1.

When a patient arrives for an appointment, determine if:

- » The patient is pre-scheduled for a CT/NG test
- » The patient's symptoms and/or medical history warrant a CT/NG test
- » They should receive asymptomatic opt-out screening, as follows:
 - » Sexually active women under 25
 - » Sexually active women over 25 at high risk for STIs
 - » Pregnant women under 25 or at high risk for STIs
 - » MSM and males in high STI prevalence settings

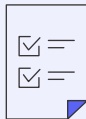

2.

If yes, provide the patient with a collection kit—vaginal swab for females or urine for males—and direct to a private room or restroom

Start the binx *io* CT/NG Assay while the patient is waiting to be seen by the clinician

3.

Provide test results to the patient and prescribe any necessary treatment in the same visit

- » No follow-up required
- » Fewer patients lost to follow-up

Test and treat in the same visit with the binx *io* CT/NG Assay
