Data Analytics

Increased Efficiency

Improved Revenue
Management

In-Room Dining

Restaurants
Dine-In Ordering

Here is a glimpse of the solutions we offer to the hospitality industry:

Property Management System Solution

A Property Management System (PMS) Solution is a software that is designed to help businesses and property owners handle data, client profiles, reservations, housekeeping, and other operations via a unified portal.

It includes customizable profiles, which enables guests to personalize their account details and manage membership, loyalty rewards, newsletter, and more. With a PMS solution, you automate and accelerate all the important processes at your hotel!

Point of Sale (POS) System

A Point-of-Sale system is a critical component in any hotel, and it helps hospitality businesses manage orders, menus, sitting arrangements, design a custom dashboard to display menu items in multiple languages, capture customers' signatures, managing breakfast, accept payments and other operation via a unified portal.

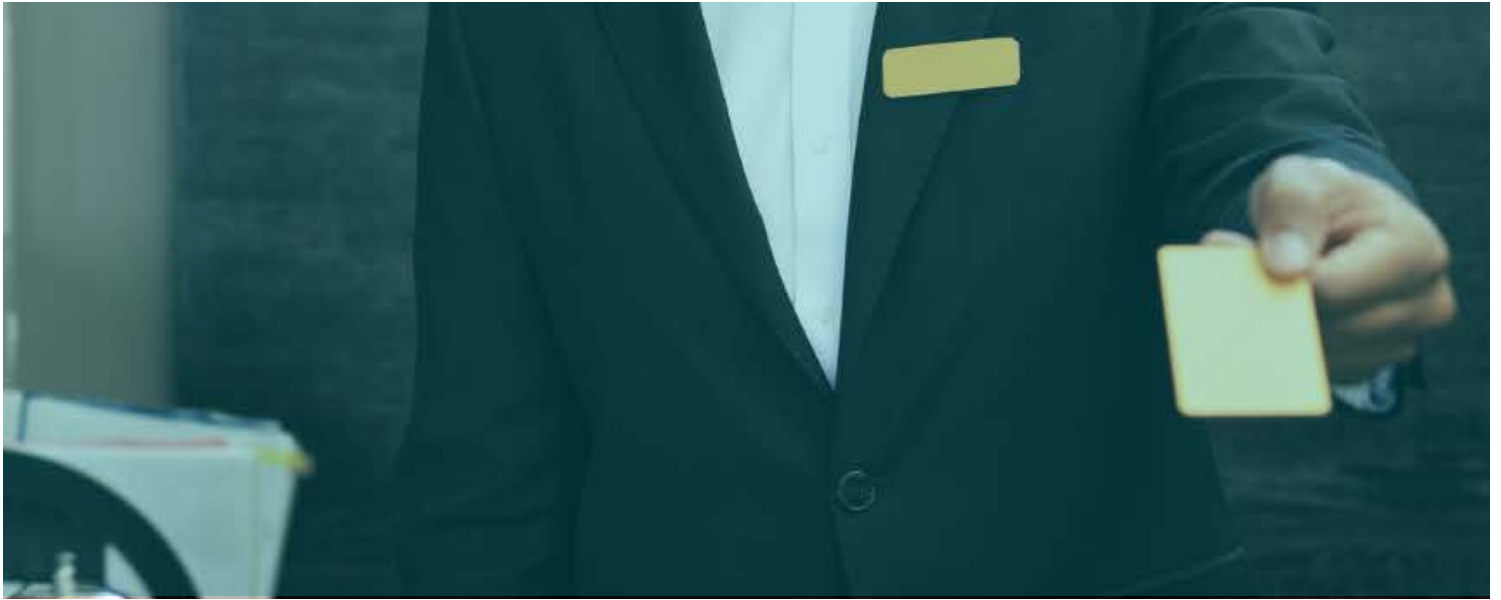

It lets administrators create and organize promotional campaigns, waiter instructions, client menus and other information from a centralized repository. Additionally, managers can gain insights into orders and sales by groups or locations via reports. It also supports integration with various hospitality related systems like PMS, reservation, revenue and more. With the right POS system, businesses can streamline their sales process, reduce errors, and improve customer satisfaction.

Digital Signage Solution

Digital signage is a centrally controlled system, a content distribution platform by which to playback digital content to one or many displays or screens in your hotel.

Digital signage screens are used for the relaying of any number of types of information such as automated check in, real time welcome information, in room services, personalized concierge service, wall arts, events, emergency notices, advertising and more.

Guests Engagement Solutions

The Guest Engagement Solution offers businesses an optimal means to interact with their guests via mobile devices, either through direct links or QR codes.

This solution not only delivers tailored experiences but also boosts customer loyalty and enhances brand recognition.

Digital Twin System

A digital twin is a virtual replica of a physical object or system, and in the context of the hospitality industry, it can be used to create a digital representation of your hotel.

By creating a digital twin of your hotel, we can simulate different scenarios and test different configurations of the property. This can help you optimize your operations, improve efficiency and enhance a more personalized guest experience.

Reservation Management System

A Reservation Management System is software that helps businesses manage their reservations, and bookings, create loyal guests, collect guest data, and streamline operations with guest experience platform.

A person with glasses is looking at a computer monitor displaying a 'Hotel Reservation Form'. The form is titled 'Hotel Reservation Form' and includes sections for 'General Questions', 'Proposed Insured's Name', 'Birth Date', 'Address', 'Phone Number', 'ID Number', 'Status', 'Occupation', 'Gender', 'Email Address', 'Social Security Number', and 'Are you a retiree?'. The form is partially filled out with handwritten information. The background shows a desk with a pen holder and some papers.

With an appointment and reservation system, businesses can reduce no-shows, improve customer satisfaction, and optimize their scheduling.

Inventory Management System

An Inventory Management System is software that helps businesses manage their inventory, including ordering, receiving, stocking, and tracking. With an inventory management system, businesses can reduce waste, optimize their inventory levels, and improve their bottom line.

ERP & Accounting Systems

ERP (Enterprise Resource Planning) Systems are software that helps you run your entire business, supporting automation and processes in finance, CRM and sales, human resources, inventory fixed asset management, project management, manufacturing, supply chain, services, procurement, and more. With an ERP system, businesses can streamline their processes, reduce errors, and improve efficiency.

An accounting system is an essential tool for businesses of all sizes. It is a software that helps companies manage their finances, including bookkeeping, invoicing, payroll, and financial reporting. With an accounting system, businesses can accurately track their expenses, income, and profits, making it easier to make informed financial decisions.

Digital Contact Center

A digital contact center is software that helps businesses manage their customer interactions across various channels, including email, chat, social media, and phone. With a digital contact center, businesses can provide prompt and effective customer service, improving customer satisfaction and loyalty.

Robotic Process Automation

Robotic Process Automation (RPA) is the process by which a software bot uses a combination of automation, computer vision, and machine learning to automate repetitive, high-volume tasks that are rule-based and trigger-driven. With RPA, you are carrying out a ton of error-free tasks, at high volume and speed and businesses can save time and resources, allowing employees to focus on more critical tasks.

Human Resources Systems

Human Resources software is a tool that helps businesses manage their employees, including recruitment, onboarding, training, performance evaluation, and more.

With HR software, businesses can streamline their HR processes, reduce paperwork, and improve employee satisfaction and retention.

Integration Platform IPaaS

An Integration Platform IPaaS (Integration Platform as a Service) is a software that helps businesses connect their different systems and applications, allowing them to work together seamlessly. With an IPaaS, businesses can automate processes, reduce errors, and improve efficiency.

In Conclusion

In today's fast-paced business world, businesses need to have the right tools and systems in place to succeed. By implementing the solutions mentioned in this booklet, businesses can optimize their operations, reduce errors, and improve their bottom line. Remember, the key to success is having the right tools in place.
