

Pediatric Ophthalmology of Erie, Inc.
HOTV Instruction Sheet

HOTV is another test used to evaluate your child's visual acuity. Because it is based on matching symbols, young children quickly learn it. Before your next visit, work with your child on recognition of these letters. Your cooperation will help immensely in determining the vision of your child. Cut out the bottom letters along the lines and use these as flashcards. Your child should be able to recognize and point to the matching letters below. Once they are comfortable doing that, alternate covering one eye at a time.
