2.3 Resolved Vulnerabilities

Tracking Reference	Summary	Released in Version
--------------------	---------	---------------------

CVE-2025-58754	A vulnerability was identified in Axios, a popular HTTP client for Node.js and the browser. When a "data:" URI is provided as a URL, Axios (prior to version 1.11.0) decodes the entire payload into memory, bypassing safeguards like maxContentLength and maxBodyLength. This can lead to excessive memory usage and potentially crash the process (Denial of Service), even when streaming is requested. The issue is fixed in version 1.11.0.	V3R0.102.0
