

metrics	
targetHighPrice	The most optimistic price target among surveyed analysts.
targetLowPrice	The conservative floor target among surveyed analysts.
targetMeanPrice	The mathematical average of all analyst targets.
targetMedianPrice	The median price target, which is often preferred over the mean to eliminate outliers.
currentPrice	The current market price. Comparing this directly against the targetMedianPrice allows you to calculate the percentage upside or downside.
recommendationKey	A string representing the consensus rating (e.g., "buy", "strong_buy", "hold", "underperform", "sell")
recommendationMean	A numerical score typically representing the consensus on a scale from 1.0 (Strong Buy) to 5.0 (Strong Sell).
numberOfAnalystOpinions	The total number of analysts tracking the stock.
trailingPE	Trailing and Forward Price-to-Earnings ratios, used to check historical vs. future earnings expectations.
forwardPE	Trailing and Forward Price-to-Earnings ratios, used to check historical vs. future earnings expectations.
priceToBook	Compares market value to book value, highly relevant for financial or asset-heavy industries.
pegRatio	Price/Earnings-to-Growth ratio. A PEG close to or less than 1.0 often indicates a stock is fairly valued relative to its expected growth.
ebitda	Earnings Before Interest, Taxes, Depreciation, and Amortization, displaying raw operational profitability.
revenueGrowth	Year-over-year revenue growth rate, verifying that top-line performance supports the stock's multiple.
returnOnEquity	(ROE): Measures how efficiently management generates profit from shareholders' equity.

fiftyTwoWeekHigh	Defines the macro trading range.
fiftyTwoWeekLow	Defines the macro trading range.
fiftyDayAverage	Simple Moving Averages (SMA) that expose the underlying technical trend line.
twoHundredDayAverage	Simple Moving Averages (SMA) that expose the underlying technical trend line.
beta	Measures volatility relative to the broader market (S&P 500). A beta greater than 1.0 implies higher volatility, requiring a larger margin of safety.
