

PRO EVO

MAGBILINE
HANDBIKES

**BUILT FOR THE ROAD.
READY FOR *ANYTHING.***

YOUR PERFECT FIT

The adjustable fork allows precise customization of both height and length, enabling you to tailor the riding position to your individual needs. This ensures optimal comfort and improved bike control, making every ride more efficient and enjoyable.

ENHANCED RIDER SIGHT

The Pro Evo comes in two setups: a higher position for improved visibility and comfort, featuring a support post for the backrest.

PERFORMANCE SETUP

Alternatively, the race position uses two side rods to create a more aggressive, aerodynamic posture.

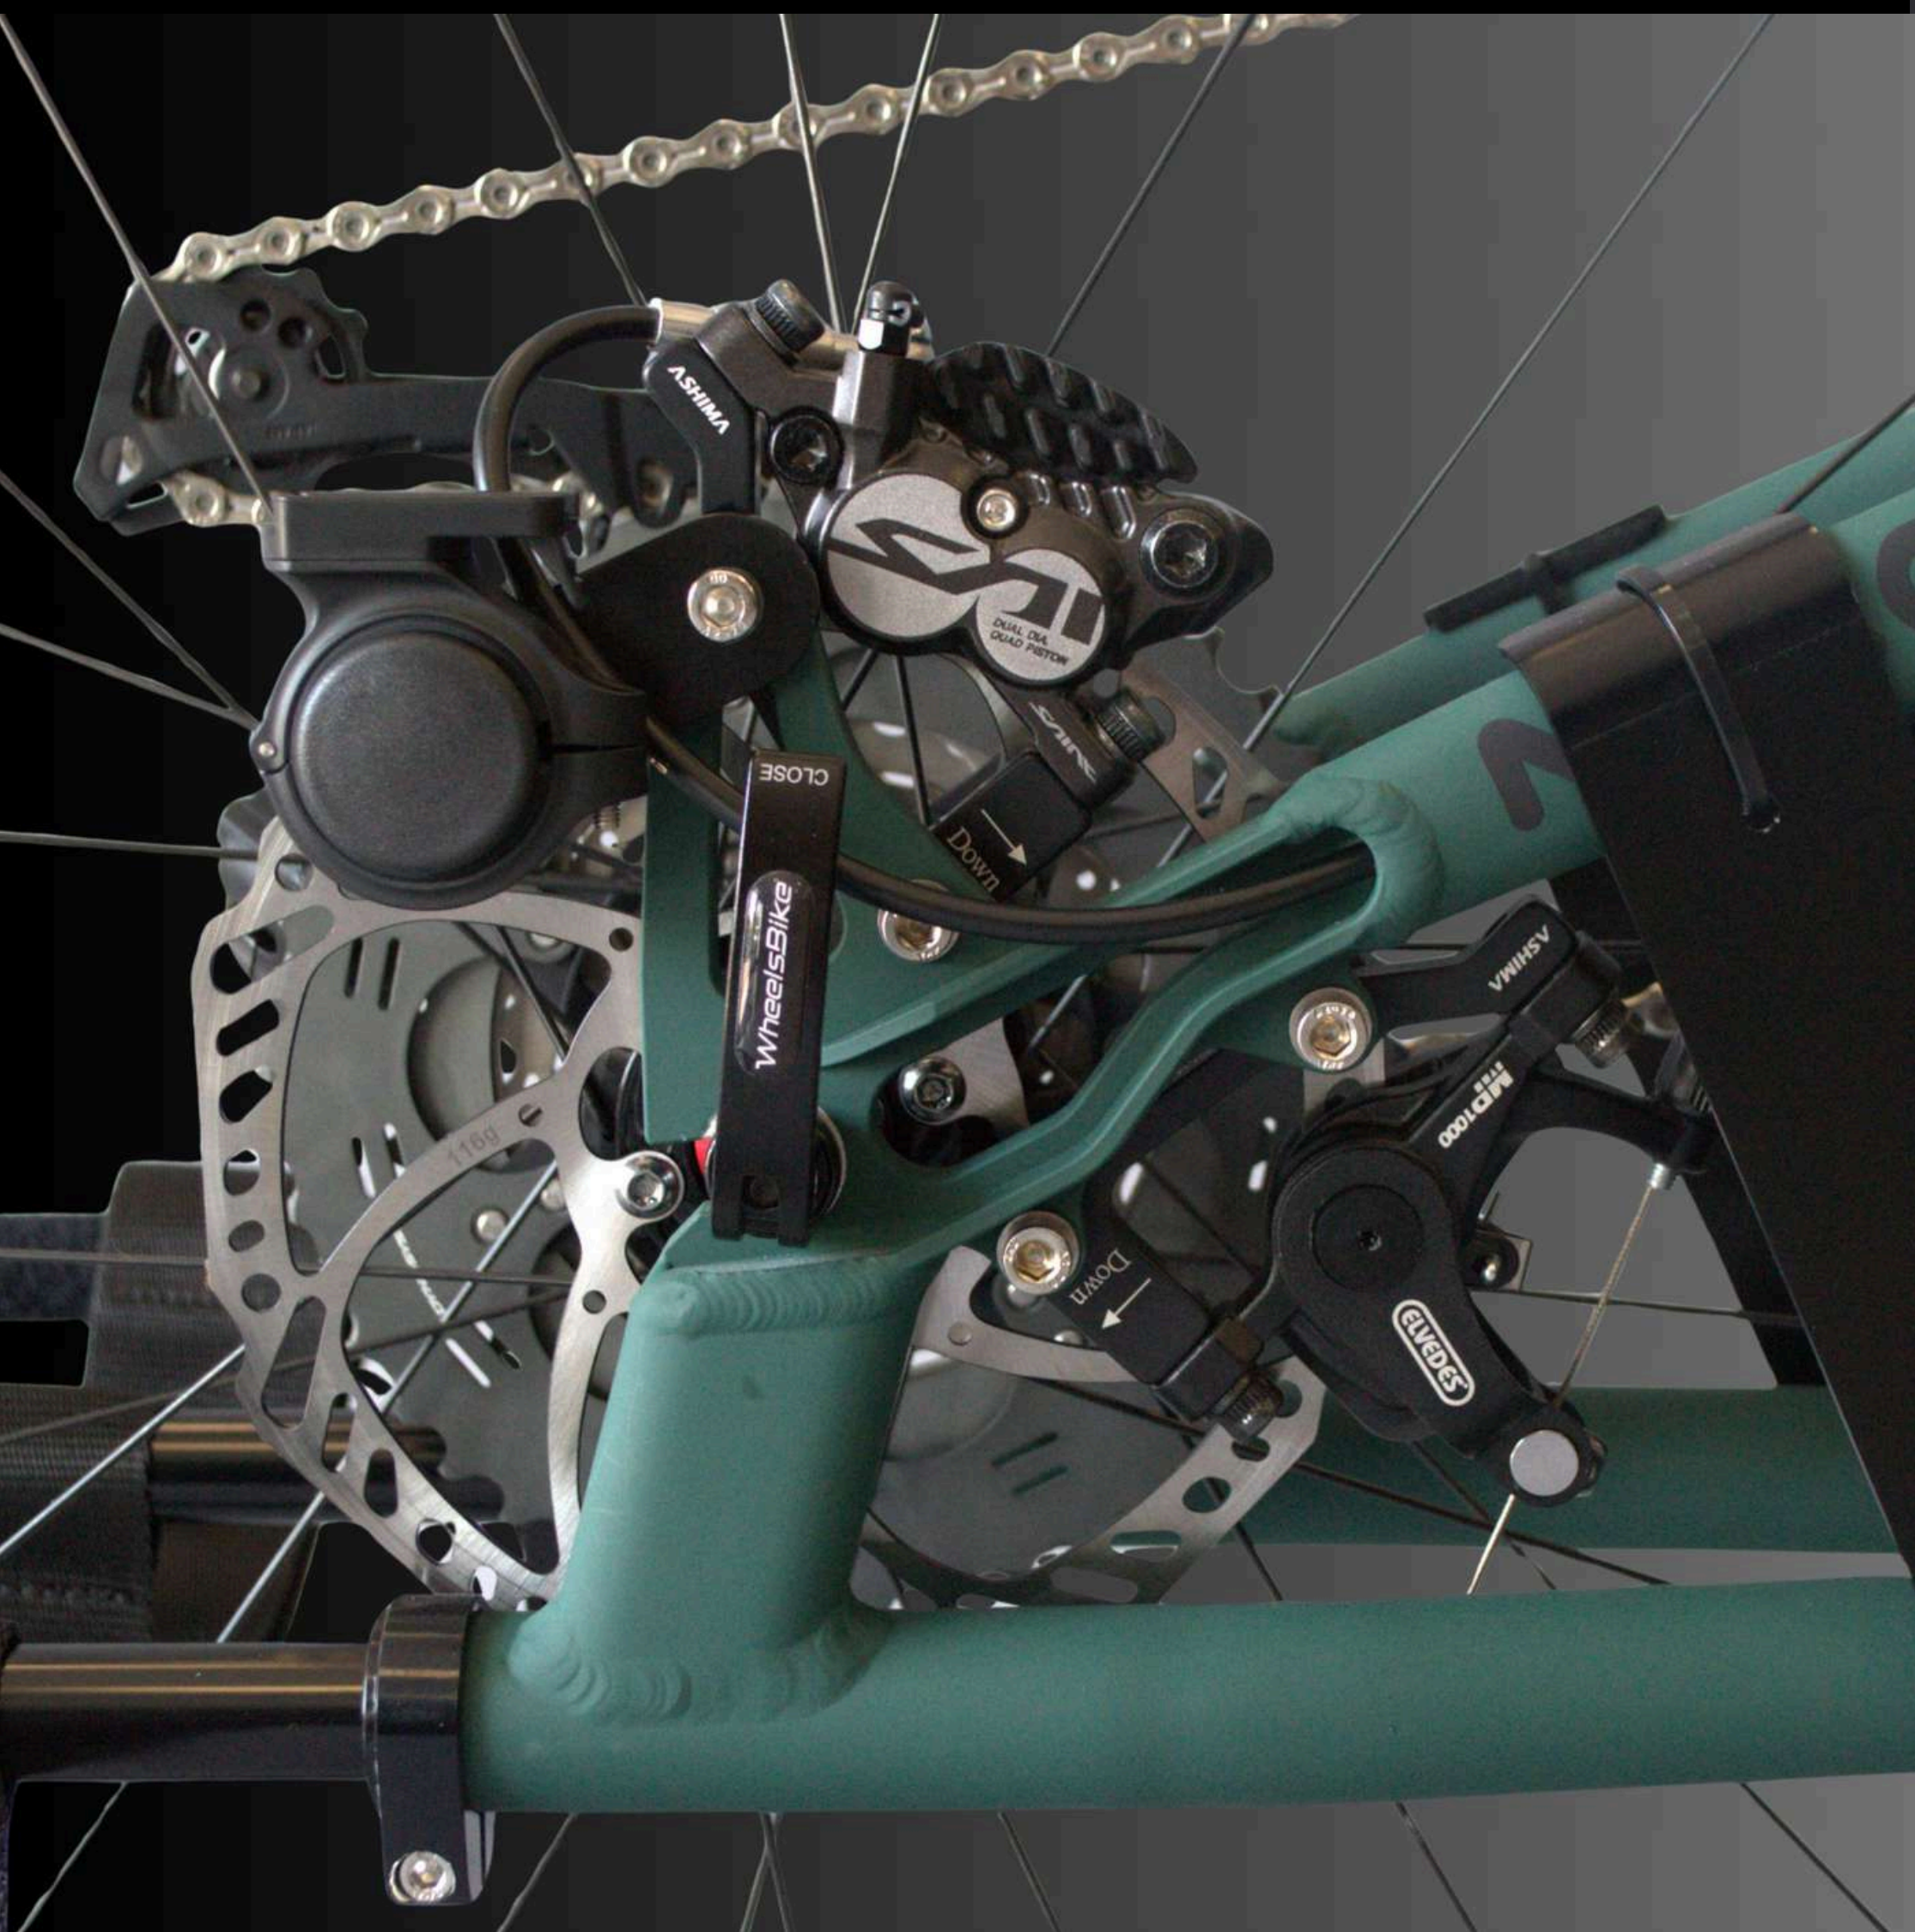

HOLD STEADY

The parking brake ensures stability during stops and transfers, offering safety, independence and peace of mind.

CLASSIC CONTROL

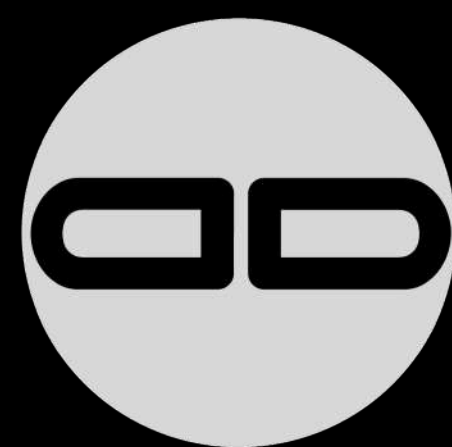

Available as part of the configurable parking brake system: choose between rim or disc caliper based on your technical and functional requirements.

The rim brake caliper for parking function is lightweight, reliable and easy to maintain.

ADVANCED ADAPTABILITY

Alternatively, the disc brake caliper provides more clearance between the aluminum tubes and, since no bridge is needed for the rim caliper parking brake, it allows mounting wheels of both 571 and 584 sizes.
