

An isometric illustration of a cloud computing environment. A large, stylized white cloud with a green outline is the central element. Inside the cloud, there are several icons: a green shield with a white checkmark, a blue document with a white list, a blue speech bubble with a white lightning bolt, a yellow padlock, a yellow infinity symbol, and an orange bar chart. To the right of the cloud, there are two blue clouds and several white buildings of different heights, some with orange windows. Dotted lines connect the cloud to the buildings, suggesting data flow or network connectivity.

DMaaS, a portfolio of offerings built atop the **Cohesity Helios** platform, radically simplifies the way data is **backed up, secured, governed, and analyzed**. It provides capacity-based pricing, eliminates infrastructure and silos, and consolidates data from multiple use cases such as data backup and archiving, disaster recovery, file and object services, copy data management, and analytics - all provided through a Software as a Service (SaaS) delivery model.

Cohesity Flexibility and Choice

The right solution, for the right workloads, in the right places.

Protect Your Cloud and On-Prem Workloads

Single backup service to protect your data sources no matter where they are.

Getting Started – 30 Day Free Trial Promotion

5TB front-end capacity

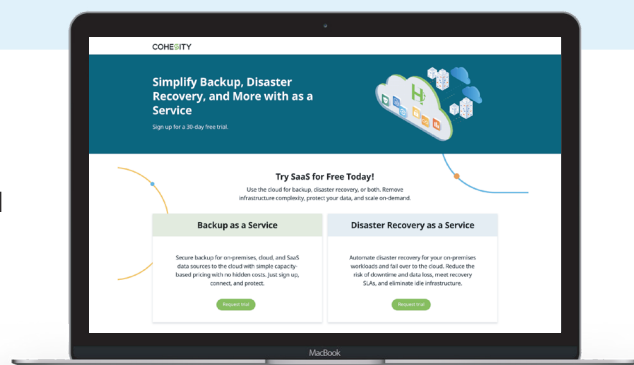

Try SaaS for Free Today! Use the cloud for backup, data isolation, disaster recovery, or all. Remove infrastructure complexity, protect your data, scale on-demand, and rapidly recover.

Backup as a Service	Data Isolation as a Service	Disaster Recovery as a Service
Secure backup for on-premises, cloud, and SaaS data sources to the cloud with simple capacity-based pricing with no hidden costs. Just sign up, connect, and protect.	Improve your cyber resiliency with an additional layer of security against ransomware. Isolate your data and recover confidently with quick, granular recovery back to any location.	Automate disaster recovery for your on-premises workloads and fail over to the cloud. Reduce the risk of downtime and data loss, meet recovery SLAs, and eliminate idle infrastructure.
