

PLA Filament 1.75 mm

PLA (Polylactic acid) is the best material for getting started with your 3D printer, as it:

- Hardens quickly
- Has minimal thermal tension
- Has minimal deformation
- Does not require Kapton tape
- Does not require heated bed
- Acetone-resistant

BQ PLA filament is made from 100% PLA.

PLA is a biodegradable product obtained from plant-derived sugars.

Filament Diameter: 1.75 mm
 Thickness: 1.24 g/cm³ (ASTM D792)
 Weight: 1 kg
 Spool Size: 195 mm x 73 mm

Compatible with: any printer that uses 1.75 mm filament
