

**Position:** Mobile QA Test Engineer Intern

**Period & Start date:** 3-6 months, flexible start date

## History

Treeapp (thetreeapp.org) was founded because our team realised the devastated state of the world's environment. Treeapp enables anyone to have an impact, just by doing a simple action on their phone every day. We chose trees, because deforestation is a pressing issue that needs to be addressed.

## Technology at Treeapp

Our end goal is to let anyone come on our platform and be able to start living a sustainable lifestyle, through both tailored suggestions of products/information and the ability to create real impact (plant trees only for now) online/offline. Treeapp has been growing rapidly and gained over 60,000 users. We are dynamic and are constantly building different new systems and evolving/scaling our existing systems. Some of the technologies we use include Flutter, Spring, Postgres and Google Cloud for most of our infrastructure.

## The role

As a Mobile QA Test Engineer you will join a cross functional Agile team analysing what level testing should be completed and then write and execute functional, physical and user tests on our mobile application platform(s). You'll be profiling and debugging using tools such as XCode, Android Studio and VS Code; and logging and investigating when and how bugs were introduced.

You will liaise with the customer service team to monitor bugs reported by our users and triage each report so that the development teams can fix known issues.

There's currently a remote interview and onboarding process as well as the ability to work from home. In time, you will join colleagues in the London office. You will be joining a diverse team environment with a range of perks, training and career development opportunities.

## What we look for:

- Experience of testing mobile applications or a passion and desire to learn how.
- Knowledge or want to learn mobile test automation tools or processes.
- Passion and desire to think like our users and design testing, aiming to deliver a high quality product.
- Ability to work with a number of different teams and consolidate and manage feedback accordingly.
- Excellent communication and collaboration skills.

## What we'd love to see:

- Successfully held a QA Tester role OR wishes to start a career in QA and testing.
- Holds or is studying towards a computer science or equivalent degree.
- Experience in testing on multiple platforms, including Mobile, Console and Web.
- Experience in creating Test and Use Cases.
- Interest in software engineering development and computer science.
- Knowledge of process within an agile environment (scrum).

- Knowledge of bug tracking software used in the industry e.g. JIRA.
- Understanding of localisation and internationalisation.
- Experience using tools such as VS Code.
- Experience using Source Control (Git / GitHub / Source Tree)

### **What you'll get:**

- Work with the co-founders who founded businesses valued £30mln+ and experienced engineers.
- Monthly drinks on the team.
- Have your own personal impact on positively contributing to restoring the world forests.
- Upon successful completion of the internship, potential to convert to full time employment.

### **Contact details**

If interested, please send your CV + Motivational letter (Optional) to [careers@thetreeapp.org](mailto:careers@thetreeapp.org)

Do **you** want to change the world? **Join us and we'll change it together.**

Treeapp cultivates a culture of inclusion and equal opportunities without regard to race, religion, gender, gender identity, sexual orientation, national origin, disability, age or other. We recruit and reward based on capability and performance and believe differences and unique perspectives will create a thriving and innovative community.
