

SX Virtual Labs

Simplify your training delivery

What is a Virtual Lab?

A virtual lab is a cloud-based service that allows the students to connect from anywhere in the world to preconfigured training environment.

Advantages Over Physical Environments

A virtual lab reduces costs by eliminating the travel expenses, IT resources and laboratory maintenance necessary for classroom lessons.

Virtual labs are more convenient for both students and instructors as no time is required for setting up or travelling. Courses can even be attended from different time zones.

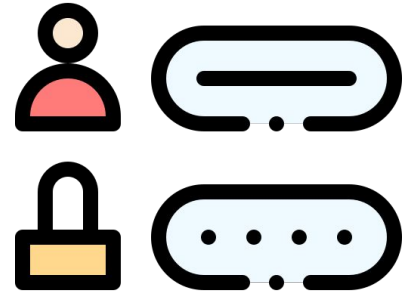

Preconfigured setup ensures smooth technical performance helping to maximise time spend on productive learning and reducing frustration caused by malfunctioning equipment.

How easy is it to use?

Requirements:

- A desktop or a laptop computer
- Stable broadband connection
- Modern web browser such as Google Chrome

Once you receive the username and password, simply login to your virtual lab using your details.
