Schema for Gmail logs in BigQuery

The schema contains the following fields.

Note: Google occasionally updates the template table schema, for example, to export additional logs data from Gmail into BigQuery. When new fields are added to the template table, the next daily table generated from the template contains the new fields. For this reason, if you want to query new fields, be sure to query daily tables generated after the template was updated.

event_info

| | | | |
|--------------------|--------------------------------------|-------------|----------|
| Type | RECORD | Mode | REQUIRED |
| Description | General information about the event. | | |

event_info.elapsed_time_usec

| | | | |
|--------------------|---|-------------|----------|
| Type | INTEGER | Mode | NULLABLE |
| Description | Time period this event took, in microseconds. | | |

event_info.success

| | | | |
|--------------------|--|-------------|----------|
| Type | BOOLEAN | Mode | REQUIRED |
| Description | True if the event was successful, otherwise false. For example, it would be false if the message was rejected by a policy. | | |

event_info.timestamp_usec

| | | | |
|--------------------|---|-------------|----------|
| Type | INTEGER | Mode | REQUIRED |
| Description | Time when this event started, in the format of a UNIX timestamp, in microseconds. | | |

message_info

| Type | RECORD | Mode | NULLABLE |
|-------------|--|------|----------|
| Description | General information about the email message. | | |

message_info.action_type

| Type | INTEGER | Mode | NULLABLE |
|-------------|-----------------------------------|---|----------|
| Description | The action this event represents. | | |
| | Value | Description | |
| | 1 | Message received by inbound SMTP server. | |
| | 2 | Message accepted by Gmail and prepared for delivery. This is usually the next step following #1, or the first step if you send from Gmail. For incoming messages, policies with reject dispositions are usually evaluated here; for example, and attachment compliance policy that rejects incoming messages. See also #68 . | |
| | 3 | Message was handled by Gmail, for example, delivered to a Gmail mailbox or sent to another server. This is usually the next step following #2. Policies with dispositions other than reject are evaluated here; for example, an attachment compliance policy that strips attachments based on file type or other criteria. | |
| | 10 | Message sent out by outbound SMTP server. | |
| | 14 | A temporary error occurred when Gmail tried to deliver the message, and the message has been scheduled for retry. This is usually caused by external or internal servers that Gmail talks to being temporarily unavailable; retry later. For example, we tried to deliver the message to an external SMTP server, but got a temporary error (4xx) back. | |
| | 18 | Message could not be delivered and was bounced. Sometimes you can find out what happened by reading message_info.description . Common reasons include: <ul style="list-style-type: none">• The recipient server didn't accept our request.• The message could not be delivered due to too many temporary errors (see #14).• The message was rejected due to a deferred policy evaluation.• The recipient is unrecognized and there's no policy triggered to change the primary delivery route. | |

| | |
|--|--|
| | <p>19 Message was dropped by Gmail. Common reasons include:</p> <ul style="list-style-type: none"> • If a message being sent triggers admin quarantine consequences, the original message is dropped and a copy of the message is added in the Admin Quarantine. • For a journaling message, the wrapped inner message is delivered, while the original message is dropped. • For inbound messages, Gmail can block and drop messages for example, if: <ul style="list-style-type: none"> ◦ The message was not RFC 5322-compliant ◦ The sender violates bulk senders guidelines • If a policy removed the primary delivery route and added other routes, the original message is dropped and copies are delivered to the added routes. • If the recipient is an unrecognized address and there's a policy that adds additional routes, the original message is dropped and copies are delivered to the added routes. <p>48 Message received by inbound SMTP server for relay.</p> <p>49 Message sent via relay by outbound SMTP server.</p> <p>55 Message was re-inserted into Gmail, as caused by policies that modify the primary delivery route or envelope recipient.</p> <p>68 Message accepted by Gmail and prepared for delivery. This is similar to #2, with the distinction that the message was accepted from (sent via) a Gmail server.</p> <p>69 The user changed the message's spam classification, for example, by marking it as spam, phishing, not-spam, in Gmail.</p> <p>70 Message reclassified as spam, phishing, etc., after it was delivered to Gmail.</p> |
|--|--|

message_info.attachment

| Type | RECORD | Mode | REPEATED |
|-------------|--|------|----------|
| Description | Information about the message's attachments. This record is repeated for every attachment. | | |

message_info.attachment.file_extension_type

| Type | STRING | Mode | NULLABLE |
|------|--------|------|----------|
|------|--------|------|----------|

| | |
|--------------------|---|
| Description | File extension (not mime part type). Doesn't include the dot. |
|--------------------|---|

message_info.attachment.malware_family

| Type | INTEGER | Mode | NULLABLE | | | | | | | | | | | | |
|-------------|---|---|----------|-------|-------------|---|--|---|----------------------------------|---|----------------------------------|---|---|---|------------------------|
| Description | Malware category, if detected. Field is unset if no malware was detected when the message was handled. | | | | | | | | | | | | | | |
| | <table><thead><tr><th>Value</th><th>Description</th></tr></thead><tbody><tr><td>1</td><td>A known malicious program type of malware.</td></tr><tr><td>2</td><td>A virus or worm type of malware.</td></tr><tr><td>3</td><td>Content of email may be harmful.</td></tr><tr><td>4</td><td>Content of email may potentially be unwanted.</td></tr><tr><td>5</td><td>Other type of malware.</td></tr></tbody></table> | | | Value | Description | 1 | A known malicious program type of malware. | 2 | A virus or worm type of malware. | 3 | Content of email may be harmful. | 4 | Content of email may potentially be unwanted. | 5 | Other type of malware. |
| | Value | Description | | | | | | | | | | | | | |
| | 1 | A known malicious program type of malware. | | | | | | | | | | | | | |
| | 2 | A virus or worm type of malware. | | | | | | | | | | | | | |
| | 3 | Content of email may be harmful. | | | | | | | | | | | | | |
| | 4 | Content of email may potentially be unwanted. | | | | | | | | | | | | | |
| 5 | Other type of malware. | | | | | | | | | | | | | | |

message_info.attachment.sha256

| | | | |
|--------------------|--------------------------------|-------------|----------|
| Type | STRING | Mode | NULLABLE |
| Description | SHA256 hash of the attachment. | | |

message_info.connection_info

| | | | |
|--------------------|--|-------------|----------|
| Type | RECORD | Mode | NULLABLE |
| Description | Information about the connection on which the message was transferred. | | |

message_info.connection_info.authenticated_domain

| Type | RECORD | Mode | REPEATED |
|-------------|---|------|----------|
| Description | List of authenticated domain names and authentication mechanisms. | | |

message_info.connection_info.authenticated_domain.name

| Type | STRING | Mode | NULLABLE |
|-------------|--------------------------------|------|----------|
| Description | The authenticated domain name. | | |

message_info.connection_info.authenticated_domain.type

| Type | INTEGER | Mode | NULLABLE |
|-------------|--|-------------|----------|
| Description | Message authentication type. For example, SPF, DKIM. | | |
| | Value | Description | |
| | 1 | SPF | |
| | 2 | DKIM | |
| | 3 | DKIM_PROXY | |
| | 4 | XOAR_SPF | |
| | 5 | XOAR_DKIM | |

message_info.connection_info.client_host_zone

| Type | STRING | Mode | NULLABLE |
|-------------|--------------------------------------|------|----------|
| Description | Client host zone of the mail sender. | | |

message_info.connection_info.client_ip

| | | | |
|--------------------|---|-------------|----------|
| Type | STRING | Mode | NULLABLE |
| Description | IP address of the mail client that started the message. | | |

message_info.connection_info.dkim_pass

| | | | |
|--------------------|--|-------------|----------|
| Type | BOOLEAN | Mode | NULLABLE |
| Description | Whether the message authenticated using at least one DKIM signature. | | |

message_info.connection_info.dmarc_pass

| | | | |
|--------------------|---|-------------|----------|
| Type | BOOLEAN | Mode | NULLABLE |
| Description | Whether the message passed DMARC policy evaluation. | | |

message_info.connection_info.dmarc_published_domain

| | | | |
|--------------------|--|-------------|----------|
| Type | STRING | Mode | NULLABLE |
| Description | Domain name used to evaluate the DMARC policy. | | |

message_info.connection_info.failed_smtp_out_connect_ip

| | | | |
|--------------------|--|-------------|----------|
| Type | STRING | Mode | REPEATED |
| Description | List of all IPs in the remote MX record that Gmail attempted to connect to and failed. | | |

message_info.connection_info.ip_geo_city

| | | | |
|--------------------|--|-------------|----------|
| Type | STRING | Mode | NULLABLE |
| Description | Nearest city computed based on the relay IP. | | |

message_info.connection_info.ip_geo_country

| | | | |
|--------------------|---|-------------|----------|
| Type | STRING | Mode | NULLABLE |
| Description | ISO country code based on the relay IP. | | |

message_info.connection_info.is_internal

| | | | |
|--------------------|---|-------------|----------|
| Type | BOOLEAN | Mode | NULLABLE |
| Description | Whether the message is sent within domains owned by the customer. | | |

message_info.connection_info.is_intra_domain

| | | | |
|--------------------|---|-------------|----------|
| Type | BOOLEAN | Mode | NULLABLE |
| Description | Whether the message is sent within the same domain. | | |

message_info.connection_info.smtp_in_connect_ip

| | | | |
|--------------------|---|-------------|----------|
| Type | STRING | Mode | NULLABLE |
| Description | Remote IP address for MTA client connections (inbound SMTP to Gmail). | | |

message_info.connection_info.smtp_out_connect_ip

| Type | STRING | Mode | NULLABLE |
|-------------|--|------|----------|
| Description | Remote IP address for SMTP connections from Gmail. | | |

message_info.connection_info.smtp_out_remote_host

| Type | STRING | Mode | NULLABLE |
|-------------|---|------|----------|
| Description | For outgoing SMTP connections, the domain we started from; the destination domain or the smarthost. | | |

message_info.connection_info.smtp_reply_code

| Type | INTEGER | Mode | NULLABLE |
|-------------|--|------|----------|
| Description | SMTP reply code for inbound and outbound SMTP connections. Generally 2xx, 4xx, or 5xx. | | |

message_info.connection_info.smtp_response_reason

| Type | INTEGER | Mode | NULLABLE |
|-------------|--|--|----------|
| Description | Detailed reason for the SMTP reply code for inbound connections. | | |
| | Value | Description | |
| | 1 | The default reason messages are rejected/accepted. | |
| | 3 | Malware. | |
| | 4 | DMARC policy. | |
| | 5 | Unsupported attachment (by Gmail). | |
| | 6 | Receive limit exceeded. | |
| | 7 | Account over quota. | |

| | | |
|--|----|---|
| | 8 | Bad PTR record. |
| | 9 | Recipient doesn't exist. |
| | 10 | Customer policy. |
| | 12 | RFC violation. |
| | 13 | Blatant spam. |
| | 14 | Denial of service. |
| | 15 | Malicious or spammy links. |
| | 16 | Low IP reputation. |
| | 17 | Low domain reputation. |
| | 18 | IP listed in public Real-time Blackhole List (RBL). |

message_info.connection_info.smtp_tls_state

| Type | INTEGER | Mode | NULLABLE |
|--------------------|--|--------------------|----------|
| Description | Type of connection made to the SMTP server, only set for logs of events that explicitly handle SMTP connections. | | |
| | Value | Description | |
| | 0 | Not TLS. | |
| | 1 | TLS. | |

message_info.connection_info.smtp_user_agent_ip

| Type | STRING | Mode | NULLABLE |
|--------------------|--|------|----------|
| Description | IP address of the mail user agent, for inbound SMTP connections. | | |

message_info.connection_info.spf_pass

| | | | |
|--------------------|--|-------------|----------|
| Type | BOOLEAN | Mode | NULLABLE |
| Description | Whether the message authenticated using SPF mechanism. | | |

message_info.connection_info.tls_required_but_unavailable

| | | | |
|--------------------|---|-------------|----------|
| Type | BOOLEAN | Mode | NULLABLE |
| Description | TLS required for an outbound SMTP connection, but no valid certificate was present. | | |

message_info.description

| | | | |
|--------------------|--|-------------|----------|
| Type | STRING | Mode | NULLABLE |
| Description | Human-friendly description about what happened to the message. | | |

message_info.destination

| | | | |
|--------------------|--|-------------|----------|
| Type | RECORD | Mode | REPEATED |
| Description | Information about message recipients; this record is repeated for every recipient. | | |

message_info.destination.address

| | | | |
|--------------------|---------------------------------|-------------|----------|
| Type | STRING | Mode | NULLABLE |
| Description | Email address of the recipient. | | |

message_info.destination.selector

| Type | STRING | Mode | NULLABLE |
|-------------|--|------|----------|
| Description | Subcategory for each service. See message_info.destination.service for an explanation of the different values. | | |

message_info.destination.service

| Type | STRING | Mode | NULLABLE |
|-------------|--|------------------------|--|
| Description | The service to where this message went. There are many service and selector pairs for destinations. You can use these two fields to determine to which service the message was sent. | | |
| | Service | Selector | Description |
| | gmail-ui | sent-on-behalf-of-user | Message was sent to Gmail and kept as a copy in the user's Gmail Sent label. |
| | gmail-ui | null | Message was sent to Gmail. |
| | mailing-list-server | spam-check | Message was sent to Google Groups and was spam-checked. |
| | mailing-list-server | null | Message was sent to Google Groups. |
| | mailing-list-server | moderation | Message was sent to Google Groups and is pending administrator's moderation. |
| | mailing-list-server | archive | Message was sent to Google Groups and is archived. |
| | gmail-for-work-catchall | | Message had unrecognized recipients and was delivered according to a catch-all rule. |
| | smtp-outbound | gmail-delivery-server | Message was sent to outbound SMTP server and handled by Gmail delivery servers. |
| | smtp-outbound | google-apps-for-work | Message was sent to outbound SMTP server and handled by G Suite Basic. |

| | | | |
|--|---------------|------------------------------|--|
| | smtp-outbound | google-apps-for-work-starter | Message was sent to outbound SMTP server and handled by G Suite Basic. |
| | smtp-outbound | gmail-notification | Message was sent to outbound SMTP server and handled by Gmail notification. |
| | smtp-outbound | relay | Message was sent to outbound SMTP server and handled by Gmail relay servers. |
| | smtp-outbound | gmail | Message was sent to outbound SMTP server. |
| | smtp-outbound | gmail-for-work | Message was sent to outbound SMTP server and added by Gmail for business policies. |
| | smtp-outbound | null | Message was sent to outbound SMTP server. |

message_info.destination.smime_decryption_success

| Type | BOOLEAN | Mode | NULLABLE |
|-------------|---|------|----------|
| Description | For inbound messages only. When set, indicates that S/MIME decryption was attempted for this recipient (not set if skipped), and the value indicates the completion status. | | |

message_info.destination.smime_extraction_success

| Type | BOOLEAN | Mode | NULLABLE |
|-------------|---|------|----------|
| Description | For inbound messages only. When set, indicates that S/MIME extraction was attempted for this recipient (not set if skipped), and the value indicates the completion status. | | |

message_info.destination.smime_parsing_success

| Type | BOOLEAN | Mode | NULLABLE |
|------|---------|------|----------|
|------|---------|------|----------|

| | |
|--------------------|--|
| Description | For inbound messages only. When set, indicates that S/MIME parsing was attempted for this recipient (not set if skipped), and the value indicates the completion status. |
|--------------------|--|

message_info.destination.smime_signature_verification_success

| Type | BOOLEAN | Mode | NULLABLE |
|-------------|---|------|----------|
| Description | For inbound messages only. When set, indicates that S/MIME signature verification was attempted for this recipient (not set if skipped), and the value indicates the completion status. | | |

message_info.flattened_destinations

| Type | STRING | Mode | NULLABLE |
|-------------|--|------|----------|
| Description | String that has information of all recipients flattened, in the format "service_for_recipient1:selector_for_recipient1:address_for_recipient1, service_for_recipient2:selector_for_recipient2:address_for_recipient2". | | |

message_info.flattened_triggered_rule_info

| Type | STRING | Mode | NULLABLE |
|-------------|--|------|----------|
| Description | String that has information of all triggered rules in JSON format. | | |

message_info.is_policy_check_for_sender

| Type | BOOLEAN | Mode | NULLABLE |
|-------------|--|------|----------|
| Description | True if the policy rules were evaluated for the sender, meaning the message was processed for outbound delivery. False if policy rules were evaluated for the recipient, for inbound messages. | | |

message_info.is_spam

| Type | BOOLEAN | Mode | NULLABLE |
|-------------|---|------|----------|
| Description | True if the message was classified as spam. | | |

message_info.link_domain

| Type | STRING | Mode | REPEATED |
|-------------|---|------|----------|
| Description | These are domains extracted from link URLs in the message body. | | |

message_info.message_set

| Type | RECORD | Mode | REPEATED |
|-------------|--|------|----------|
| Description | Message set type the message is a member of. See message_info.message_set.type . | | |

message_info.message_set.type

| Type | INTEGER | Mode | NULLABLE |
|-------------|---|--|----------|
| Description | Message set types are attributes that describe the message. For example, if the message was inbound, outbound, or internal. | | |
| | Value | Description | |
| | 1 | Message is inbound, that is, received from outside your domains. This message set doesn't appear simultaneously with message set #10. | |
| | 2 | Message is outbound, that is, sent to a recipient outside your domains. This message set doesn't appear simultaneously with message set #10. | |
| | 7 | Message was classified as spam by Gmail. | |
| | 8 | Message being sent; an outgoing message. | |
| | 9 | Message being received; an incoming message. | |
| | 10 | Message is internal to your domains. | |
| | 11 | Message had a sender or recipients outside your domains. Or, for received messages, and if message set #27 is missing, this means we couldn't authenticate the sender; the message was treated as having a sender outside your domain. | |
| | 12 | Message had some recipients internal to your domain and some recipients | |

| | |
|--|---|
| | <p>outside your domain. This message set may appear only when:</p> <ul style="list-style-type: none"> • There are multiple recipients. • A message is being sent (for message being received, we enforce that the recipients all belong to the same domain). • Action type for the message is #2 (we split multi-recipient messages to single-recipient messages after that). <p>27 The sender has successfully passed SPF/DKIM/DMARC authentication. If the sender isn't authenticated, then we don't trust the sender domain; the message won't be considered internal.</p> <p>47 Message was detected to be spam by tag-and-deliver information in your inbound gateway settings.</p> |
|--|---|

message_info.num_message_attachments

| Type | INTEGER | Mode | NULLABLE |
|-------------|--------------------------------|------|----------|
| Description | Number of message attachments. | | |

message_info.payload_size

| Type | INTEGER | Mode | NULLABLE |
|-------------|---------------------------------------|------|----------|
| Description | Size of the message payload in bytes. | | |

message_info.rfc2822_message_id

| Type | STRING | Mode | NULLABLE |
|-------------|---|------|----------|
| Description | RFC 2822 message ID for the message. For example, you can find this by selecting "Show Original" on a message in Gmail. | | |

message_info.smime_content_type

| Type | INTEGER | Mode | NULLABLE |
|-------------|--|---|----------|
| Description | The top-level S/MIME type of a message, as indicated by the Content-Type header. | | |
| | Value | Description | |
| | 0 | The message does not have a recognized S/MIME Content-Type. | |
| | 1 | An S/MIME message with a detached signature, indicated by content type "multipart/signed" with parameter "protocol=application/pkcs7-signature". | |
| | 2 | An S/MIME message with an opaque signature, indicated by content type "application/pkcs7-mime" or "application/x-pkcs7-mime" with parameter "smime-type=signed-data". | |
| | 3 | An S/MIME message that is encrypted, indicated by content type "application/pkcs7-mime" or "application/x-pkcs7-mime" with parameter "smime-type=enveloped-data". | |
| | 4 | An S/MIME message that is compressed, indicated by content type "application/pkcs7-mime" or "application/x-pkcs7-mime" with parameter "smime-type=compressed-data". | |

message_info.smime_encrypt_message

| Type | BOOLEAN | Mode | NULLABLE |
|-------------|---|------|----------|
| Description | For outbound messages only. When set and true, indicates message should be encrypted. | | |

message_info.smime_extraction_success

| Type | BOOLEAN | Mode | NULLABLE |
|-------------|---|------|----------|
| Description | When set, indicates that inbound S/MIME processing occurred (not set if skipped), and the value indicates the completion status. Note: currently not set. | | |

message_info.smime_packaging_success

| Type | BOOLEAN | Mode | NULLABLE |
|-------------|---|------|----------|
| Description | For outbound messages only. When set, indicates that smime packaging was attempted (not set if skipped), and the value indicates the completion status. | | |

message_info.smime_sign_message

| Type | BOOLEAN | Mode | NULLABLE |
|-------------|--|------|----------|
| Description | For outbound messages only. When set and true, indicates message should be signed. | | |

message_info.smtp_relay_error

| Type | INTEGER | Mode | NULLABLE |
|-------------|--|-----------------------------------|----------|
| Description | If Gmail rejected an SMTP relay request, this error code provides additional information about the cause of the rejection. | | |
| | Value | Description | |
| | 1 | Authentication error. | |
| | 2 | Daily rate limit was exceeded. | |
| | 3 | Peak rate limit was exceeded. | |
| | 4 | SMTP relay was abused. | |
| | 5 | Per-user rate limit was exceeded. | |

message_info.source

| Type | RECORD | Mode | NULLABLE |
|-------------|-------------------------------|------|----------|
| Description | Information about the sender. | | |

message_info.source.address

| | | | |
|--------------------|----------------------------------|-------------|----------|
| Type | STRING | Mode | NULLABLE |
| Description | The email address of the sender. | | |

message_info.source.from_header_address

| | | | |
|--------------------|--|-------------|----------|
| Type | STRING | Mode | NULLABLE |
| Description | From header address as it appears in the message headers, for example, foo@domain.com. | | |

message_info.source.from_header_displayname

| | | | |
|--------------------|---|-------------|----------|
| Type | STRING | Mode | NULLABLE |
| Description | From header display name as it appears in the message headers, for example, "User Foo". | | |

message_info.source.selector

| | | | |
|--------------------|--|-------------|----------|
| Type | STRING | Mode | NULLABLE |
| Description | A subcategory of the source server. See message_info.source.service for a description of different values. | | |

message_info.source.service

| Type | STRING | Mode | NULLABLE |
|--------------------|--|-------------------|--|
| Description | The source service for this message. There are many service and selector pairs for sender. You can use these two fields to determine which service the message was from and why the message was generated. | | |
| | Service | Selector | Description |
| | calendar | send | Notifications from Google Calendar. |
| | gmail-ui | read-receipt | Gmail read-receipt feature. |
| | gmail-ui | autoforward | Gmail autoforward feature. |
| | gmail-ui | unsubscribe | Gmail unsubscribe feature. |
| | gmail-ui | canned-response | Message sent by Gmail Canned Response feature. |
| | gmail-ui | vacation-response | Gmail vacation response feature. |
| | gmail-ui | send | Message sent from Gmail web UI. |
| | docs | share | Sharing notification from Google Drive. |
| | groups | groups-ui | Message sent from Google Groups. |
| | keep | invites | Invitation email sent by Google Keep. |
| | mailing-list-server | custom-replies | Auto-replies from Google Groups. |
| | mailing-list-server | null | Sent from Google Groups. |
| | mailing-list-server | moderation | Sent from Google Groups moderation. |
| | mailing-list-server | to-archive | Sent from Google Groups archive. |
| | google-apps-script | user | Sent from Google Apps Script. |
| | mail-fetcher | null | Message pulled by Gmail Mail Fetcher |
| | gmail-for-work | spam-redelivery | User requests a (possibly a false |

| | | | |
|--|-----------------------|----------------------------|--|
| | | | positive) spam message to be redelivered to their non-Gmail mailbox; or, this is a quarantine summary (spam folder summary) sent to the non-Gmail mailbox. |
| | gmail-for-work | qsum-delivery | Periodic report is sent to the user detailing the contents of the Spam label and (optionally) the Inbox label. |
| | gmail-for-work | quarantine-delivery | Message released from the Quarantine Manager. |
| | gmail-for-work | quarantine-notification | Non-delivery response sent to the original sender of a denied quarantined message. |
| | gmail-for-work | policy | Message triggered some setting configured by the domain administrator. |
| | gmail-for-work | comprehensive-mail-storage | Sent to Gmail servers due to a Comprehensive Mail Storage setting. |
| | smtp-inbound | null | Message inserted from Google's SMTP servers to Gmail delivery pipeline. |
| | smtp-msa | null | Message inserted from Google's SMTP servers, in authenticated mode, to the Gmail delivery pipeline. |
| | smtp-relay | gmail-for-work | Messages routed through the SMTP Relay setting. |
| | google-spreadsheets | google-forms-receipt | Notifications from Google Sheets. |
| | google-spreadsheets | google-forms-invite | Sharing invites from Google Sheets. |
| | unified-notifications | google-apps | Notification from G Suite |
| | unified-notifications | null | Notification from a Google system. |

message_info.spam_info

| Type | RECORD | Mode | NULLABLE |
|-------------|----------------------------------|------|----------|
| Description | Spam classification information. | | |

message_info.spam_info.classification_reason

| Type | INTEGER | Mode | NULLABLE |
|-------------|---|---|----------|
| Description | Reason the message was classified as spam, phishing, etc. | | |
| | Value | Description | |
| | 1 | Default spam classification reason. | |
| | 2 | Message classified as such because of user's past actions. | |
| | 3 | Suspicious content. | |
| | 4 | Suspicious link. | |
| | 5 | Suspicious attachment. | |
| | 6 | Custom policy defined in G Suite Admin Console, Gmail settings. | |
| | 7 | DMARC. | |
| | 8 | Domain in public RBLs. | |
| | 9 | RFC standards violation. | |
| | 10 | Gmail policy violation. | |
| | 11 | Machine learning verdict. | |
| | 12 | Sender reputation. | |
| | 13 | Blatant spam. | |

message_info.spam_info.classification_timestamp_usec

| Type | INTEGER | Mode | NULLABLE |
|-------------|--|------|----------|
| Description | Message spam classification timestamp. | | |

message_info.spam_info.disposition

| Type | INTEGER | Mode | NULLABLE | | | | | | | | | | | | |
|-------------|--|------|----------|-------|-------------|---|--|---|-------|---|-----------|---|-------------|---|----------|
| Description | <p>The outcome of the Gmail spam classification.</p> <table><tr><th>Value</th><th>Description</th></tr><tr><td>1</td><td>Message considered “clean” (not spam/malware).</td></tr><tr><td>2</td><td>Spam.</td></tr><tr><td>3</td><td>Phishing.</td></tr><tr><td>4</td><td>Suspicious.</td></tr><tr><td>5</td><td>Malware.</td></tr></table> | | | Value | Description | 1 | Message considered “clean” (not spam/malware). | 2 | Spam. | 3 | Phishing. | 4 | Suspicious. | 5 | Malware. |
| Value | Description | | | | | | | | | | | | | | |
| 1 | Message considered “clean” (not spam/malware). | | | | | | | | | | | | | | |
| 2 | Spam. | | | | | | | | | | | | | | |
| 3 | Phishing. | | | | | | | | | | | | | | |
| 4 | Suspicious. | | | | | | | | | | | | | | |
| 5 | Malware. | | | | | | | | | | | | | | |

message_info.spam_info.ip_whitelist_entry

| Type | STRING | Mode | NULLABLE |
|-------------|---|------|----------|
| Description | The IP whitelist entry that informed the classification disposition when the message was classified as such due to a custom rule in Gmail settings. | | |

message_info.structured_policy_log_info

| Type | RECORD | Mode | NULLABLE |
|-------------|--|------|----------|
| Description | Structured information about policies that were evaluated for the message. This currently includes information about journaling and detected file types. | | |

message_info.structured_policy_log_info.detected_file_types

| Type | RECORD | Mode | REPEATED |
|-------------|-------------------------------|------|----------|
| Description | Information about file types. | | |

message_info.structured_policy_log_info.detected_file_types.category

| Type | INTEGER | Mode | NULLABLE |
|-------------|---|--|----------|
| Description | MIME type category. | | |
| | Value | Description | |
| | 1 | Unrecognized file type. | |
| | 2 | Office documents, for example, word processing, spreadsheet, presentation, database, PDF, etc. The file may or may not be encrypted. | |
| | 3 | Video and multimedia, for example, MPEG, Quicktime, WMV, etc. | |
| | 4 | Music and audio, for example, MP3, AAC, WAV, etc. | |
| | 5 | Images, for example, JPEG, BMP, GIF, etc. | |
| | 6 | Archives, for example, ZIP, TAR, TGZ, etc. | |
| | 7 | Executables, for example EXE, COM, JS, etc. | |
| | 8 | Office documents which are encrypted. | |
| 9 | Office documents which are not encrypted. | | |

message_info.structured_policy_log_info.detected_file_types.mime_type

| Type | STRING | Mode | NULLABLE |
|-------------|------------------------|------|----------|
| Description | MIME type of the file. | | |

message_info.structured_policy_log_info.exchange_journal_info

| Type | RECORD | Mode | NULLABLE |
|-------------|---|------|----------|
| Description | Information about Exchange journaling of the message. | | |

message_info.structured_policy_log_info.exchange_journal_info.recipients

| Type | STRING | Mode | REPEATED |
|-------------|--|------|----------|
| Description | Domain recipients for the journaled message known to Google. | | |

message_info.structured_policy_log_info.exchange_journal_info.rfc822_message_id

| Type | STRING | Mode | NULLABLE |
|-------------|--|------|----------|
| Description | RFC 822 message ID of the journaled message. | | |

message_info.structured_policy_log_info.exchange_journal_info.timestamp

| Type | INTEGER | Mode | NULLABLE |
|-------------|---|------|----------|
| Description | The timestamp of the journaled message, in seconds. | | |

message_info.structured_policy_log_info.exchange_journal_info.unknown_recipients

| Type | STRING | Mode | REPEATED |
|-------------|--|------|----------|
| Description | Domain recipients for the journaled message unknown to Google. | | |

message_info.subject

| Type | STRING | Mode | NULLABLE |
|-------------|------------------------|------|----------|
| Description | The message's subject. | | |

message_info.triggered_rule_info

| Type | RECORD | Mode | REPEATED |
|-------------|---|------|----------|
| Description | Information about policy rules triggered for the message. | | |

message_info.triggered_rule_info.consequence

| Type | RECORD | Mode | REPEATED |
|-------------|--|------|----------|
| Description | Information about a consequence applied to the message due to this triggered rule. | | |

message_info.triggered_rule_info.consequence.action

| Type | INTEGER | Mode | NULLABLE |
|-------------|-----------------------------------|--|----------|
| Description | Action taken for the consequence. | | |
| | Value | Description | |
| | 0 | Consequence is a no-op. | |
| | 3 | Put message in Admin Quarantine. | |
| | 4 | Modify the primary delivery target. | |
| | 5 | Add a delivery target. | |
| | 6 | Added a message header. | |
| | 7 | Overwrite the envelope recipient. | |
| | 9 | Add message to specified message set. | |
| | 10 | Modify the message's labels. | |
| | 11 | Prefix text to message subject. | |
| | 12 | Add a footer to the message. | |
| | 13 | Strip the message body. | |
| | 14 | Store a copy of the message in the user's mailbox, per comprehensive mail storage setting. | |
| | 15 | Replace attachment with canned text. | |
| | 16 | Require secure message delivery. | |
| | 17 | Message can't be delivered; bounced. | |
| | 18 | Archive to Google Vault for recipients. | |
| | 19 | Skip Gmail spam checks. | |

message_info.triggered_rule_info.consequence.reason

| Type | STRING | Mode | NULLABLE |
|-------------|---|------|----------|
| Description | Reason the consequence was applied. Usually contains the unique description of a rule that triggered the consequence. | | |

message_info.triggered_rule_info.consequence.subconsequence

| Type | RECORD | Mode | REPEATED |
|-------------|--|------|----------|
| Description | Information about a subconsequence of the primary consequence. | | |

message_info.triggered_rule_info.consequence.subconsequence.action

| Type | INTEGER | Mode | NULLABLE |
|-------------|--|------|----------|
| Description | Action taken for the subconsequence. See consequence action for an explanation of possible values. | | |

message_info.triggered_rule_info.consequence.subconsequence.reason

| Type | STRING | Mode | NULLABLE |
|-------------|--|------|----------|
| Description | Reason the subconsequence was applied. Usually contains the unique description of a rule that triggered the consequence. | | |

message_info.triggered_rule_info.policy_holder_address

| Type | STRING | Mode | NULLABLE |
|-------------|---|------|----------|
| Description | Email address of the policyholder whose policy triggered the rules. | | |

message_info.triggered_rule_info.rule_name

| Type | STRING | Mode | NULLABLE |
|-------------|---|------|----------|
| Description | Custom rule description given by an administrator in the Admin Console. | | |

message_info.triggered_rule_info.rule_type

| Type | INTEGER | Mode | NULLABLE |
|-------------|---|--|----------|
| Description | Custom rule type, for example, inbound gateway, content compliance. | | |
| | Value | Description | |
| | 0 | Walled garden. | |
| | 7 | Objectionable content. | |
| | 8 | Content compliance. | |
| | 10 | Received mail routing. | |
| | 11 | Sent mail routing. | |
| | 12 | Spam override. | |
| | 14 | Blocked senders. | |
| | 15 | Append footer. | |
| | 16 | Attachment compliance. | |
| | 17 | TLS compliance. | |
| | 18 | Domain default routing. | |
| | 19 | Inbound email journal acceptance in Vault. | |
| | 20 | Outbound relay. | |
| | 21 | Quarantine summary. | |
| | 22 | Alternate secure route. | |
| 23 | Alias table. | | |
| 24 | Comprehensive mail storage. | | |

| | |
|--|--|
| | 25 Routing rule. 26 Inbound gateway. 27 S/MIME. 28 Third-party email archiving. |
|--|--|

message_info.triggered_rule_info.spam_label_modifier

| Type | INTEGER | Mode | NULLABLE | | | | | | | | |
|-------------|---|---|----------|-------|-------------|---|---|---|---|---|---|
| Description | Describes the custom rule spam classification verdict. | | | | | | | | | | |
| | <table><tr><th>Value</th><th>Description</th></tr><tr><td>0</td><td>No action – the rule honored the Gmail spam classification verdict.</td></tr><tr><td>1</td><td>Spam – the rule classified the message as spam.</td></tr><tr><td>2</td><td>Not spam – the rule classified the message as not spam.</td></tr></table> | | | Value | Description | 0 | No action – the rule honored the Gmail spam classification verdict. | 1 | Spam – the rule classified the message as spam. | 2 | Not spam – the rule classified the message as not spam. |
| | Value | Description | | | | | | | | | |
| | 0 | No action – the rule honored the Gmail spam classification verdict. | | | | | | | | | |
| | 1 | Spam – the rule classified the message as spam. | | | | | | | | | |
| 2 | Not spam – the rule classified the message as not spam. | | | | | | | | | | |

message_info.triggered_rule_info.string_match

| Type | RECORD | Mode | REPEATED |
|-------------|---|------|----------|
| Description | If the rule was triggered because of string match; for example, content compliance rule, which contains the information about the string matches. | | |

message_info.triggered_rule_info.string_match.attachment_name

| Type | STRING | Mode | NULLABLE |
|-------------|--|------|----------|
| Description | Name of the attachment where a matching string was found if in the text extracted from a binary file. Note: this field is currently not populated. | | |

message_info.triggered_rule_info.string_match.match_expression

| Type | STRING | Mode | NULLABLE |
|-------------|--|------|----------|
| Description | Match expression that an administrator set in the Admin Console. | | |

message_info.triggered_rule_info.string_match.matched_string

| Type | STRING | Mode | NULLABLE |
|-------------|---|------|----------|
| Description | String that caused the rule to trigger. Sensitive information is hidden by "*" or "." | | |

message_info.triggered_rule_info.string_match.predefined_detector_name

| Type | STRING | Mode | NULLABLE |
|-------------|---|------|----------|
| Description | If this was a match of predefined detectors, shows the name of the predefined detector. | | |

message_info.triggered_rule_info.string_match.source

| Type | INTEGER | Mode | NULLABLE |
|-------------|--|--|----------|
| Description | Location of the string matched in the message. | | |
| | Value | Description | |
| | 0 | Unknown. | |
| | 1 | Message body, including text format attachments. | |
| | 2 | Binary format attachments. | |
| | 3 | Message headers. | |
| | 4 | Subject. | |
| | 5 | Sender header. | |
| | 6 | Recipient header. | |

message_info.triggered_rule_info.string_match.type

| Type | INTEGER | Mode | NULLABLE |
|-------------|----------------|----------------------------|----------|
| Description | Type of match. | | |
| | Value | Description | |
| | 0 | Undefined. | |
| | 1 | Regular expression match. | |
| | 2 | Predefined detector match. | |
| | 3 | Simple content match. | |
| | 4 | Non-ASCII match. | |

message_info.upload_error_category

| Type | INTEGER | Mode | NULLABLE |
|-------------|---|--|----------|
| Description | Error encountered while uploading the message to the destination. | | |
| | | | |
| | Value | Description | |
| | 0 | Uncategorized transient error. | |
| | 1 | Recipient account is too busy. | |
| | 2 | DNS error resolving recipient domain. | |
| | 3 | Recipient's server refused connection. | |
| 4 | Recipient is out of storage quota. | | |
