

USE OF THESE GUIDELINES WILL ENSURE THAT TAKEFORM PROVIDES THE BEST POSSIBLE PRODUCT FOR YOU OR YOUR CLIENT. ALL ARTWORK WILL BE REVIEWED BY OUR DESIGN TEAM, IMAGING DEPARTMENT AND QUALITY CONTROL FOR OPTIMUM QUALITY.

Artwork Quality | Right to Use

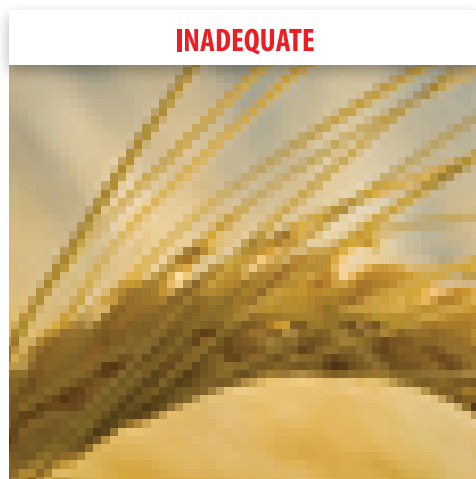

Typically, web images from a standard search engine (i.e Google, Yahoo, Bing) are of poor quality for printing purposes and are more than likely not legal to reproduce. Takeform recommends using stock photography and/or your own artwork to ensure legal protection and an expert quality product.

Takeform subscribes exclusively to **Shutterstock.com** & **iStock.com**. Simply supply your Takeform contact with an image ID number and the design team will do the rest –we’ve got you covered; no extra steps and no large-format file sharing. Unless of course, you have your own artwork; photographic files must have a minimum resolution of 300 dpi (dots per inch) and be at least one quarter (25%) of the desired final print size. Any photographs with a lower resolution than 300 dpi will look pixelated and/or blurry when reproduced.

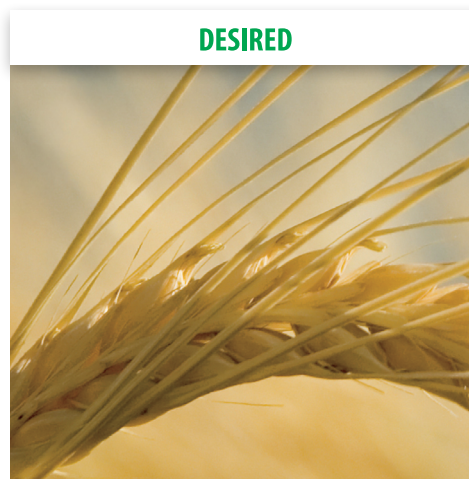

Files & Formats

When exporting your artwork, please be sure to **outline all of your fonts**, **embed imagery** and **include all respective color matching** requests. Please be sure file has been exported to one of the following formats: (.pdf) (.eps) (.ai) (.psd) (.jpg) or (.tif).

Examples

This image is only 72dpi (typical of web graphics). When enlarged, each pixel becomes more apparent; thus resulting in an undesirable “pixelated” image.

This image is 300dpi; with more than 4 times the amount of pixels as the image to the left, upon enlargement, no pixelation occurs.
