WINTER WRUP-CYCLING

Winter Wrup-Cycling revives recycled materials into high-quality coverings. This upcycling process has been developed by Winter & Company. It allows to recycle valuable raw materials, ensures that they are used for high-quality products and do not end up as waste. Winter Wrup-Cycling was applied to the production of Wintan® Corral.
Tannery waste fibres are transformed into a durable cover material. The surface finish of Wintan® Corral consists of a fully aqueous, acrylic coating, directly applied through a knife over roll process. Low risk chemicals ensure the lowest environmental impact, whilst at the same time creating an attractive and sustainable new material.

Winter Wrup-Cycling reduces the environmental impact further by manufacturing long lasting cover materials.

WASTE EQUIVALENT

The use of tannery waste is an effective way to reduce the environmental impact. The recycling process produces a new product in a continuous roll form, true to the characteristics of real leather. At the same time saving a significant amount of waste that would otherwise have gone to landfill.
