What you can expect

Drive with us the digital transformation of BASF in Project 4.0 and implement the future processes and ways of working with our data. Digital solutions, processes and services will play an essential role in our future business. They will be driven by organizational elements such as interdisciplinary teams and agile collaboration. As a Data Infrastructure Manager (m/f) in Ressort I you will translate stewardship requirements into specifications for IT solutions, evaluate technical solutions from external providers and take over project management of implementation projects.

- o In the field of data wrangling and data quality you will create a network with startups and other vendors.
- o You will use your programming and statistic knowledge to either create new tools or to steer external service providers for tool design.
- o You will define the IT architecture of Data-to-Value infrastructure such as components of the enterprise data, e.g. data catalog and implement APIs.
- o You will define how to onboard and connect legacy systems to the new architecture and also interact with other execution elements such as the data integration layer team.
- o You will be working as a product owner and prioritize the backlog of a DevOps team in data onboarding.

What we expect

- o You hold a degree in Computer Science or Natural Sciences.
- o In previous positions, you gained work experience in IT and applied your programming skills.
- o You are experienced in ETL processes and have good knowledge in data management.
- o Acting with entrepreneurial drive and fostering the spirit of innovation, you have a
