Featured launch: Cloud Identity support in G Suite

Enterprise Identity made easy in G Suite with Cloud Identity

Announced June 27th, 2017

★ Admin feature

[- back to top -](#)

What's new: As an IT administrator, you want to be confident that your users are secure when accessing online services. Millions of G Suite customers already rely on [Google Cloud's identity services](#) to secure their online identities with tools like single sign-on, multi-factor authentication, and mobile device management. However, many G Suite organizations have users who do not require G Suite but still need a secure, online identity.

Introducing Cloud Identity support in G Suite

We are happy to announce the availability of a new free Cloud Identity license for G Suite customers, which enables your non-G Suite users to get access to Google Cloud's identity services. Using Cloud Identity, you can easily create a unified sign-on for all your users across all enterprise cloud apps, set basic mobile device policies, and enforce multi-factor authentication with security keys.

Once you enable Cloud Identity in your Google Admin console, you will be able to create Cloud Identity users in all the ways you create G Suite users; the only difference is that you will not assign these users a G Suite license.

Try it today

To start using Cloud Identity, head to the [Billing page](#) in the Google Admin console. Here you will see a new Cloud Identity card under the "Enable Products" section. Once you enable the Cloud Identity subscription, you will be able to start creating free users without G Suite.

For more information, check out our [Getting Started Guide](#) for G Suite admins.

Work anywhere

Project Fi now available for G Suite customers

Announced on June 27th, 2017

Share with your organization

- [back to top](#) -

What's new: With [Project Fi](#), we aim to provide a wireless service that helps you get a high-quality connection wherever you are—at home, on the go, or even abroad. We've designed the service to intelligently shift between networks so you're always connected to the best available signal, whether that's Wi-Fi or one of our three 4G LTE partner networks.

Project Fi

While Project Fi had been available to users with @gmail.com addresses, starting today we're making G Suite compatible with Project Fi, allowing users (currently US only) to sign up with their G Suite accounts (e.g. you@yourdomain.com). Project Fi is off by default, so G Suite admins will need to [enable](#) Project Fi in the Admin console.

Note: Project Fi limits [group plans](#) to six users; it is not designed for large enterprises.

Check out the [Help Center](#) for more information.

Simple to use

Visualize data instantly with machine learning in Google Sheets

Announced on June 1st, 2017

 Share with your organization

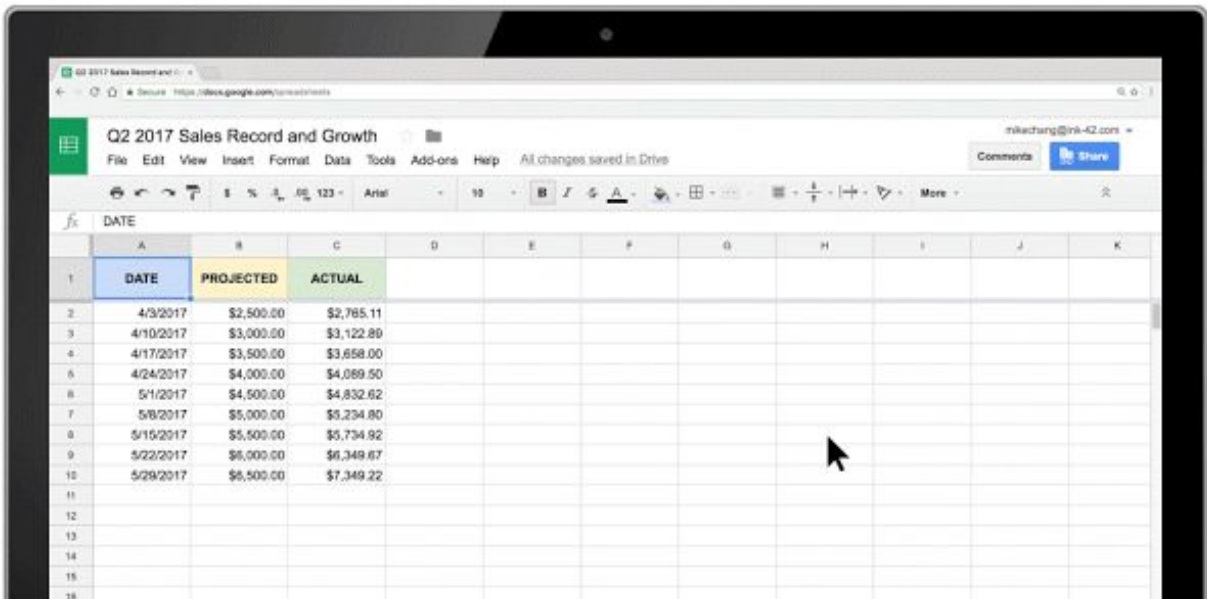

[- back to top -](#)

What's new: Sorting through rows and rows of data in a spreadsheet can be overwhelming. That's why with this launch, we've added new features in Sheets that make it even easier for you to visualize and share your data, and find insights your teams can act on.

Ask and you shall receive → Sheets can build charts for you

[Explore in Sheets](#), powered by [machine intelligence](#), helps teams gain insights from data, instantly. Simply ask questions—in words, not formulas—to quickly analyze your data. For example, you can ask “what is the distribution of products sold?” or “what are average sales on Sundays?” and Explore will help you find the answers.

Now, we're using the same powerful technology in Explore to make visualizing data even more effortless. If you don't see the chart you need, just ask. Instead of manually building charts, ask Explore to do it by typing in “histogram of 2017 customer ratings” or “bar chart for ice cream sales.” Less time spent building charts means more time acting on new insights.

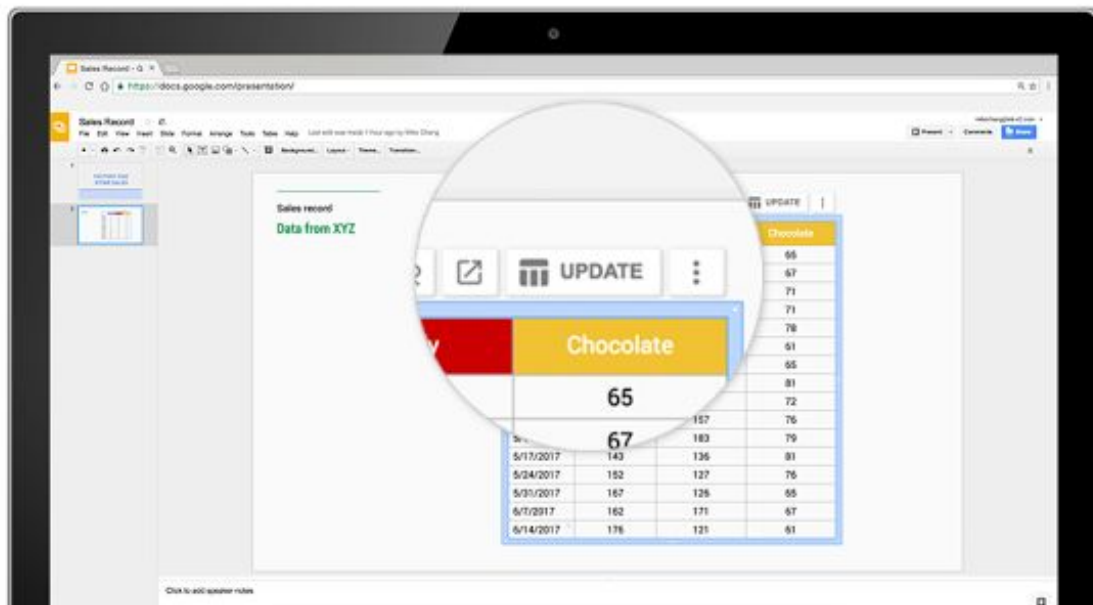

| | DATE | PROJECTED | ACTUAL |
|----|-----------|------------|------------|
| 2 | 4/3/2017 | \$2,500.00 | \$2,765.11 |
| 3 | 4/10/2017 | \$3,000.00 | \$3,122.80 |
| 4 | 4/17/2017 | \$3,500.00 | \$3,658.00 |
| 5 | 4/24/2017 | \$4,000.00 | \$4,089.50 |
| 6 | 5/1/2017 | \$4,500.00 | \$4,832.62 |
| 7 | 5/8/2017 | \$5,000.00 | \$5,234.80 |
| 8 | 5/15/2017 | \$5,500.00 | \$5,734.92 |
| 9 | 5/22/2017 | \$6,000.00 | \$6,349.67 |
| 10 | 5/29/2017 | \$6,500.00 | \$7,349.22 |

Instantly sync your data from Sheets → Docs or Slides

Whether you're preparing a client presentation or sharing sales forecasts, keeping data up-to-date can be time-consuming, especially if you need to update charts or tables in multiple sources. This is why we made it easier to [programmatically update charts](#) in Docs and Slides last year.

Now, we're making it simple to keep tables updated, too. Just copy and paste data from Sheets to Docs or Slides and tap the “update” button to sync your data.

Even more Sheets updates

We're constantly looking for ways to improve our customers' experience in Sheets. Based on your feedback, we're rolling out more updates today to help teams get work done faster:

- **Keyboard shortcuts:** Change default shortcuts in your browser to the same spreadsheet shortcuts you're already used to. For example, delete a row quickly by using "Ctrl+.".
- **Upgraded printing experience:** Preview Sheet data in today's new print interface. Adjust margins, select scale and alignment options or repeat frozen rows and columns before you print your work.
- **Powerful new chart editing experience:** Create and edit charts in a new, improved sidebar. Choose from custom colors in charts or add additional trendlines to model data. You can also create more chart types, like 3D charts. This is now also available for iPhones and iPads.
- **More spreadsheet functions:** We added new functions to help you find insights, bringing the total function count in Sheets to more than 400. Try "SORTN," a function unique to Sheets, which can show you the top three orders or best-performing months in a sales record spreadsheet. Sheets also supports statistical functions like "GAMMADIST," "F.TEST" and "CHISQ.INV.RT."
- **Increased support for charts in the Sheets API:** Use the API to programmatically generate most charts with support for dozens of new operations.

One last thing—so that we can focus our efforts on the improvements to charts outlined above, we're also deprecating one of the lesser-used chart types: the Motion chart. Beginning in July 2017, you will no longer be able to insert or create Motion charts, and, in September 2017, you will no longer be able to edit them.

No earlier than December 2017, any Motion charts still in Sheets will become static images and no longer update when their corresponding data changes. We recommend trying Bubble charts instead.

[Learn how](#) Sheets can help you find valuable insights.

Business ready

More precise, reliable data and other new features in Google Vault

Announced on June 12th, 2017

★ Admin feature

[- back to top -](#)

What's new: When you use Google Vault for your legal and compliance needs, it's important that you have the ability to retain exactly the data you wish and that the data you retrieve from the tool be accurate, precise, and comprehensive. With this launch, we're introducing four new features in Vault to help you address those needs.

Get more detailed metadata when exporting files from Google Drive

When you search for a particular user in Vault for Drive, the results may include files that the user accessed through an "indirect" relationship. This means that the file (or folder containing the file) was:

- shared with a group that the user belongs to,
- shared with the user's entire domain, or
- shared publicly.

Previously, when you exported those search results, you wouldn't see that user listed in the file's export metadata, making it difficult to determine the document's chain of custody. Going forward, you *will* see that user listed, as Vault will now include [information in export metadata](#) about users who accessed a document via an indirect relationship. Additionally, you'll now have the option to see what that user's specific relationship was (e.g. whether the user was a collaborator or viewer).

Export results

Export name

Include access level information for users with indirect access to files. This may increase export duration. [Learn More](#)

 Exports are deleted 15 days from when they are started. To avoid losing your exports, download them as soon as they're available.

[Start export](#) [Cancel](#)

Search in a specific time zone

You can now select the time zone that you want the dates in your search to be based on in Vault. The time zone you select changes the exact boundaries of your search results, so we recommend that you [learn more about the effect of this setting](#) before using it.

Sent date: to

Time zone for this search: [i](#) The time zone you choose can change search results. [Learn More](#)

Terms: [i](#)

For example: `has:attachment is:sent -label:drafts`

Exclude drafts

Set retention policies for all Team Drives

You can now create a custom retention policy that covers all Team Drives in your domain, in addition to the already existing options that cover specific Team Drives and organizational units (OUs).

Set retention policies for specific Google Groups

You can now create custom retention policies that cover specific Google Groups in your domain, in addition to the already existing option to cover all Groups in your domain.

For more information on these features and others in Google Vault, check out the Help Center:

- [Help Center: Search for data](#)
- [Help Center: How Vault exports work](#)

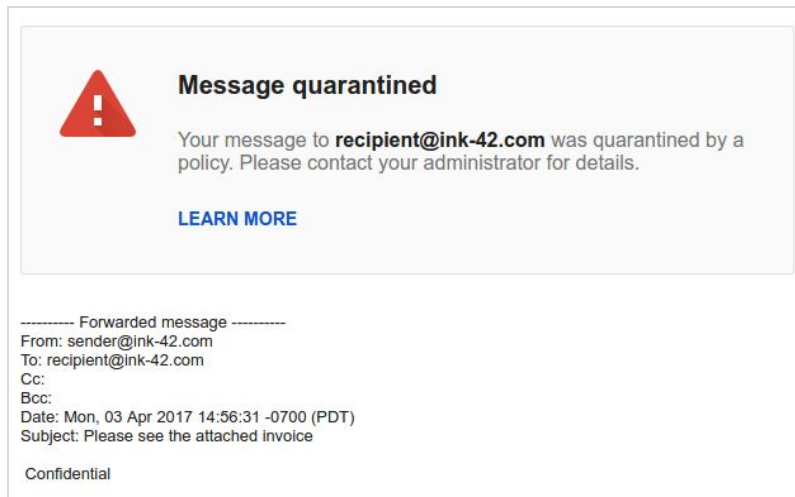

Gmail admins can now notify internal senders when their email is quarantined

Announced on June 15th, 2017

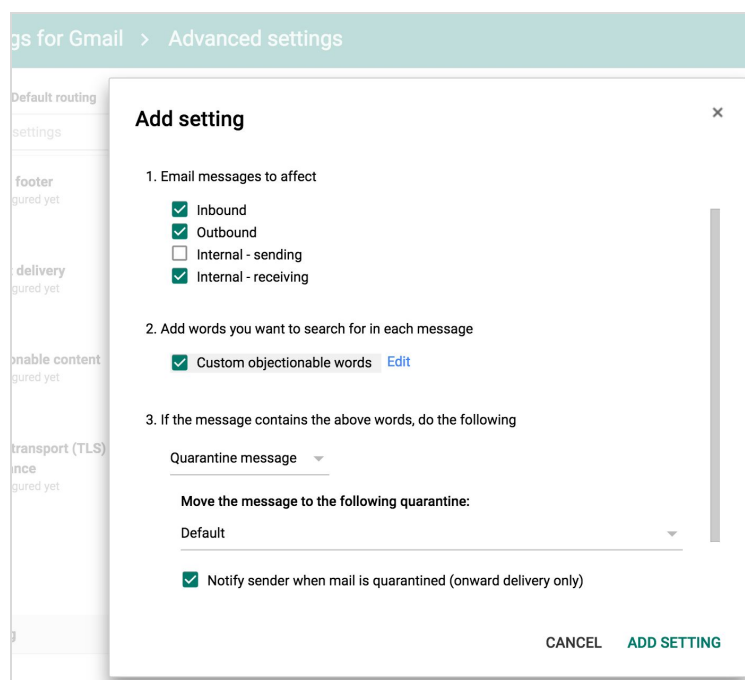

★ Admin feature

[- back to top -](#)

What's new: Through Gmail compliance and routing settings, Gmail administrators can now choose to notify internal senders when their messages get quarantined, depending on your compliance rule. Below is an example of the email that users will receive when their emails get quarantined:

To enable the feature: In the Admin console where you setup and configure policies to quarantine messages, there is now a checkbox at the bottom to "Notify sender when mail is quarantined (onward delivery only)". This feature is default off for existing rules, but when you create a new rule, the default is on.

Check out the Help Center for more information:

- [Routing](#)

Prevent users from creating Team Drives in Google Drive indefinitely

Announced on June 19th, 2017

★ Admin feature

- [back to top](#) -

What's new: When we [launched](#) Team Drives in March, we gave G Suite admins the ability to restrict the creation of Team Drives until January 1st, 2018. Since then, we've heard that some of you need longer-term control of this setting. In response to that feedback, we're now removing the date restriction and allowing you to indefinitely [prevent users](#) in your organization from creating Team Drives.

As a best practice, we recommend *allowing* your users to create Team Drives and produce the workspaces they need for their projects. We suggest restricting Team Drives creation only when needed to aid in the initial deployment of the feature.

Check out the [Help Center](#) for more information on managing your Team Drive users and activity.

Automatically provision users to Asana, Dialpad, Freshdesk, Lucidchart, RingCentral, and Smartsheet

Announced on June 22nd, 2017

★ Admin feature

- [back to top](#) -

What's new: When auto-provisioning is enabled for a supported third-party application, any users created, modified, or deleted in G Suite are automatically added, edited, or deleted in the third-party application as well. This feature is highly popular with admins, as it removes the overhead of managing users across multiple third-party SaaS applications.

With this launch, we've added auto-provisioning support for six new applications: Asana, Dialpad, Freshdesk, Lucidchart, RingCentral, and Smartsheet. We [previously launched](#) auto-provisioning support for Box Enterprise, Salesforce Sandbox, Salesforce, Slack, and Workplace by Facebook, bringing the total number of supporting applications to 11.

G Suite Business, Education, and Enterprise customers can enable auto-provisioning for all eight supported applications. G Suite Basic, Government, and Nonprofit customers can configure auto-provisioning for up to three applications from the [supported list](#).

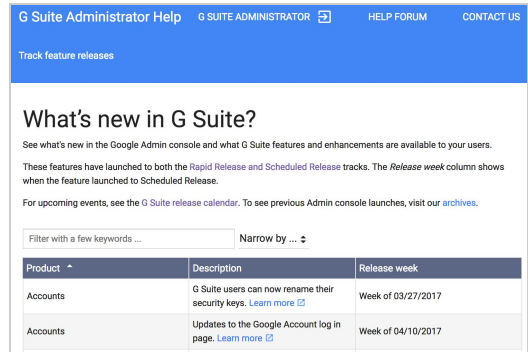

For specific details on how to set up auto-provisioning, check out the [Help Center](#).

Learn more about G Suite

Learn about more G Suite launches in one easy-to-access place

★ Admin resource - [back to top](#) -

As a G Suite admin, it can be difficult to stay on top of the various new products and features we launch on a regular (often daily!) basis. Reading the [G Suite Updates blog](#) is a great start, but the blog doesn't provide a quick snapshot and doesn't cover some smaller feature changes. To help you better track the breadth of G Suite launches, including those that aren't announced on the G Suite Updates blog, we've created a new resource: [What's new in G Suite?](#)

This Help Center article includes a list of new G Suite products and features, all of which are added soon after they're made available to customers on both the [Rapid and Scheduled Release tracks](#). Sort the list by product or week of release, or search for a particular term to find related launches. Click on the "Learn more" links for additional details.

We hope this new resource will make it easier for you to track G Suite launches and communicate them to your organizations. We'd love to hear your thoughts as we continue to iterate and improve, so please use [this form](#) to provide any feedback.

The G Suite Show on YouTube, every Tuesday, 11am PST

🌐 Share with your organization - [back to top](#) -

All new episodes focused on Smart Reply for Gmail, Accessibility, Jamboard, and the Transformation Gallery!

Jimmy and Lily share the updates to [Smart Reply](#). Smart Reply, previously available in Inbox by Gmail and Allo, is now available for Gmail for Android and iOS. It saves you time by providing pre-written responses to your messages. This is especially handy when you need to fire off a quick email on your device.

Work together using Jamboard in G Suite

Jimmy and Drea talk about a subject that's new to The G Suite Show: [Accessibility!](#) This is an introductory episode, highlighting the most common features. For screen readers, we recommend Chrome with Voiceover if you're on a Mac, Firefox with NVDA or JAWS if you're using Windows, and Chrome with ChromeVox if you're on a Chromebook.

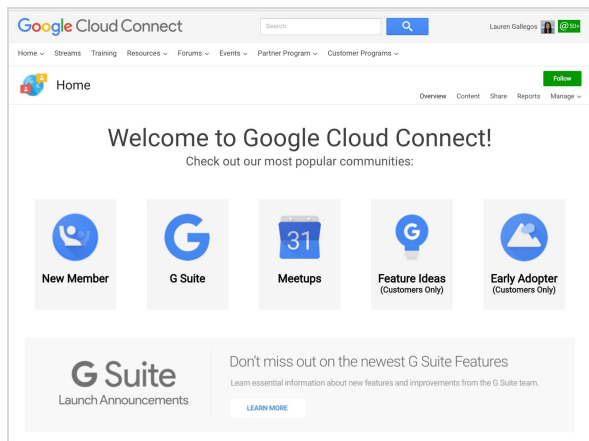

Kevin and Heather tackle time tracking using Forms and Sheets in our latest Transformation Gallery [episode](#). This process can be helpful for smaller teams or projects when allocating time and budget.

In our last episode of the season, Riya and Drea join us to discuss how [G Suite integrates with Jamboard](#). Jamboard is a cloud-based collaborative whiteboard, allowing people to sketch out ideas and inspire one another. And like G Suite, you'll collaborate easier on projects.

Google Cloud Connect (GCC): The official community for G Suite Admins

★ Admin resource

- [back to top](#) -

Sign in today: Google Cloud Connect (GCC) is your one stop shop for resources to make your work with G Suite easier. [Sign in today](#) to discuss best practices, ask questions, and communicate with your peers and Googlers. Don't miss out! Make sure you [follow our Community Manager, Lauren Gallegos](#), to get the weekly buzz.

What's new: In June, we wrapped up our Editorial Calendar for Q2. We added new use cases to our growing catalog, covering topics like [Integration between G Suite and GCP](#) and [Automating your time-off request process with G Suite](#).

To top things off, Kim Wylie continued her blog series on Change Management with articles on [The Power of Positivity in Work, Life and Change Projects](#) and [Getting employees involved in change projects to increase their sense of ownership and improve project success](#). Join us in July for more use cases on your favorite Google Cloud products.

What's New for G Suite Admins videos

★ Admin resource
