Capital Area Pediatrics – Beyfortus (RSV) Vaccine Service Authorization

Capital Area Pediatrics remains committed to providing excellent care to our patients and ensuring that our patients and their families remain safe and healthy. We are providing the information below because your child is scheduled to receive the Beyfortus RSV vaccine

Beyfortus (nirsevimab). Your child will receive Beyfortus to help protect against severe respiratory syncytial virus (RSV) disease during the upcoming RSV season.

Second-season Beyfortus is recommended only for children under 19 months of age who meet specific high-risk criteria for severe RSV disease. The recommended dose for these children is 200 mg, given as two 100 mg injections at the same visit.

While many insurance plans are expected to cover the cost of the vaccines and its administration, each plan is different and there is no guarantee that your insurance plan will provide payment.

As a courtesy, Capital Area Pediatrics will submit the claims to your insurance with all appropriate diagnosis codes. However, it is your responsibility to pay for any charges that your insurance denies or applies to cost sharing (copayments, deductibles, or coinsurance).

VFC-eligible patients will receive vaccines through the Virginia Vaccines for Children Program; however, a \$21.00 administration fee will apply to each vaccine.

Today's Visit	Immunization	CPT	Vaccine Fee	Administration Fee	Total
	Beyfortus (RSV, Monoclonal 2.0ml)	90381 x 2	\$1548.00	\$47.00 (96380)	\$1595.00
<i>A 20% discount may be applied to the total amount if paid in full at the time of service.</i>					

I have read and understand the above information. I agree to be responsible for any charges not covered by my insurance.
