Profile

I love figuring out how to make a system more natural for people. Creating that seamless experience - when a design choice is basically invisible to the user and the experience just flows into their life.

UX Projects

Money Girl (Harness Projects) – 2020

Money Girl provides financial literacy workshops to help empower young women and migrants with their money.

I conducted research into MoneyGirl's target audience and their online presence and provided recommendations on growing their business & platform going forward.

Westpac & Head Start Homes (Harness Projects) – 2020

Head Start Homes works to assist people in social housing, buy their first home.

My app design prototype: 'Zen', centred around building and maintaining good saving habits while keeping stress down.

Zen gamified the saving experience while focusing on mindfulness and stress-free motivation.

Lendlease (Harness Projects) – 2020

Lendlease wanted to explore solutions to help the community in Darling Square connect.

My 2 pillar solution involved an app for people to connect, interact and share experiences together with a digital screen solution to showcase local artists and work.

Education

Harness Projects – UX Career Launcher

AcademyXi – UX Elevate

SAE Qantm - Bachelor of Game Development (Design) -
Dean's List
