

TTT TELEGRAM (TUE APR 19TH 2022)

Here at TTT we have been working hard to see our missions and values succeed. Whilst we have not been shouting about it a lot of progress and developments have been taking place and more is on the way.

In past months many of the regions we operate from have experienced severe financial shock and business interruption from Covid (Worldwide) to uprisings (Kazakhstan) and outright war (Ukraine). There is no doubt these events have slowed progress, but they have not extinguished our fire and determination to succeed.

This is why we are pleased to announce the TTT Telegram, a program of regular updates to keep you in touch with the amazing things we are doing.

In coming weeks, we will provide regular articles exploring developments in specific regions or with particular technologies.

As a taster we can tell you that forthcoming editions will cover;

- The Micro Mobile Cyclone Gas Generator (MMCGG) – a smaller and more portable version of the existing MCGG
- Progress in India as it opens up after Covid
- Worldwide Training with award winning programs
- Engagement with the state of Hawaii promising rapid expansion
- Planned installations of the MCGG
- A roll out of thousands of MMCGG units

There is so much more to add to the progress we are making so keep an eye out for the Tesla Telegram and future updates.

Together we rise.
