treeapp

Position: Software Engineer Intern

Period & Start date: 3-6 months, flexible start date

History

Treeapp (thetreeapp.org) was founded because our team realised the devastated state of the world's environment. Treeapp enables anyone to have an impact, just by doing a simple action on their phone every day. We chose trees, because deforestation is a pressing issue that needs to be addressed.

Technology at Treeapp

Our end goal is to let anyone come on our platform and be able to start living a sustainable lifestyle, through both tailored suggestions of products/information and the ability to create real impact (plant trees only for now) online/offline. Treeapp has been growing rapidly and gained over 20,000 users in the first six months after launching. We are dynamic and are constantly building different new systems and evolving/scaling our existing systems. Some of the technologies we use include Flutter, Spring, Postgres and Google Cloud for most of our infrastructure.

What we look for:

- Currently pursuing a bachelor's or master's degree in Computer Science
- Proficient in frontend or backend development
- Passion for our goal and strong desire to be part of the mission

What we'd love to see:

- Strong programming skills
- Cool things that you have built
- Experience in software engineering

What you'll get:

- Work with the co-founders, serial entrepreneurs who founded businesses valued £30mln+
- Monthly drinks on the founders (when quarantine is over!)
- Have your own personal impact on positively contributing to restoring the world forests
- Upon successful completion of the internship, potential to convert to full time employment
