

NOW TESTING FOR METALS AND SURGICAL IMPLANT ALLERGIES

10-15%
of the
world's
population
is allergic
to one or
more
metals.

**COMMON METAL
& SURGICAL
ALLERGENS**

- Cobalt
- Titanium Alloys
- Nickel
- Ceramics
- Polymers
- Plastics
- Adhesives
- Topical Antibiotics

The Allergy Associates Team is proud to introduce our newest, and most comprehensive patch testing method. This new system has been specifically designed for patients with suspected metal, plastic, or topical antibiotic allergies. This panel not only includes commonly used metals and plastics, but other elements that may make up alloys, topical antibiotics and resins. This method allows our allergists to work with your practice to determine which of our 54 common implant allergens a patients should be tested for.
