

Virtune Staked Polkadot ETP

Virtune Staked Polkadot ETP is a physically backed Exchange Traded Product (ETP) that seamlessly combines exposure to Polkadot with the benefits of staking. With staking incorporated, this ETP enables investors to generate additional yield on their Polkadot investment. All this is being made through a transparent and physically backed structure with institutional grade security.

Key benefits

Polkadot

Polkadot is an innovative blockchain technology designed to connect multiple specialized blockchains into a single, unified network. It aims to achieve true interoperability and scalability by allowing different blockchains to communicate and share data and transactions. This approach enhances the functionality and efficiency of the individual blockchains, while maintaining high security and decentralization. Polkadot represents a significant step forward in the evolution of blockchain technology, addressing some of the limitations of earlier blockchain networks.

4% additional annual return through staking

Staking allows an additional yield on your Polkadot investment while actively supporting the blockchain network. By including staking, you receive 4% additional annual return on your Polkadot investment on the same time as you are contributing to decentralization.

Non-custodial staking for increased security

Non-custodial staking enhances security and control, through staking being made directly from cold storage, eliminating the need and risk of transferring cryptocurrencies to any third party.
