

VALENTIN PRUGNAUD

Software Engineer with 6+ years experience
in Full-Stack Development

Email: valentin@whatdafox.com **Cellphone:** +1 (778) 317-4194 **Location:** Vancouver, BC

My goal is to work with a dynamic team of passionate people, with a focus on back-end development, web application, restful APIs or DevOps & automation. I love working on small to large projects, processes, and products to help a team achieve their primary objective.

Although I have a preference for working with Laravel/Vue.js, I am open and ready to dive deeper or explore new technologies and languages (current objectives: AWS, Python, Go). I am currently working on improving continuous integration and continuous delivery processes & Docker/Kubernetes skills, and have an interest in transitioning towards DevOps and automation positions.

WORK EXPERIENCE

Software Engineer

From 2018 to 2019 at Hack Capital in Vancouver, BC

- Maintained legacy system & infrastructure (PHP 5.5)
- Rewrote the LionDesk application (real-estate CRM) Node.js/PHP 7.3 backend, Vue.js frontend
- Deployed with Docker on AWS using Gitlab CI
- Mentored junior developers

Full Stack Developer

In 2018 at Invoke Media in Vancouver, BC

- Built responsive web & mobile applications with Laravel/Vue.js
- Enhanced Agile processes with JIRA
- Lead the implementation of Continuous Integration/Continuous Delivery pipelines by introducing a DevOps culture.
- Mentored Junior Developers

Lead Application Developer

From 2015 to 2017 at WiderFunnel in Vancouver, BC

- Lead the research & development team responsible of building new SaaS products
- Built a client-side analytics engine in JavaScript in an attempt to predict conversion
- Enhanced and automated team internal workflows
- Promoted the company's custom prioritization framework PIETM
- Organized data collection to increase team insights, increase clients ROI and lead towards business data analysis

Web Developer

From 2013 to 2015 at SCC Northwest in Vancouver, BC

- Developed both retail and wholesale e-commerce websites
- Setup server infrastructure (15,000 visitors/month)
- Redesigned product database (over 200,000 custom products)
- Supported customer service team with technical issues
- Translated websites in French to target Quebec customers

Web Developer

From 2012 to 2013 at Agence Backflip in Paris, France

- Developed e-commerce/marketing websites with two web-designers
- Developed newsletters for various clients such as Disneyland Paris, TeaByThe, Moving Puppet
- Created and maintained the server infrastructure for our company and clients

SIDE PROJECTS

Speakbox

Built a public platform offering direct and personalized access to mental health resources across Canada with tools for self-management and community discussions.

Technologies: Node.js, Laravel, NativeScript, Vue.js

Saasquatch Inc..

Built an automated A/B Testing platform for modern web frameworks (React, Vue.js) to accelerate the development, deployment, and execution of experiments.

Technologies: AWS Kinesis, Javascript Embed Snippet, CLI tool
