Kaskad

PRINTING INFORMATION – KASKAD FOLIO

Where Kaskad is used

Kaskad provides tonnes of scope for creativity. The combination of the large number of colours and grammages offer endless opportunities. Kaskad is very suited to printed collateral, both with text and with lighter images, such as advertising prints, brochures, information material, posters, envelopes, covers, folders, books, etc. The lower grammages are also suited for use as tickets, forms, etc.

Printing methods

Kaskad is suitable for printing in offset, flexography, book printing and screen printing (over 100 gsm) and letterpress. The printing ink used should be intended for uncoated paper.

Repro

120 lines/inch (48 lines/cm) is a suitable screen density. Image choice and text should be selected in relation to the colour and colour strength of the paper. Text and light images work best. Repro adjustments should be made as needed.

Print Finishing

Kaskad is suitable for binding with glue, thread or staples. In the upper grammage range, the paper should be scored before folding. Laminating is possible from 100 g/m² and above. Care should however be taken when laminating dark printed areas, as patchiness easily can appear.

Special advice

Remember that the colour of the paper affects the printing, and adapt the choice of images accordingly. Kaskad is not suitable for varnishing, as the lacquer is easily absorbed by the paper.

Product specifications

Kaskad is a vat coloured, wood-free, uncoated paper. It is manufactured from chlorine-free pulp and is pH-neutral. Kaskad has a matt, non-reflective surface and is resistant to ageing in accordance with ISO 9706. Kaskad is available as standard in a number of different formats, colours and grammages, anything from 70 to 270 g/m².
