Innovation goes
Portable

Artemide portable collection share the
technological core while interpreting
light's freedom with different
performances and materials.
The portable collection is dedicated to
different situations and it allows new
possibilities to create light scenarios in
all the private or public realms.

Bontà

Davide Oldani & Attila Veress
↳ 2020

A portable lamp explores the connection between light, food and conviviality.

It's a portable lamp that interacts with objects on the table.

A body made from white textured milk glass, diffuses the light, creating a relaxed atmosphere, while the upper recess is home to a glass bowl designed to hold food for sharing.

This can be combined or alternated with a taller bowl and wider one – almost a plate – at the top.

The bowls – and the lamp itself – are made from hand-worked glass, making them unique pieces whose texture, transparency and colour generate a special dialogue between light and food, blurring the boundaries between them.

Maximum attention to detail has been shown in order to do justice to the object itself and the other elements with which it interacts.

Light plays a key role in creating the perfect atmosphere, interacting with other elements on the table and promoting sharing and conviviality

"Simplicity is at the heart of my philosophy when it comes to setting a table. This lamp is not a decorative element. Instead, it reveals its multiple functions through use: it creates an atmosphere, supports and enhances food and can be combined with various types of plates."

Davide Oldani

↗ Venetian Blown Glass

The special processing of Bontà glass, handmade in the Artemide glassworks, makes each lamp a unique piece.

It is the result of a reinterpretation of the traditional Venetian "balloton" technique. With a double processing, small square-based pyramids are first impressed into the hot glass and in a second phase the final shape is given to the piece.

Hand blowing transforms the three-dimensional pattern into a texture of different transparencies that, thanks to the light, comes to life.

↗ Variety

→ 1 Wooden base

→ 1 White Light diffuser
  ○ White

→ 2 Plates sizes
  ○ Bowl - Ø 18cm   ○ Plates - Ø 26cm

→ 4 Plates colours

Gople Portable

BIG - Bjarke Ingles Group
↳ 2020

The Gople family keeps growing, with new versions dedicated to different lighting design languages.

It also becomes a portable lamp that offers an impressive 32-hours of running time without mains electricity. Thus, everyone can be the architect of light in their own space, wherever it may be.

Gople's characteristic diffuser is made of plastic in order to withstand use across a wide spectrum of spaces and situations.

Every element is designed to guarantee excellent light quality with high efficiency and low energy consumption. Long running times unplugged go hand-in-hand with rapid recharging times.

The soft, diffused light emission can be adjusted to 3 different brightness settings to create different ambiances.

It is perfect for everyday lighting scenarios in personal spaces, but also for more social moments.
↗ Gople portable

Minimalist and simple in its elegant shape, it becomes an ideal, flexible element for lighting bars and restaurants, where it enables an unconstrained vision for lighting scenarios and ambiances that can change freely in line with organisation of spaces.
Light Technology

Gople is also plug

Gople portable has no protection against contact with water but its lightweight and durable design means it can accompany us outdoors too.

Come Together

Carlotta de Bevilacqua

↪ 2018

1999 Sui: "18 portable and rechargeable LEDs. It's a revolution"
2018 Come together: "A perfect light and up to 32 hours of operation without mains power. A new 2.0 revolution."
- Carlotta de Bevilacqua

"Artemide sets light free" in 1999 with Sui. Today we can all create our own light in our space, wherever it is, with high lighting performances comparable to traditionally powered lamps, as well as long-term independence from mains power.
For optical and grabbing purposes, the profile of Come together is shaped like an instrument capable to accompany man through space.

The body is a transparent optical device with gradients to carry and distribute light: it works as an "empty" light pipe for lightness and optical intelligence.

↗ Smart Portability

Come Together is lightweight (400gr) and is shaped
to fit perfectly in hand to accompany man through
space and provide lighting on demand in any
environment, indoor or outdoor.

↗ Innovative Technology

→ High efficiency)

Curiosity

Davide Oppizzi
↳ 2019

Curiosity is a portable lamp whose shape reveals its natural vocation for showcasing, but at the same time for relations. It highlights spaces where people gather or the objects it can accommodate within the footprint of its base. Neutral and essential in its light structure, it becomes functional by enhancing the content.

It is a frame for displaying objects, with its base providing the element that accommodates whatever items you wish to display, illuminated by the small spotlight on the top.
Curiosity brings its illuminated space anywhere, and thanks to its long running time it allows you to reinvent everyday lightscapes.

It designs freedom dedicated to the individual, adapting to the domestic space, but above all it enables original new scenarios in public spaces.

Curiosity creates flexible and mobile displays, it is also a perfect tool for retail spaces, for exhibitions or for restaurants, where it creates an intimate and elegant atmosphere able to follow the changing organisation of spaces.

↗ Curiosity

Curiosity Focus concentrates a precise light beam on the base, putting the chosen object in the spotlight.
Curiosity Ambience offers a more diffused light emission, for softer mood lighting.

The 36 version is available also with a white glass sphere. Curiosity Sphere has a diffuse light that recreates a cosier and more intimate atmosphere.

"By nature, it is intended for all sectors, both private and professional: museums, the display of private collections or of objects on restaurant tables. Thanks to its battery, it is nomadic by nature and easy to move around, finding a place anywhere in any interior living space."

Davide Oppizzi

○ White

"We all have that one object that tells the story of a life, of a journey, or of a collection of objects that we would like to underline with light. Curiosity, inspired by the universe of the "cabinet of curiosities", stems from the desire to offer a small display to all those who wish to showcase an object under its light. Everyone is free to imagine their own presentation on the stage created by the lamp.
Who said curiosity is an undesirable character flaw?"

Davide Oppizzi
