LATEST WORK EXPERIENCE

SENIOR DEVELOPER @ NOVADINE

May 2018 - CURRENT

I originally got hired by NovaDine to build out their v2 API, since then I have worked on many parts of applications across the organization. I am currently responsible for feature development for two javascript applications, one built in Angular, and the other built in Vue.js. In addition to that I am also responsible for maintaining the latest API and it's documentation, both of which I wrote from scratch.

FULL STACK DEVELOPER @ SAMSA.AI

April 2018 - June 2018

This was less of a job and more of an experiment. I met Chris Slaughter and Ari Stiegler on AngelList when I was wanting to get involved with a startup. The crypto boom was just tapering off it's hot streak and I was interested in the space. I helped them with a lot of initial devops tasks by getting their backend build production ready. I also built a container monitoring system using AWS lambda. In addition to this I built out a number of frontend feature in React. Django Rest Framework was on the backend and React was on the front end.

SENIOR DEVELOPER @ PHYSICIANS INSURANCE

June 2017 - January 2018

In this position I was responsible for working on an internal application used to generate insurance quotes for doctors and hospitals. The application used Django Rest Framework on the backend and Angular on the frontend. I was also responsible for general maintenance of their many websites. In addition to this I brought two new developers up to speed so they could contribute to future projects.

ABOUT

Like many dreamers in 2009, I had a startup idea. I didn't have any money or experience at the time so decided to try and build out my app idea all on my own. That didn't work out too well as you have probably guessed, but it took me down a really good road. After just one year of working on my pet project I started making money freelancing for local web agencies. Since then I have worked for a number of clients and have held full time positions in various industries.

SKILLS

Backend Development

Python Django OAS3.0 AWS DOCKER POSTGRESQL

Most of my backend development experience has been with Python using the Django framework.

Frontend Development

ES6 REACT ANGULAR VUE.JS WEBPACK SASS

I have worked with a lot of different frameworks and consider myself pretty flexible on the frontend. Most of my experience is with Vue.js and React.js. I am up to date with modern frontend technologies in general.
