

## **Protect Your Crew. Get Vaccinated Against Two!**

Capital Area Pediatrics will be offering the seasonal influenza (flu) vaccine and the updated COVID vaccine starting in early September!

We will be offering the flu vaccine and COVID vaccine for all existing patients over 6 months of age. Getting vaccinated before October 31 is an ideal target, but vaccination anytime during the fall/ winter season is also appropriate!

*If your child has a scheduled well visit or follow up visit before November 1, your child and up to 2 additional family members will be offered flu and/ or COVID vaccination at that visit.* Additional family members must have completed their registration 24 hours in advance of the well visit. Please do not use a vaccine only clinic appointment that could be used by another family.

We will be scheduling vaccine only clinics for up to 5 family members at all sites on a variety of dates and times. Preregistration for all family members **MUST** be completed at least 24 hours in advance of the visit.

We will continue to add more clinics as supply, demand, and staffing allows. If you do not find something immediately, please check back periodically as we will continue to add more vaccine only clinics. Our ability to vaccinate will always be based on shipment and supply, which is often out of our control.

**Please check back on the website and keep your eye out for an email campaign when we are ready to self-schedule flu and COVID vaccine clinic visits!**

**Please do NOT call the office to ask about availability or to schedule the flu vaccine or COVID vaccines. We need our phone lines open for urgent concerns.**
