OD (outer display) sub

Solution 1: reuse the outer display

Solution 1: reuse the outer display

Reuse the OD

- Use a spudger to remove remaining glue from the OD. Remove large adhesive chunks with your fingers or tweezers.
- Repeat for any adhesive residue.
- If any remains, clean the surface with a dust-free cloth and IPA.

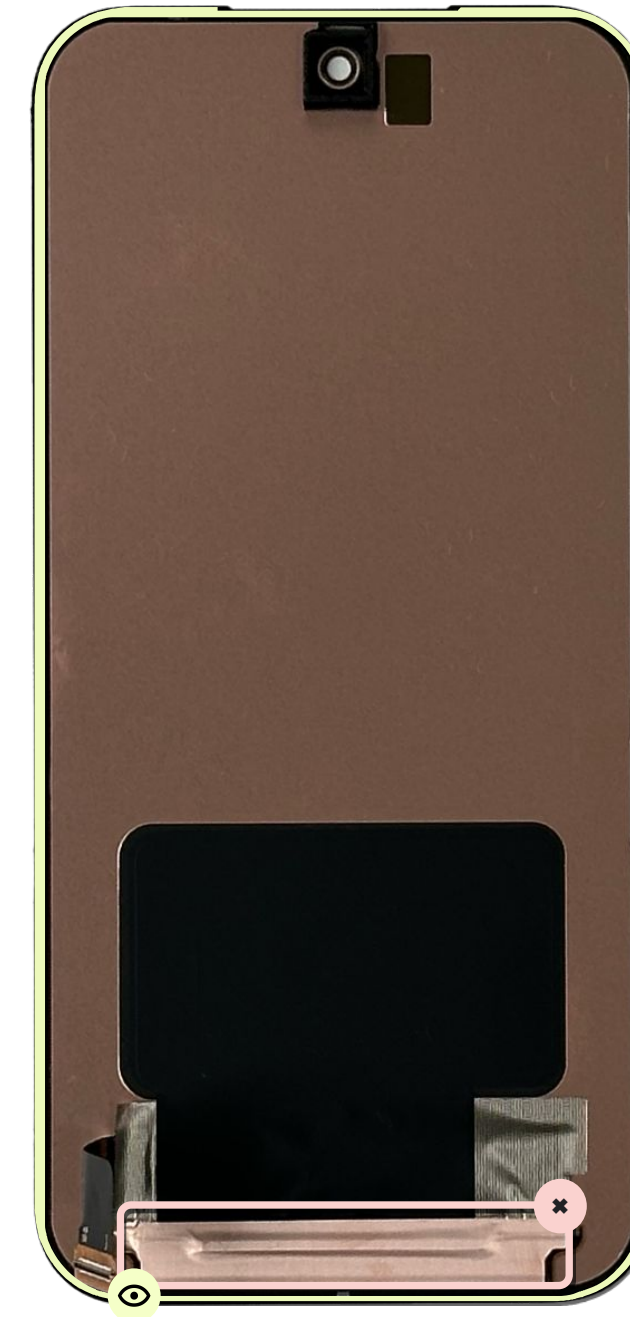

Note

The yellow highlight indicates areas with residual adhesive.

Use caution

Don't use the deglue machine on the driver IC area.

Solution 1: reuse the outer display

Apply the 3M AP111 primer

- Apply the **IPA** around the edges of the **enclosure** with **dust-free cotton swabs**.
- Apply the **3M AP111 primer** around the edges of the **enclosure** with **dust-free cotton swabs**.

Use caution

After the **primer** is applied, complete the assembly in 25 minutes.

Upper Board

Lower Board

Flip Battery

Outer Display

Solution 1: reuse the outer display

Align the OD PSA

- Slowly remove the larger liner from the **adhesive sheet** to expose the adhesive.
- Place the sheet over your phone, and align it with the device's top.
- Use your hand to apply the **adhesive** onto the enclosure top side.

Part: G806-14480-00 (OD PSA)

Use caution

Don't touch the adhesive.

If it gets dirty, replace it.

Solution 1: reuse the outer display

Activate the adhesive

- Make sure that the **adhesive** fully adheres to the **enclosure**.
- Activate it with a **spudger**.

Note

Inspect for any misalignment.

Solution 1: reuse the outer display ✖

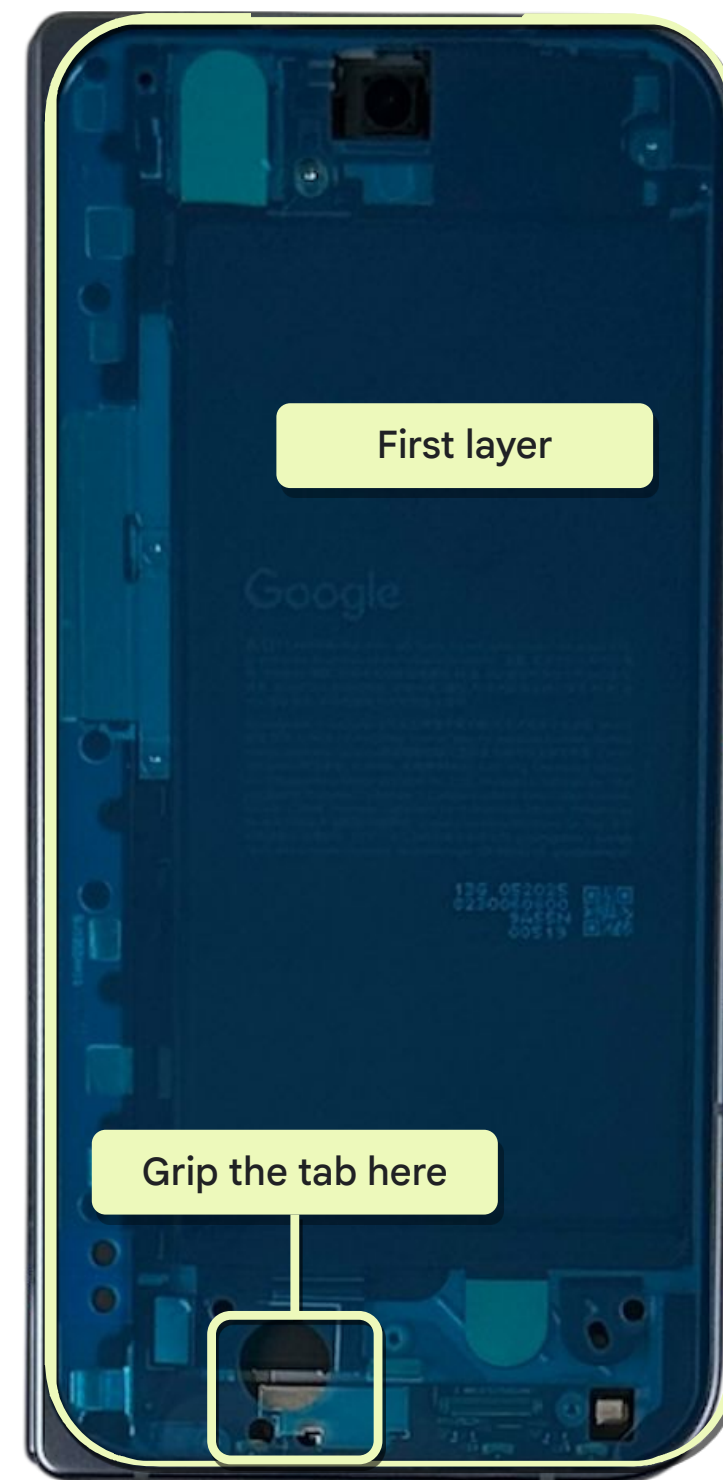

Remove the liner (first layer)

Carefully pull the tab to remove the **liner**, and avoid lifting the **adhesive**.

Use caution

Don't remove the second layer of the liner yet.

Solution 1: reuse the outer display

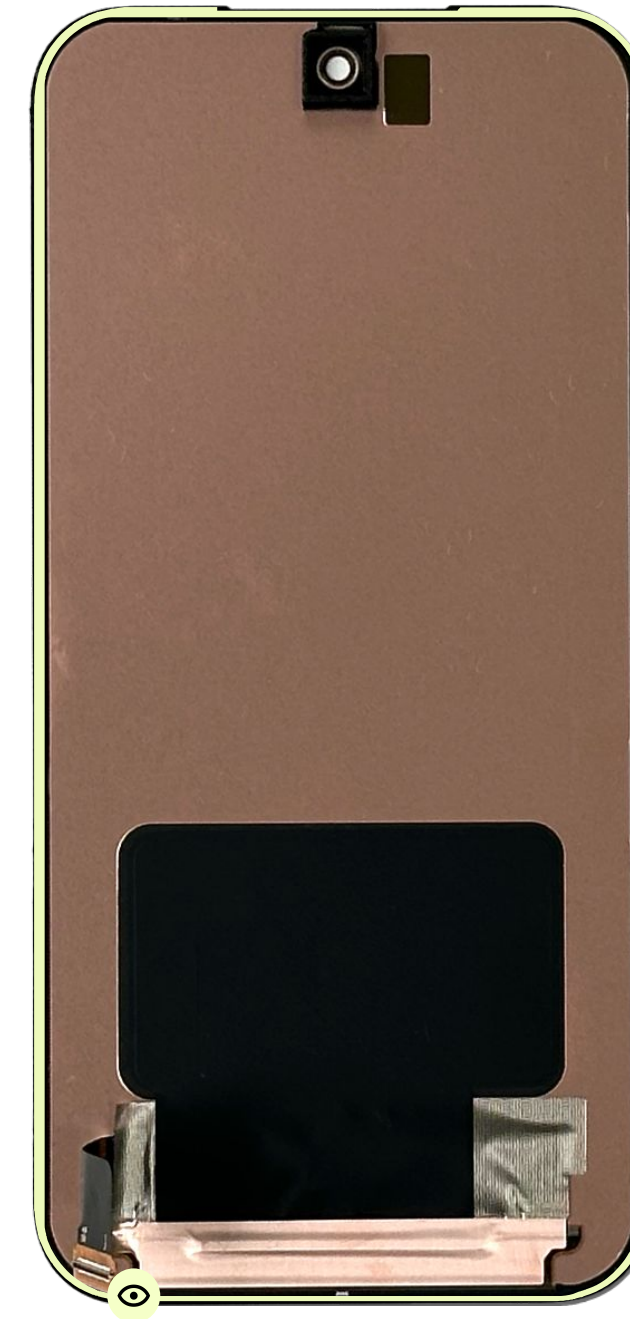

Apply the 3M AP111 primer on the OD

- Apply the **IPA** around the edges of the **OD** with **dust-free cotton swabs**.
- Apply the **3M AP111 primer** around the edges of the **OD** with **dust-free cotton swabs**.

Use caution

After the **primer** is applied, complete the assembly in 25 minutes.

Solution 1: reuse the outer display

Connect the OD sub

- Use an **adsorption bulb** to prop up the **OD**.
- Apply even pressure across the connector to connect the **OD** to the **lower board** and ensure a full engagement.
- Apply even pressure across the connector to connect the **flip battery** to the **lower board** and ensure a full engagement.

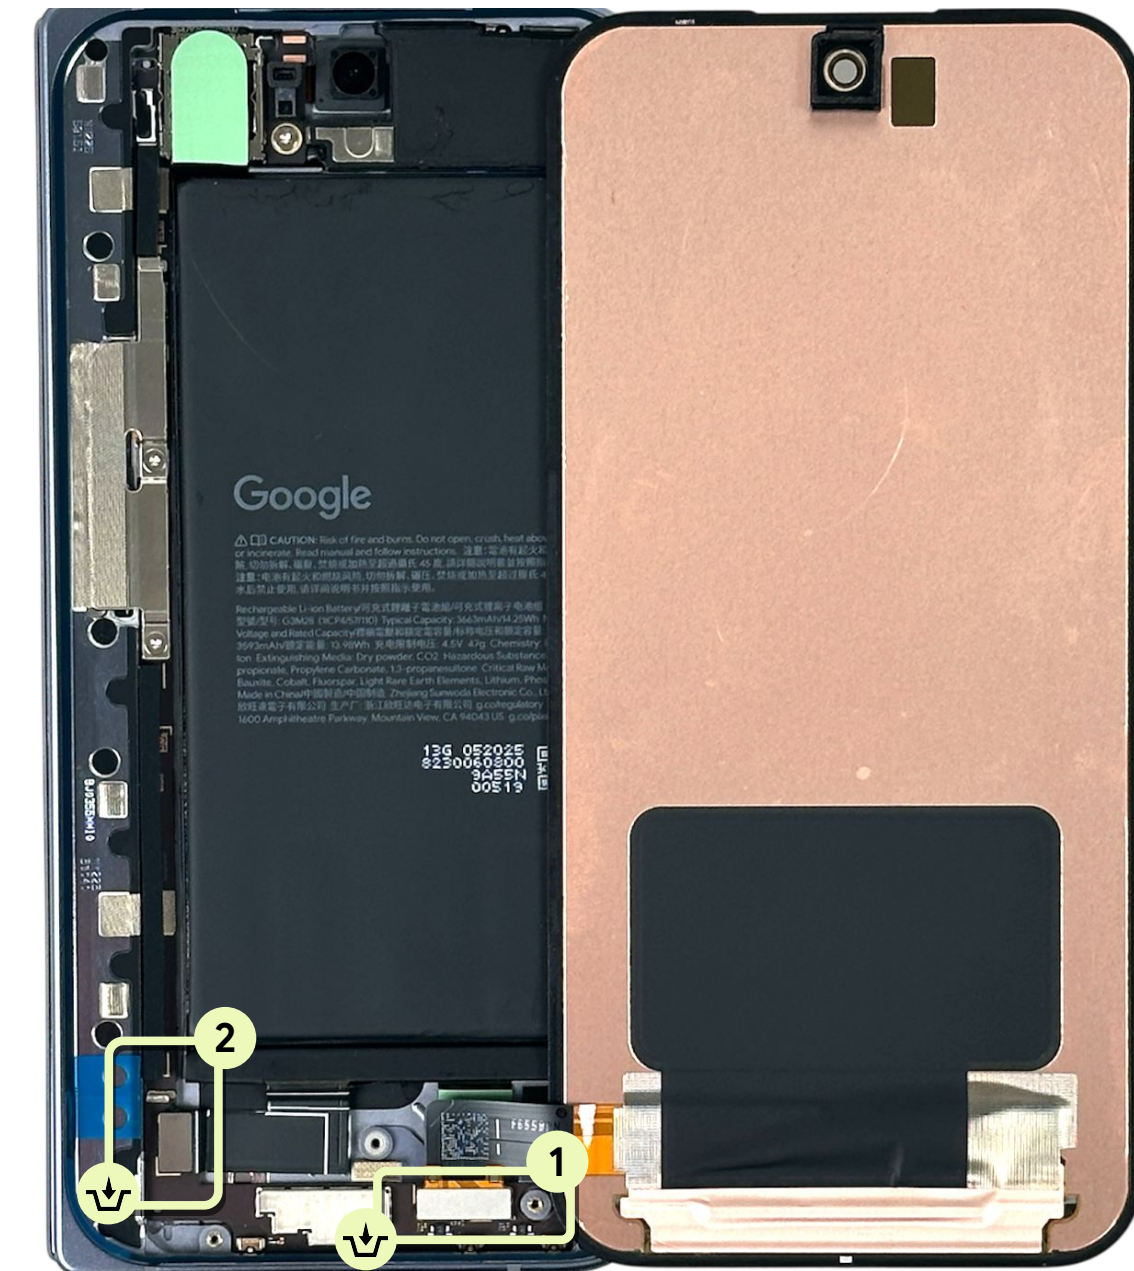

Part: G949-01528-00 (OD sub)

Use caution

When you attach the **OD**, ensure that the **driver IC (COF)** isn't damaged or deformed.

Check if all connectors are fully attached to the **lower board**.

Outer Display

Solution 1: reuse the outer display

Place the OD cowling

- Install the **OD cowling** on the **lower board** with tweezers.
- Fasten **three OD cowling screws** with a **torx plus 3IP screwdriver**, and tighten twice.
- Power on to check the device's functionality and power off afterward.

Part: G250-08248-00 (screw)

Part: G250-08005-21 (screw*2)

Part: G730-09622-01 (OD cowling)

Use caution

Be cautious when you use the screwdriver. Avoid damaging the adjacent battery.

Incorrect use of the screwdriver might result in injuries to yourself or others, as well as damage to the battery or the product.

Note

There's a hook behind the upper side of the cowling. Install the cowling at an angle so that the hook clings to the flex below. Gently pull it downward to ensure proper alignment.

FPS (power button)

Symptom	Potential root cause	Procedure	
 <p>T064: fingerprint sensor failure T068: power button failure</p>	Connectivity issue	<ul style="list-style-type: none"> Check if the connectivity between the fingerprint sensor module connector and the logic board are normal. If they aren't fully attached, reassemble and then test again. 	Connectors location
	Component issue	<ul style="list-style-type: none"> Use a correct fingerprint sensor module and logic board to cross-check with the original ones. Replace the defective component. 	Disassembly <ul style="list-style-type: none"> FPS (inner display sub) Logic board

Volume button

Symptom	Potential root cause	Procedure	
 T069: volume button failure	Connectivity issue	<ul style="list-style-type: none">• Check if the connectivity between the sidekey module and the logic board is normal.• If they aren't fully assembled, reassemble and then test again.	Connectors location
	Component issue	<ul style="list-style-type: none">• Use a correct sidekey module and logic board to cross-check with the original ones.• Replace the defective component.	Disassembly <ul style="list-style-type: none">• Sidekey (inner display sub)• Logic board

Rear camera

Symptom	Potential root cause	Procedure
 <p>T072: camera AR failure T073: camera rear photo quality T074: camera rear video quality T078: can't switch between cameras T079: camera damage T111: main RCAM crashes T112: UW RCAM crashes T114: main RCAM no preview T115: UW RCAM no preview T116: ultrawide rear camera photo quality T117: ultrawide rear camera video quality T196: tele RCAM crashes T197: tele RCAM no preview T198: tele rear camera photo quality T199: tele rear camera video quality</p>	SW problem	Make sure that the SW is already updated to the latest version.
	Cosmetic problem	<ul style="list-style-type: none"> Inspect whether the camera lens area is damaged. Check the function by triage test. Disassemble the device to check if the camera connector is seated properly. Power on the unit and check the camera fail symptom.
	Connectivity problem	Check the rear camera BTB and the logic board side to identify if the assembly is deformed or flex crack, and reboot the device again to check if the fail symptom exists.
	Module problem	<p>If the fail symptom still exists, cross-check the logic board itself or the camera module (UW, WIDE, or tele) to determine if the fail symptom is caused by the camera module or the logic board.</p> <p>Disassembly</p> <ul style="list-style-type: none"> Logic board Rear camera

Outer front camera

Symptom	Potential root cause	Procedure	
 <p>T075: camera front photo quality T076: camera front video quality T078: can't switch between cameras T079: camera damage T110: FCAM crashes T113: FCAM no preview</p>	Cosmetic problem	<ul style="list-style-type: none"> Inspect the camera lens area for damage. Check the function by triage test. Disassemble the device to check if the camera connector is seated properly. Power on the unit and check the camera failure symptom again. 	
	Connectivity problem	Check the outer front camera BTB, upper board, and upper bridge connector side to identify if the assembly is deformed or flex crack, and reboot the device again to check if the fail symptom exists.	Connectors location
	Module problem	If the fail symptom still exists, use a correct logic board, outer camera module, and inner display sub to cross-check with original ones.	Disassembly <ul style="list-style-type: none"> Upper board Outer front camera Inner display sub

Flashlight

Symptom	Potential root cause	Procedure	
 <p>T077: camera flash not working</p>	Connectivity problem	<ul style="list-style-type: none"> Check if the connectivity between the flam FPC of BG and the logic board is normal. If they aren't fully attached, reassemble and then test again. 	Connectors location
	Module problem	<ul style="list-style-type: none"> Use a correct BG sub and logic board to cross-check with the original ones. Replace the defective component. 	Disassembly <ul style="list-style-type: none"> BG sub Logic board

Inner front camera

Symptom	Potential root cause	Procedure	
 <p>T078: can't switch between cameras</p> <p>T079: camera damage</p> <p>T156: camera front inner photo quality</p> <p>T157: camera front inner video quality</p> <p>T158: inner FCAM crashes</p> <p>T159: inner FCAM no preview</p>	<p>Cosmetic problem</p> <hr/> <p>Connectivity problem</p> <hr/> <p>Module problem</p>	<ul style="list-style-type: none"> Inspect the camera lens area for damage. Check the function by triage test. Disassemble the device to check if the camera connector is seated properly. Power on the unit and check the camera fail symptom again. <p>Check the inner front camera BTB and the logic board side to identify if assembly is deformed or flex crack, and reboot device again to check if the fail symptom exists.</p> <p>If the fail symptom still exists, cross-check the logic board itself or the camera module to determine if the fail symptom is caused by the camera module or the logic board.</p>	<p>Connectors location</p> <p>Disassembly</p> <ul style="list-style-type: none"> Inner front camera Logic board

USB

Symptom	Potential root cause	Procedure	
 <p>T085: USB-C failure</p>	Connectivity problem	<ul style="list-style-type: none"> Check the function by triage test. Disassemble the device to check if the logic board is seated properly. Power on the unit, and check the failure symptoms again. 	Connectors location
	Module problem	Check the logic board side to identify if the assembly is deformed and reboot the device again to check if the fail symptom exists.	Disassembly <ul style="list-style-type: none"> Logic board

mmWave

Symptom	Potential root cause	Procedure	
 <p>T105: 5G_low med band failure T106: 5G high band failure</p>	Connectivity problem	<ul style="list-style-type: none"> Inspect the mmWave module and check if the IF FPC is correctly seated. Check if the connectivity between the IF FPC and the logic board is normal. Check if the connectivity between the inner display sub and the logic board is normal. If they aren't fully attached, reassemble and then test again. 	Connectors location
	Module problem	Use a correct mmWave module, IF FPC, and logic board to cross-check with the original ones.	Disassembly <ul style="list-style-type: none"> mmWave IF FPC Logic board

Inner display

Symptom	Potential root cause	Procedure
 <p>T160: inner display blank</p> <p>T161: inner display dead pixel, dark spots, or foreign material</p> <p>T162: inner display bright pixel, bright, or colored spots</p> <p>T163: inner display vertical or horizontal lines</p> <p>T164: inner display black, white, or colored screen</p> <p>T165: inner display flickering or abnormal</p> <p>T166: inner display image quality</p> <p>T167: inner display color mura</p> <p>T168: inner display light leakage</p> <p>T169: inner display backlight issue</p> <p>T170: inner display shadow</p> <p>T171: inner display permanent burnin</p> <p>T172: inner display temporary burnin</p> <p>T173: inner display display single crack</p> <p>T174: inner display displays multiple cracks</p> <p>T175: inner_display_displays cosmetic defects</p> <p>T176: inner display screen is broken but display is working</p> <p>T186: protection film bubbles or delamination at hinge</p> <p>T187: protection film tear or removal</p> <p>T190: bump in Inner_display</p> <p>T191: inner dsplay_patchy thick band of dead pixels</p>	<p>Damage Bubble</p> <hr/> <p>Connectivity problem</p> <hr/> <p>Dead pixels Distorted graphics Flickering Color issues</p> <hr/> <p>Module problem</p>	<p>Inspect the inner display for damage or bubble between display and protective film and replace if necessary.</p> <hr/> <ul style="list-style-type: none"> • Check if the connectivity between the inner display connector and the logic board is normal. • If they aren't fully attached, reassemble and then test again. <hr/> <ul style="list-style-type: none"> • Remove the inner display sub module, fit a replacement part without the adhesive and test. • If the issue is resolved, apply adhesive and fit a new inner display sub module. <hr/> <ul style="list-style-type: none"> • If fail symptom still exists, use a correct inner display sub and logic board to cross-check with the original ones. • Replace the defective component.
		<p>Disassembly</p> <ul style="list-style-type: none"> • Inner display sub • Logic board

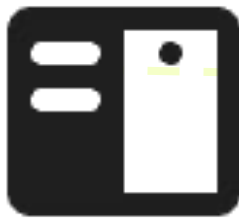

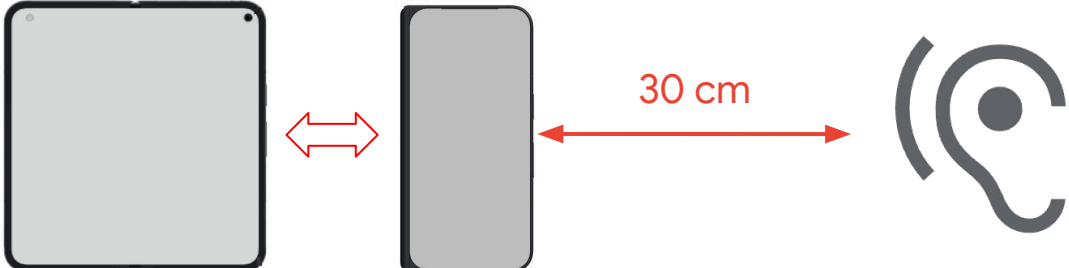

Inner display touch panel

Symptom	Potential root cause	Procedure	
	Connectivity problem	<ul style="list-style-type: none"> Check if the connectivity between the inner display connector and the logic board is normal. If they aren't fully attached, reassemble and then test again. 	Connectors location
<p>T177: inner display multi-touch poor response</p> <p>T178: inner display multi-touch no response</p>	Touch screen	<ul style="list-style-type: none"> Remove the inner display sub module, fit a replacement part without adhesive and test. If the issue is resolved, apply adhesive and fit a new inner display sub module. 	<p>Disassembly</p> <ul style="list-style-type: none"> Inner display sub
<p>T179: inner display multi-touch erratic response</p>	Module problem	<ul style="list-style-type: none"> Use a correct inner display sub and logic board to cross-check With the original ones. Replace the defective component. 	<p>Disassembly</p> <ul style="list-style-type: none"> Inner display sub Logic board

UWB

Symptom	Potential root cause	Procedure	
 T181: ultra-wideband (UWB) failure	Connectivity problem	<ul style="list-style-type: none">• Check if the connectivity between the BG sub and the logic board is normal.• If they aren't fully attached, reassemble and then test again.	Connectors location
	Module problem	<ul style="list-style-type: none">• Use a correct BG sub and logic board to cross-check with the original ones.• Replace the defective component.	Disassembly <ul style="list-style-type: none">• BG sub• Logic board

Hinge

Symptom	Potential root cause	Procedure	
 <p>T188: hinge function abnormal T189: hinge function abnormal CID</p>	Component problem	<ul style="list-style-type: none"> Follow the table below to check if the hinge function is abnormal. Use a correct inner display sub to cross-check with the original ones. Replace the defective component. 	<p>Disassembly</p> <ul style="list-style-type: none"> Inner display sub
Check item	Verification method	Verification photo	
Open angle	Unfold the device completely, then put the device on the holder (ID face down and up) to check if the hinge area has any hump or sunk.	 <p>ID face down or up</p>	
Hinge torque	Put the device on the desk and open it at around 45 degrees and 135 degrees angle to check if the device could hold at 45 degrees and 135 degrees.	 <p>45 degrees or 135 degrees angle</p>	
Hinge noise	Remove the ID process PF before the test. Find a quiet area to listen at 30 cm distance to check if there's noise during folding and unfolding action three times.
