

Séura lighted mirrors are designed to be surface-mounted to a wall. The mirror housing is mounted to the wall and provides a safe and secure enclosure for all the electrical components and mounting brackets that support the weight of the mirror. Séura's patented marine-grade mirror housing offers significant function and design benefits to lighted mirrors.

**Brightest design**

Enjoy up to 2x more lux output\* for a brighter lighted mirror with LEDs positioned closer to the mirror etch.

**Slimmest profile**

Lighted mirrors are surface-mounted to a wall and extend only 1.5-inches from the wall, reducing the product depth by 25% for a more elegant design.

**Lightest weight**

New mirror housing is 50% lighter in weight, allowing for easier handling and installation.

**Most energy-efficient**

Séura's Radiant COB LED Technology™ shines brightly for over a decade and consumes 40% less power than previous Séura LEDs.

**Best in damp environments**

Marine-grade housing resists mold, mildew, and bacteria, and is made of rust-free materials so there's no worry about corrosion from exposure to moisture and humidity.

\*Lux measurements vary by lighting design
