Transit

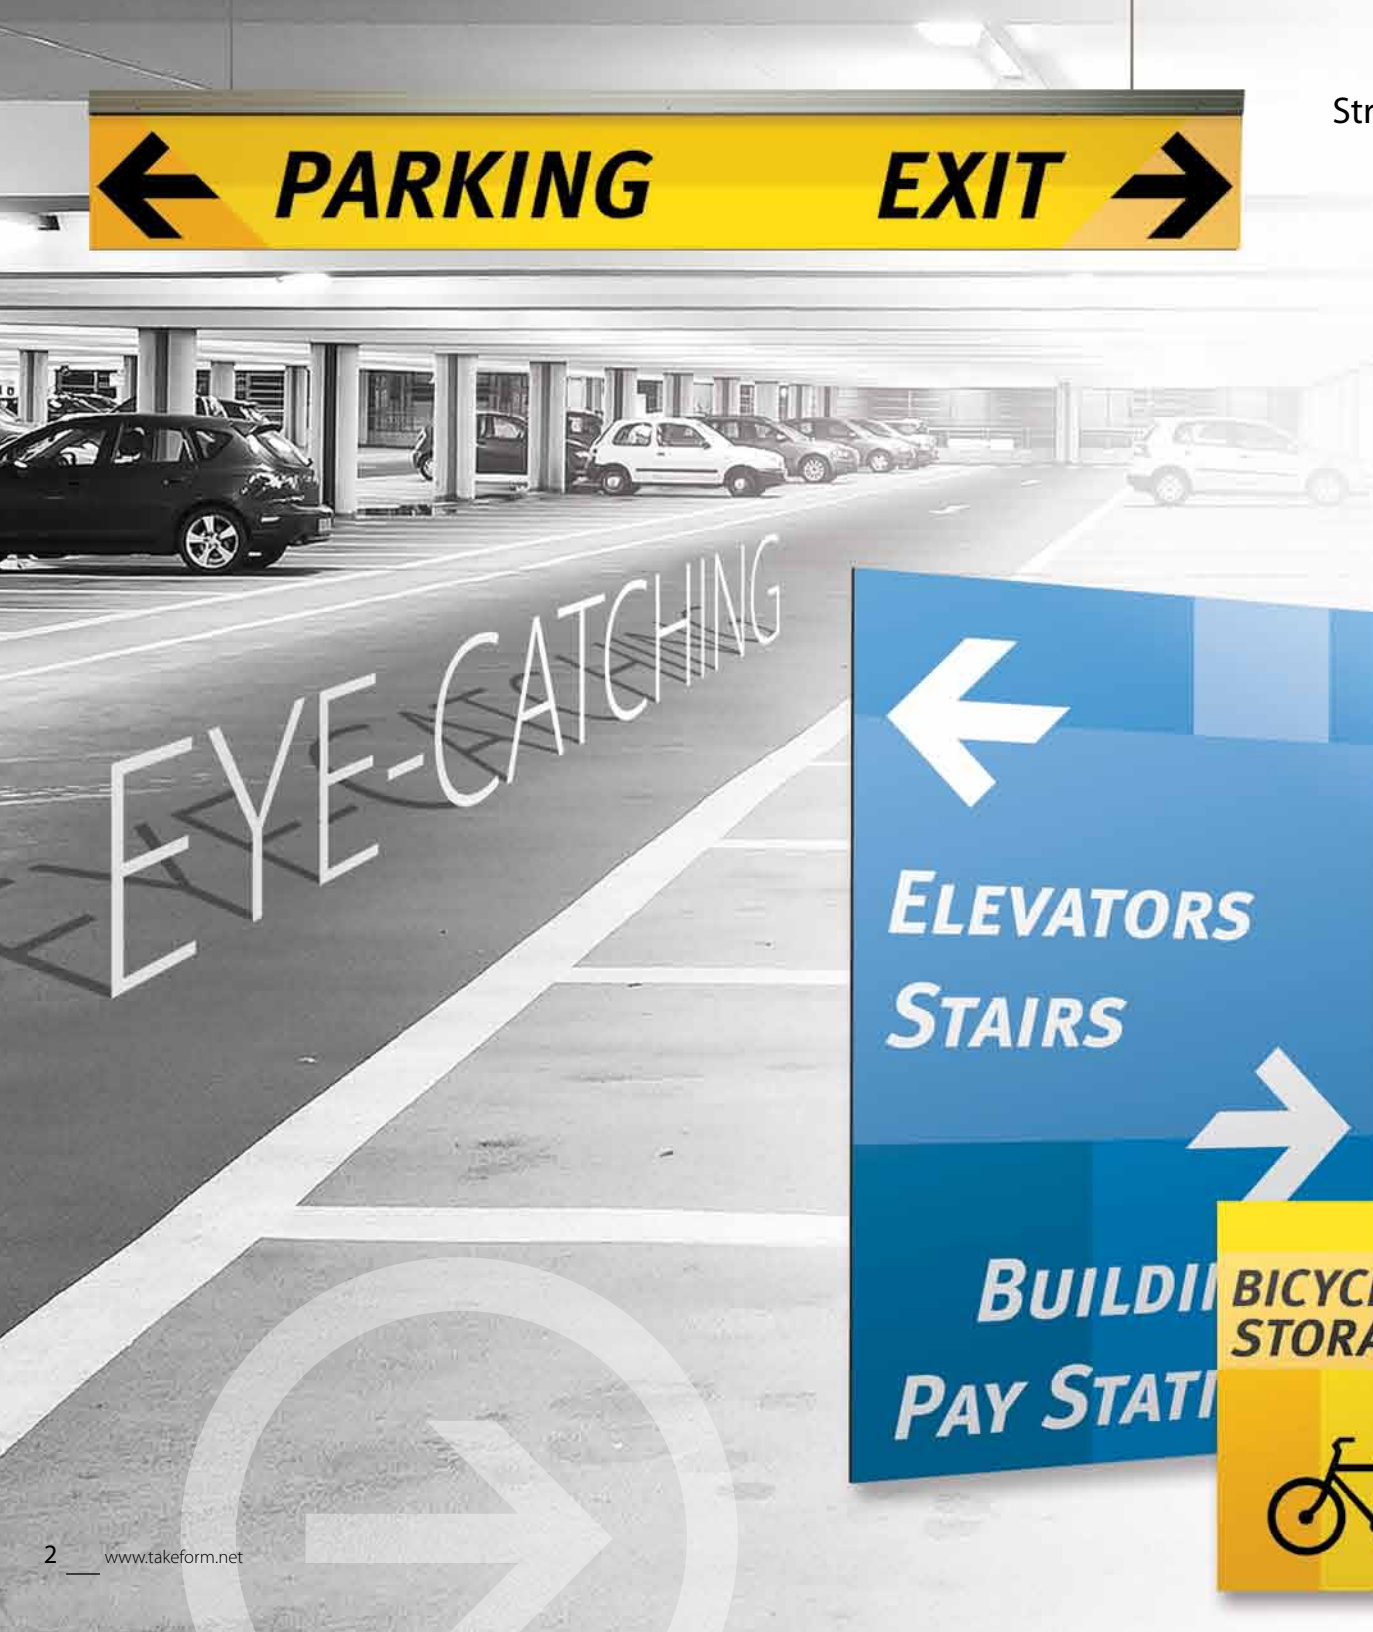

Parking Garage Signage

Transit. For your other front door.

A vehicle pulls up. A window rolls down. Another guest has arrived at your entrance for the first time. Not the warm, welcoming lobby that greets people stepping in from the street. This is the parking garage where thousands first encounter your facility each year. What's their impression as the gate rises, they curve around the ramp and emerge from their car to find their way?

Striking enough to stop traffic.

Arriving guests deserve a clear, vibrant welcome around every corner. Transit helps your brand shine in a space that's typically cold and dark. Because—from the time they arrive to the moment they leave—your guests deserve no less.

Effective enough to keep it moving.

Created specifically for the parking garage environment, Transit is a complete sign system that's as attractive as it is rugged—ideal for the twists and turns of a high-traffic facility. Designed with bold color palettes that correspond to the levels of your garage, Transit provides every sign type required, including bang bars, overheads, flags, and wall mounts.

Distinctive design.
Durable construction.

Reliably flat, rigid sign face.
Transit is unaffected by fluctuations in temperature and humidity. It's manufactured from aluminum composite material (ACM) with a 6 mil thickness.

Long-lasting direct-print process.
We print directly to ACM, adding a 3 mil protective overlay that assures no degradation of face or image

Extruded frame.
Keeps signage hanging straight and strong with a custom extrusion of clear anodized aluminum alloy 6005A that assures no sign deflection or sagging over widths up to 96".

Resilient break-away posts.
Signs rotate up and out of the way if contacted by an oncoming vehicle, returning cleanly to vertical position.

Rust-resistant mounting hardware.
Constructed of non-corroding aluminum and stainless steel.

Structural integrity.
All hardware and support mechanisms have a minimum 4:1 safety factor with respect to load and pull-out strength.

Protective end caps.
Aluminum frames are equipped with end caps to prevent intrusion of water and debris.

Connect visitors to your brand. Right from level 1.

Transit adds brightness and clarity to your parking garage, and comes in 24 traffic-stopping looks designed to keep cars and pedestrians moving smoothly. Choose from predesigned sign families—each with distinctive visual cues that eliminate those “Where’d I park?” worries.

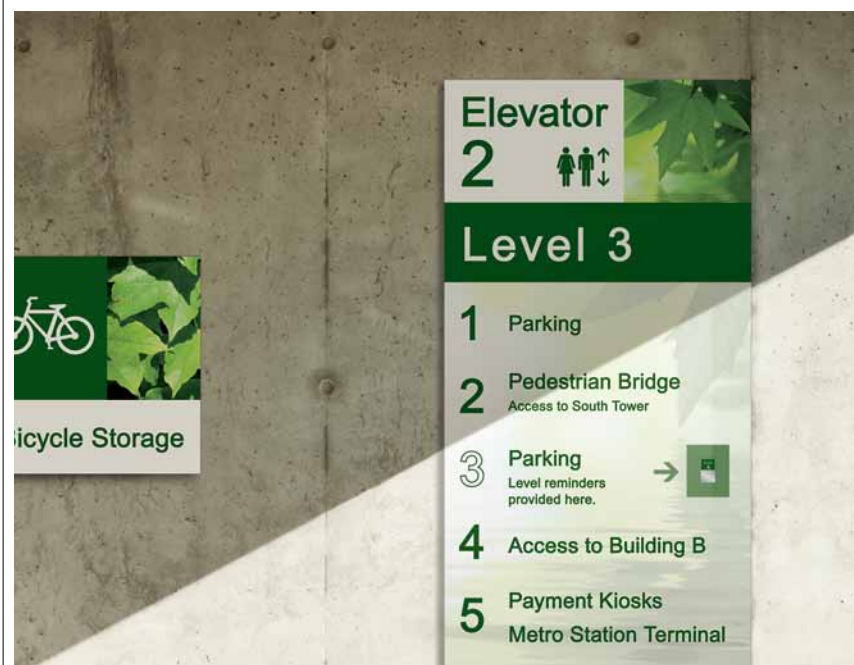

Transit

Your brand moves people. Your garage should, too.
