

TAXILA v2

The Next Generation Knowledge Aggregation and Intelligent Analytics Platform

Text Analysis and Intelligence Platform

Convert text to actionable insights: combine powerful aggregation, search, text mining, machine learning and AI technologies.

Taxila provides automatic context-aware aggregation and search of relevant information, driven by AI-powered mining and analytics engine for driving actionable insights with a intuitive user interface.

The collage includes several key features:

- NEWS read:** A dashboard showing a list of news articles with titles and brief descriptions.
- Geographic trends:** A bubble chart where the size of each bubble represents the volume of data for a specific geographic location.
- KOL Search:** A grid of profile cards for Key Opinion Leaders (KOLs), each with a name and a small image.
- Reporting:** A complex dashboard with multiple charts, tables, and filters for data reporting.
- Summarization:** A section showing a summary of text, possibly generated by AI.
- Context analysis:** A word cloud where the size of words indicates their frequency or importance in a given context.
- Trends analysis:** A line graph showing data trends over time.

Convert Text to Actionable Insights

- A 360° aggregate view to assist decision-making.
 - Domain-specific Scientific Publications
 - News, Reports
 - RWE (Real World Evidence) / Social Media
 - Business Marketing Landscapes
- Apply machine learning / AI technology to the collected multidimensional data to analyze trends in the field and obtain insights
- Cloud-based, secure and scalable system
