

## Monthly Operating Cost

CellarPro AH6500S Air Handler System

Kwh Rate (1)	\$0.05	\$0.10	\$0.15	\$0.20
Average Compressor Run Time (2)				
30 Minutes / Hour	\$23.83	\$47.66	\$71.50	\$95.33
40 Minutes / Hour	\$31.74	\$63.49	\$95.23	\$126.98
50 Minutes / Hour	\$39.72	\$79.44	\$119.16	\$158.87

### Notes:

(1) Your Kwh rate can be found on the electric bill that you receive from your electric utility provider.

(2) Estimated run time in a given hour over a 24-hour period. The amount of run time will depend on a number of factors, including the temperature set point, the temperature in the ambient environment outside the wine cellar, ample ventilation and proper maintenance of the wine cooling unit.

### Assumptions:

- The table assumes that the cooling unit's fans are set at the "medium" speed, at which the cooling unit uses approximately 1166 watts when the compressor and fans are "on".
  - The the cooling unit uses 1136 watts at the "low" fan speed and 1240 watts at the "high" fan speed.
  - When the compressor is "off", the cooling unit uses 15 watts.
- We assume 30 days in a month.
