

Protect Your Crew. Get Vaccinated Against Flu!

Capital Area Pediatrics is now offering flu vaccine in all offices. *COVID vaccine is not yet available - we will re-post when it is!*

We will be offering the flu vaccine and COVID vaccine for all existing patients over 6 months of age. Getting vaccinated before October 31 is an ideal target, but vaccination anytime during the fall/ winter season is also appropriate!

If your child has a scheduled well visit or follow up visit before November 1, your child and up to 2 additional family members will be offered flu and/ or COVID vaccination at that visit. Additional family members must have completed their registration 24 hours in advance of the well visit. Please do not use a vaccine only clinic appointment that could be used by another family.

We will be scheduling vaccine only clinics for up to 5 family members at all sites on a variety of dates and times. Preregistration for all family members **MUST** be completed at least 24 hours in advance of the visit.

Please self-schedule for a vaccine only clinic [here](#). Please change location if your primary site does not have a date and time that is convenient for you. We will continue to add more clinics as supply, demand, and staffing allows. If you do not find something immediately, please check back periodically as we will continue to add more vaccine only clinics. Our ability to vaccinate will always be based on shipment and supply, which is often out of our control.

Please do NOT call the office to ask about COVID vaccine availability or schedule flu vaccine. We need our phone lines open for urgent concerns.

What you see on the self-schedule calendar is what is available at that moment!
