

HOPECARE

HEALTH IS A JOURNEY, NOT A DESTINATION

Are you looking for solutions for your health concerns that won't involve a laundry list of medications or invasive surgeries, but have given up hope in trying to ?

Are you motivated to take an active role in your health?

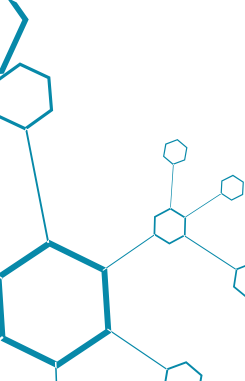

If you answered yes to those questions, then we have great news for you!

LT360 Health Center is proud to announce we are now accepting existing patients into our innovative HOPECARE program:

WHAT IS HOPECARE?

Standing for Holistically Optimized Point of Entry Care, HOPECARE is our answer to an outdated and ineffective primary care system. HOPECARE uses extensive exploratory diagnostics to focus on disease prevention and reducing, or eliminating, medications. We help you accomplish this through the use of natural protocols and recommending lifestyle changes that result in all around better health and an improved quality of life. This approach focuses on your body as a whole, and not just spot-treating symptoms. You will be working with our providers, including credentialed medical professionals, meaning that not only are you receiving the best quality of care possible, but services are also covered by most insurances and HSA benefits.

REQUIREMENTS FOR ADMISSION INTO THE PROGRAM

- Must receive annual Exploratory Blood Panels (not covered by any insurance but are HSA eligible)
 - Must be motivated to take action and follow all recommendations
 - All pre-existing health conditions must still be “in range” for reversal
 - Must understand that this program is designed for disease reversal, NOT medication management
- 
-
