

DataProtect delivered as a Service for Microsoft 365

Cloud native, delivered as a service

Remote work accelerated cloud and SaaS application adoption, including Microsoft 365 (M365). Yet, built-in data retention features from cloud providers are largely insufficient for enterprise backup. Instead, with a one-size-fits-all policy approach, each SaaS and cloud provider offers backup features for its services but not others' services.

Enter Cohesity DataProtect delivered as a Service. It's enterprise-grade, cloud-to-cloud backup of SaaS applications. Secure your data, boost visibility and simplify multicloud protection of on-premises and cloud-native data. By consolidating and protecting workloads such as Amazon EC2, RDS and SaaS applications with a single, unified service, Cohesity DataProtect exceeds the built-in protections offered by any cloud provider.

Top benefits of Cohesity DataProtect delivered as a Service for M365

Data Security and Visibility

- Separate and isolate data for legal, compliance or ransomware protection
- Discover immutable backups that can not be accidentally or maliciously modified or deleted
- Protect data securely with encryption and flexible key management
- Gain visibility and consolidate multiple cloud data sources
- Enable exit planning if or when you need to migrate M365 data to another cloud or back on-premises

Simple and Unified Protection

- Single service for multiple cloud services, M365 and other cloud services
- Simplify and improve efficiency by making cloud-to-cloud backup match your operating model
- Extend and customize protection beyond default retentions to meet your SLAs
- Keep data for long-term retention requirements and automatically age off by policy
- Enjoy flexible capacity and/or user pricing options

Enterprise-grade Hybrid Cloud Backup

- Eliminate point products with global access to accounts, services, and multiple clouds
- Save time with a single UI for hybrid and multicloud data management
- Meet SLAs with unified policy management applied across cloud datasets
- Enjoy flexible full or granular recovery to original source or a new location
- Search and analyze your data across multiple clouds

Just sign up, connect and protect your M365 data.

1 SIGN UP: Set up your free trial of Backup as a Service

Go to www.cohesity.com/free-trial/

Enter your information

2 CONNECT: Register your source, choose your region and M365 applications

Register a new source or use an existing one

Select your M365 applications and backup region

3 PROTECT: Select your source, pick your policy and click protect

Select your M365 objects to backup

Choose your backup policy and SLA

That's it; it's that easy. Enterprise-grade backup as a service from Cohesity is now up, running and protecting your M365 data.
