

Transforming Communication in the Pharmaceutical and Life Sciences Industry

In today's dynamic and fast-paced pharmaceutical and life sciences industry, effective communication is vital for success.

Seamless collaboration, streamlined workflows, and regulatory compliance are essential to drive innovation, enhance productivity in a distributed workforce, and deliver life saving and life-enhancing solutions. This is where UC automation management and UC performance management come in.

T H E V A L U E

Streamline communication workflows, improve productivity, and reduce costs.

Ensure regulatory compliance through secure and auditable communication processes.

Optimize UC performance, delivering seamless collaboration experiences.

Enhance customer engagement and strengthen relationships.

VOSS for Life Sciences

VOSS is the award-winning provider of digital workplace management technology, empowering pharmaceutical and life sciences organizations to achieve higher levels of automation and gain valuable insights across their communications platform.

What sets VOSS apart is our comprehensive offering of discovery & migration, orchestration fulfillment & analytics, and performance monitoring & management. Each overarching multiple UC technologies, and all available through a secure and highly flexible web portal.

Streamlining communication workflows

Pharmaceutical and life sciences companies operate in a complex environment with diverse stakeholders and complex processes. UC automation management revolutionizes communication by simplifying and automating workflows, resulting in enhanced efficiency, reduced operational costs, and unlocking the following benefits:

Workflow optimization: Integrate and automate business processes, such as onboarding and offboarding users, spinning up temporary teams, or carrying out upgrades, to save time and increase productivity.

Seamless integration: Seamlessly integrate UC solutions with existing systems and applications, including CRM, ERP, and project management tools, to eliminate information silos and streamline cross-functional collaboration.

Enhanced compliance: Ensure adherence to industry regulations by automating documentation, archiving and audit trails, reducing the risk of errors, and improving data security.

Improved customer experience: Accelerate response times, enable self-service options, and provide personalized interactions to enhance customer satisfaction and strengthen relationships.

Optimizing communication efficiency

In the pharmaceutical and life sciences industry, where clear and timely communication is crucial, UC performance management plays a pivotal role in maximizing communication efficiency and minimizing disruptions. It empowers organizations to monitor, analyze, and optimize their UC infrastructure, leading to improved performance and seamless collaboration, and delivering the following business value:

Proactive monitoring

Gain real-time insights into the health and performance of your UC environment, allowing quick identification and resolution of issues before they impact critical operations.

Performance optimization

Analyze usage patterns, call quality metrics, and network performance to identify bottlenecks, optimize resources, and ensure reliable and high-quality communication experiences.

Capacity planning

Plan for future growth by monitoring usage trends, identifying peak times, and accurately predicting infrastructure requirements to maintain optimal performance.

User experience enhancement

Continuously monitor user satisfaction, user adoption rates, measure call quality, and gather feedback to identify areas for improvement, ensuring a seamless and positive user experience.

T H E V O S S S U I T E

At VOSS, we empower our customers to reduce operational costs, improve service reliability, strengthen governance and data protection, and adapt their digital workplace as business models, employee expectations, and organizational requirements evolve.

The VOSS platform is the foundation of our product suite. Each product - from automation to monitoring and analytics - is built on the same consistent framework, providing a common set of tools, data, and integrations across your digital workplace.

The platform unifies four essential capabilities in a single architecture - automation, monitoring, analytics, and AI - offering a unified foundation for managing complex enterprise environments. By integrating with core business systems and collaboration platforms, VOSS enables you to automate operational workflows, enforce governance, and gain real-time visibility into performance and across employees, devices, and infrastructure.

VOSS Discover provides a comprehensive inventory and analysis of your collaboration and digital workplace tools, enabling you to understand your current environment, identify inefficiencies, and plan transformations with precision.

VOSS Migrate automates the extraction, transformation, validation, and loading of users, devices, and collaboration data, reducing the risk, cost, and complexity of any large-scale migration or platform change.
