6 PLAY IN FRACTIONS

BEST PRACTICES

The sound of your band, if there are 7 musicians, should add up to "1" at all times. In other words, if there are 7 musicians playing, each of them should play about 1/7 of what they could possibly play. Not filling all the space in music creates "space," and allows the music to breathe. When a band is adding up to 7 – everyone playing constantly – the music is too dense and feels frantic.

Play in fractions, and the pleasing sound will support the worship – the reason we play in the first place.

ESSENTIALS IN WORSHIP
