Best Practices For Kids & Family Content

A guide to creating enriching, engaging, and inspiring content for kids and families.
At YouTube, we believe kids can discover new interests, learn about the world, and foster a sense of belonging when they explore the world through online video. That's why we've collaborated with child development specialists to develop a set of quality principles to help guide YouTube's kids and family creator ecosystem.

In this resource, we'll explore the details of each principle. Our hope is that sharing the ins & outs of the Do's & Don'ts will make it easier for you to create enriching, engaging, and inspiring videos for kids and families. (You can learn even more on this topic by exploring our Creating For YouTube Kids Field Guide.)

We're committed to helping kids and families discover high quality content by raising it in recommendations on our platforms, and we'll continue to reevaluate and update these principles as needed.
Table of Contents

1. Start with **why**
2. What are YouTube’s **high quality** principles?
3. What are YouTube’s **low quality** principles?

**IMPORTANT NOTE:**
The list of principles in this guide is meant to give you a better idea of what may be considered high- or low-quality content, and is not exhaustive. These principles also supplement our [Community Guidelines](#), which help provide a safe viewing experience for everyone. You’re still responsible for following our Community Guidelines on all content you create.

Additionally, although the tips in this field guide are designed to help you create content aligned with our quality principles, they do not guarantee that your content will appear in YouTube Kids.
1. Start With **WHY**

*Remember: Though this resource supplies the *HOW* for making quality kids & family content, there’s another question that’s just as important... and one whose answer must come from you: *WHY* are you making this content?*

What value do you hope your content will give audiences?

Will it make learning math fun? Empower young viewers to walk into the big, wide world with compassion and confidence? Provide hilarious, wholesome experiences the whole family can enjoy?

There are no wrong answers, of course. But with the truly awesome impact quality kids & family content can have, and the effort that goes into creating it, it’s vital that you, as creators, know what takeaways you intend to impress upon your audience.
2. What are YouTube’s high quality principles?
To align with YouTube’s high quality principles, content should promote one or more of the principles below.

- Being a good person
- Learning and inspiring curiosity
- Creativity, play, and a sense of imagination
- Interaction with real world issues
- Diversity, equity, and inclusion
1. Promotes **being a good person**

As a Harvard Graduate School of Education study* on values suggested, children need strong moral role models. By showcasing traits such as honesty, fairness, empathy, kindness, and caring for the common good, quality content can inspire young viewers and leave a lasting impact.

**Being a good person doesn’t mean being a perfect person, of course, but it’s important that content model positive behaviors.**

Kids look up to the hosts and heroes of their favorite content, and by modeling behaviors such as respect, helping, being a good friend, and having healthy habits (to name just a few!), you can help young viewers learn, grow, and be inspired to adopt those behaviors as their own.

* "The Children We Mean to Raise: The Real Messages Adults Are Sending About Values"
2. Inspires learning and curiosity

Spark children’s natural curiosity, wonder, and enthusiasm for understanding the world.

Your content may or may not deal with academic topics or be educational in the traditional sense, but no matter what, young viewers are going to learn something from it. So ask yourself early and often:

“What do I want viewers to take away from my show?”

It’s important for kids to enjoy the process of learning. Quality content can encourage this learning by leaning in to the methods below.

- **Inspire your audience** to take the learning into their own hands with activities like DIY science experiments and nature scavenger hunts.
- **Invite audience participation.** Try sing-alongs, call-and-response chants, and asking questions.
- **Incorporate tools** such as mnemonics, rhymes, repetition, alliterations, and acronyms.

Additionally, tailor your content so young minds can easily understand and absorb it. This can help you figure out which words to choose, how high to count, and how many steps to include in directions.
Creativity, play, and a sense of imagination

Create videos that are thought-provoking, interactive, and/or invite the use of imagination.

While artistic expression is wonderful and vital, it’s not the only thing that content exploring creativity can offer. Content of this type also teaches viewers about thinking flexibly, solving problems with unique solutions, and seeing new possibilities for their world and themselves.

Content can foster these abilities in ways ranging from teaching soccer tricks, to building imaginary worlds, to creating arts and crafts. Above all, it’s about encouraging kids to create, make, or engage with something in a meaningful and novel way.
4. Interaction with real world issues

Help young viewers prepare for experiences they face as part of growing up.

Each stage of a child’s development introduces new social and emotional experiences. Quality content helps kids and families navigate the issues and challenges these stages bring.

Crafting videos that resonate begins with understanding your viewers’ specific concerns and developmental stage. For instance, content for very young children, who have limited life experience and frames of reference, may focus on issues in their immediate environment, such as learning to share their toys. Content for older children, meanwhile, could focus on issues such as getting good grades or the transition to middle school.

It’s also important to help viewers understand that making mistakes along the way is a normal and welcome part of life. Characters should have stumbles and triumphs, interests and quirks, and hopes and fears that make them real and inspire viewers to grow alongside them.

While quality content aligned with this principle comes in countless styles, there is a common thread: presenting relevant issues in a way that feels authentic, compelling, and relatable to your particular audience.
5. Diversity, equity, and inclusion

Create content that reflects diversity, encourages equity, and shares the value of inclusion.

Kids and families come to your videos with an array of backgrounds, cultures, resources, and abilities. Quality content recognizes and reflects this, and makes all viewers feel included and welcomed.

Casting is among the ways content can send powerful, positive messages to kids and families. For instance, content featuring a roughly 50/50 split of boys and girls helps champion gender equality.

Remember that representation alone is insufficient, though: All characters, including those with diverse backgrounds and abilities, should be unique and multidimensional. Otherwise, content runs the risk of tokenism or stereotypes that can inadvertently perpetuate damaging attitudes.
3. What are YouTube’s low quality principles?
Creating content for kids is a gift, but also an extraordinary responsibility. We know that the vast majority of our Creators understand this and act in good faith. Regardless of intent, however, these low quality characteristics must always be avoided.

- Heavily commercial or promotional
- Encouraging negative behaviors or attitudes
- Deceptively educational
- Hinders comprehension
- Sensational or misleading
- Strange use of children’s characters
1. Heavily commercial or promotional

Avoid focusing on promoting brands and logos, or featuring excessive consumerism.

Although toys and other consumer goods can have a place in high-quality content, videos will be considered low quality if they do not provide new perspectives, experiences, or educational elements.

Often, it is a video’s focus that distinguishes between high- and low-quality content. Take the fictional Megatruckz toy brand as an example.

While a video that focuses on creative play and imagination with the Megatruckz toys may align with our high quality principles, and a sponsored video for Megatruckz may be appropriate when the required disclosures are made, a video that focuses excessively on the product or on accumulating or purchasing multiple Megatruckz products would be unacceptable under these principles.

Note: This quality distinction is separate from whether a brand has paid or otherwise incentivized you to feature their product or service. Paid and sponsored content can be high quality, but it's still subject to these same considerations and must always adhere to the guidelines and requirements outlined here.
Encourage only positive, prosocial behavior and attitudes.

As the American Psychological Association has stated, “While ... media can provide education and entertainment, [it] can also damage children.”

Negative behaviors or attitudes may range from unhealthy eating habits, to disrespecting or lying to parents, to performing dangerous stunts, to doing hurtful pranks.

When evaluating whether content may be considered low quality under this principle, keep in mind the importance of nuance and context. For instance, a video featuring a character who bullies others would not be considered low quality for merely including this character. (In fact, since bullying is an unfortunate reality for many, the inclusion could be instructive.) However, if the video celebrated or aggrandized the bully, that could be considered low quality.
3. Deceptively educational

Don’t mislead potential audiences about the educational value of your content.

For content to have the potential to make a real learning impact, it must include meaningful guidance, clear explanations, and be specifically tailored to its specific audience’s cognitive abilities to understand and retain the subject matter.

Deceptively educational videos lack these qualities. While their titles and thumbnails may promise to help viewers “learn colors” or “learn numbers,” the content itself can often be characterized by mindless repetition paired with transfixing imagery. They also may contain inaccurate information.

Note: Thumbnails and titles created for illustrative purposes only.
4. Hindering comprehension

Ensure that your content is cohesive and comprehensible.

Content that falls under this principle feels generally nonsensical. This issue can arise from both creative and technical shortcomings.

Creatively, videos may lack cohesive narratives, be seemingly random, generally feel they “have no point,” or have been made without consideration of their audience’s cognitive development.

Technical faults that hinder comprehension include poor audio and visuals. These shortcomings are sometimes the result of the mass production or auto-generation used to create such content.
5. Sensational or misleading

Don’t try to shock or deceive kids and families for views.

In some ways akin to “clickbait,” this category of content is hyperbolic, bizarre, and deceptive.

While we encourage the use of compelling titles and thumbnails, they should not be upsetting, overly exaggerated, or misrepresentative of what’s actually in a video. Likewise avoid “keyword stuffing,” or using keywords popular with children in a repetitive or nonsensical way (e.g., Mickey Mouse Paw Patrol
Bluey Pokémon Dance Party WOW!)

Content should also never mislead young audiences on the veracity of its information, such as presenting things as facts if they are untrue or purely opinion-based.

Note: Please refer to the Misleading metadata and Misleading thumbnail policies in YouTube’s Community Guidelines.
6. Strange use of children’s characters

Never depict children’s characters in objectionable situations.

Whether animated or live action, this content places children’s characters in fundamentally inappropriate scenarios that can confuse and upset viewers.

Such scenarios can include (but aren’t limited to) those that are violent, lewd, sexual, repulsive, or otherwise objectionable. This content may also be in violation of our Community Guidelines and can be removed with a strike penalty.

Note: Thumbnails and titles created for illustrative purposes only.
Thank you!

YouTube is committed to raising high-quality kids and family content in our recommendations. We look to each of you to help create that enriching and inspiring content for kids and families on YouTube.

Thank you as always for all the incredible work you do. **We can't wait to see what you create next!**
