

MAINTAINING THE OIX-2 STANDARD

The Data Center Standards Committee will be responsible for reviewing the OIX-2 Standard on an annual basis. The focus of any recommended changes to the Standard will be on maintaining relevance in the wake of new technologies and evolving best practices. After the annual review, the Committee will propose any recommended changes to the members. After allowing 14 calendar days for ensuing dialogue and potential further modification, the committee will present its recommended changes to the board for final approval. Additionally, from time to time, in the practical application of the standard, the Committee may deem it appropriate to modify or clarify the Standard. This may be done by simply recommending any such changes to the members list, and after allowing 14 calendar days for ensuing dialogue, make its recommendation to the board.
