CLEAN WATER PROJECT

A young woman with dark skin and short hair is walking, carrying a large, dark, cylindrical wooden water pot balanced on her head. She is wearing a dark blue long-sleeved top with a colorful, beaded V-neckline and a patterned skirt. The background is blurred, showing an outdoor setting.

How To Contribute

♦/ Introduction

Drinking dirty water is one of the most common causes of death in the developing world despite being one of the most preventable. Safe, drinking water helps some of the most desperate families to break free from poverty and illness.

Water is vital for drinking, cooking, hygiene and farming. With reliable access to water, thousands of lives could be saved each day.

♦ The Problem

The statistics relating to the global water crisis are nothing short of frightening, with men, women and children all suffering.

Some of the figures are:

FACTS FIGURES

2.2 Billion People

One-third of the global population are without easy access to clean water

4.2 Billion People

the number of people around the world without sanitation

200 Million Hours

time spent by women in Africa walking to collect water every day

443 Million School Days

School days missed by children every year because of poor access to safe water

50% OF HOSPITAL

Half of the hospital beds in the developing world are filled with patients with water-related illnesses

EVERY 37 SECONDS

One person dies as a result of an illness caused by dirty water every day

For IDPs and refugees living in camps, provisions of clean water is desperately low. Most lack access to drinking water, bathing facilities and sewage.

Why is Clean Water Essential?

Access to
clean water

Access to clean water is important to our health, a sustainable economy, and a basic life necessity.

Boosting
Economic Growth

Improved water supply and better management of water resources will contribute greatly to countries' economic growth and reducing poverty.

Prevention
of sickness

Contaminated water can transmit diseases like diarrhoea, cholera, typhoid and polio. Each year, contaminated drinking water is estimated to cause 485,000 deaths.

Where Do We Work

One of Global Ehsan Relief's core projects is Care for Clean Water.

Our mission is to ensure that communities all around the world have ease of access to one of the most important needs of life.

Water scarcity, poverty, political stability, and strong partner organizations all play a part in where we choose to work.

One of our main focus is to provide rural communities with their first access to sufficient clean water. While some of our projects focus on building new water wells, we also ensure that we are consistently taking care of the ones we've already built .

We fund water projects and provide access to clean water for countries in Asia and the Middle East such as in Bangladesh, Cambodia, Sri Lanka, Gaza, Yemen and more.

How We Work

We are passionate about eliminating various inequalities happening around us

and are committed to the long-term journey of shaping a fairer and safer world. Our target is to provide safe drinking water and a sustainable source of clean water to at-risk communities all over the world.

Our partners on the ground will assess the situation in the villages and areas that are in dire need of a clean water supply.

We are implementing a range of projects that support and empower local communities such as building sustainable water wells, maintaining water trucking services in displacement camps and building water stations.

Your donations will help provide clean drinking water to thousands of people daily.

To date, we have built more than

3000

Water Wells

287

Ablution Places

122

Community Water Wells

Additionally,

we have supplied water tankers for the Rohingya Refugees in Bangladesh, Gaza and Yemen.

Each supplying them with **150,000** litres of clean water every month.

**OUR
SUSTAINABLE
SOLUTIONS**

WATER WELLS

Lack of access to clean water - it's one of the biggest challenges faced by developing countries that suffer from famine or drought. Often, they would have to turn to open water sources. Unfortunately, an unsealed water source often results in dirty and contaminated water, leading to the spread of diseases.

Join us in our mission to build water wells for the poorest communities in Sri Lanka, Bangladesh, Cambodia, Pakistan and Myanmar to make clean water accessible. You can help build a water well and provide clean, potable water that can last for ten years or more!

For every water well donation made, our donors will receive the following upon completion:

- 1 Certificate
- 2 Report
- 3 Photos and Videos of Beneficiaries

\$325

PER WATER WELL

A Donation

• COMMUNITY WATER WELLS

A Community Water Well (CWW) is equipped with 6 taps, a generous washing area, a water tank and an electrical pump to draw the water from under the ground. Each well can provide 5 to 10 families with clean water and an estimated 40-50 people will benefit from each CWW.

Our community water wells are built mostly in Cambodia, where most families in rural areas have no access to clean water. They usually take around 3 to 6 months to complete.

Your charity will change lives and give sadaqah in return.

For every water well donation made, our donors will receive the following upon completion:

- 1 Certificate
- 2 Report
- 3 Photos and Videos of Beneficiaries

\$950

ABLUTION PLACE

Allow the underprivileged to perform ablution for their prayers. In more rural areas, these ablution places are a vital lifeline for the locals. It is more than just a means for prayer - an ablution place also provides reliable access to clean water for everyone in the vicinity.

You can either build an ablution place in your name, or in the name of a loved one. Alternatively, you can also provide two names on each ablution place.

Providing water through this means is a good way to offer Sadaqah Jariyah (continuous charity) as the donor will insya-Allah continue to reap Allah's blessings, for as long as the villagers continue to benefit from the ablution place.

Perform a tremendous act of charity that will last for ten years or more, insya-Allah.

For every water well donation made, our donors will receive the following upon completion:

- 1 Certificate
- 2 Report
- 3 Photos and Videos of Beneficiaries

Water Trucking

For many vulnerable communities in poverty stricken and war-torn countries, these water tankers are their only source of clean water supply. Water tankers benefit not only the refugees, but also anyone who needs it, especially disaster victims.

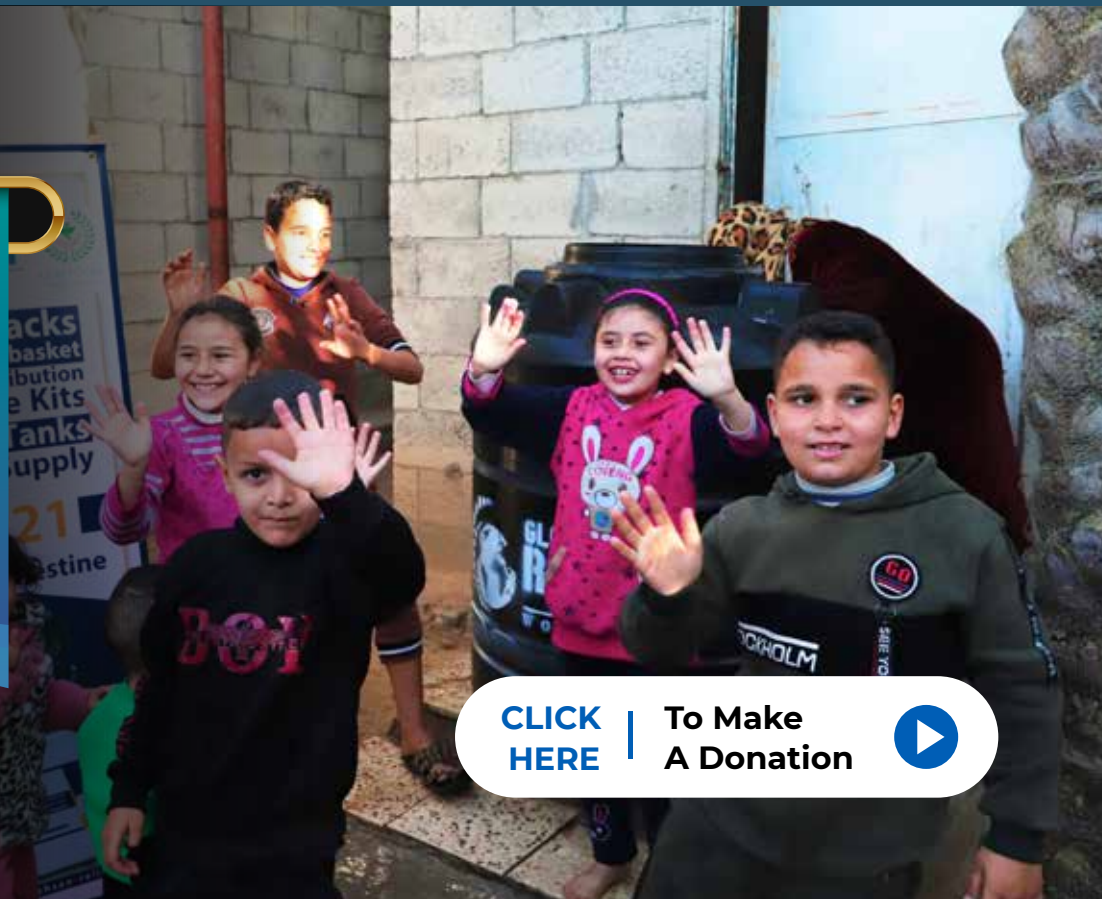

We seek your support to fund the purchase and delivery of water tankers to these families.

We are targeting to deliver 150,000 litres of clean water to 30,000 beneficiaries and with your help, we can achieve this together.

💧 Clean Water for Gaza

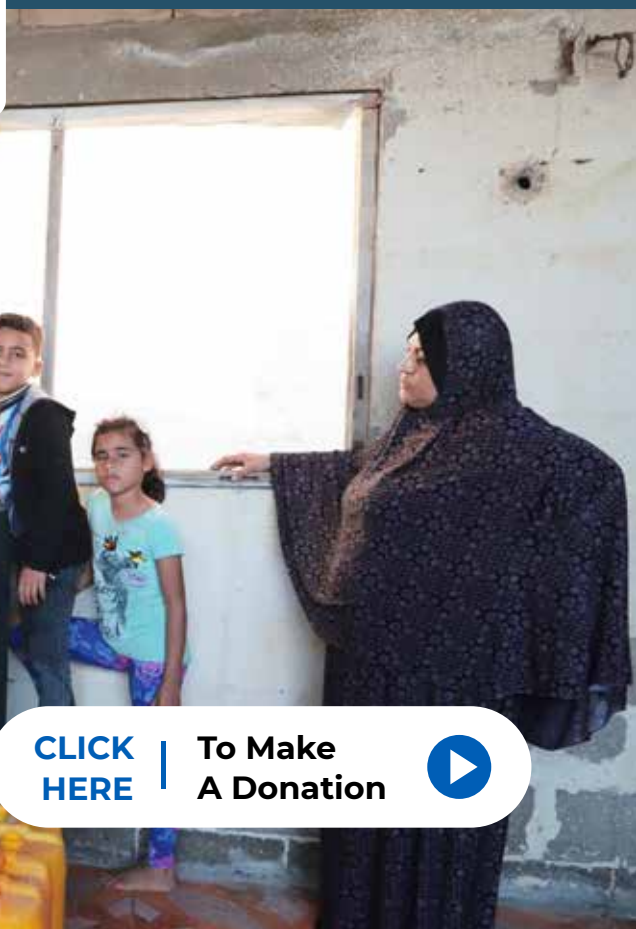

Access to clean water is possibly the most formidable tool for sparking economic growth.

2 million Palestinians in the Gaza Strip are without clean drinking water as 97% of the drinking water in the Gaza Strip is contaminated and impotable because of sewage pollution.

Within this project we are seeking long-term sustainable solution which can provide 24 hour access to clean drinking water to residents of Gaza, hospital, masjids, schools through the following:

- We are aiming to distribute 500 water tanks
- Providing 500 families with clean drinking water for the entire year.

Your support that will help us save and improve the lives of people living in desperate conditions.

How does this benefit you and others?

How does this benefit you?

By donating to our Care for Clean Water project, you will be able to provide a greater quality of life to impoverished communities and beneficiaries.

Based on the blueprint set by the United Nations, we hope to fulfill one of the Sustainable Development Goals: Universal and equitable access to safe and affordable drinking water.

On top of that, Wakaf is enormously beneficial for your hereafter, ensuring the influx of good deeds even after death, so long as the donated property or items are being used.

How does this benefit others?

By contributing to our campaigns, you will be able to;

- Prevent deaths that are caused by contaminated water.
- Allow communities to recover from the pandemic.
- Allow girls more time to seek education instead of collecting water.
- Provide a clean and uncontaminated water supply to the underprivileged people around the world, ensuring their survival.

Since 2015

Global Ehsan Relief has been providing clean water supply to the poor and needy and refugees in Asia and the Middle East.

Below is our track record over the years:

122

Community water wells built in Cambodia

4,880

beneficiaries provided with safe, clean water.

1.8mil

litres of Water Supplies built in Gaza

750

beneficiaries provided with safe, clean water.

150

Water Tanks with water supply installed in Gaza

3050

Water Wells built in Cambodia, Bangladesh, Pakistan, Sri Lanka, Myanmar

45,750

beneficiaries provided with safe, clean water.

287

Ablution places built in Cambodia and Sri Lanka

11,480

beneficiaries provided with safe, clean water.

6.7mil

litres of Water Tanker In Yemen, Gaza, Rohingya refugee camp in Bangladesh

13,435

beneficiaries provided with safe, clean water.

On site testimonials from our beneficiaries

From our Community water wells to ablution places, read on to see how much our projects have impacted our beneficiaries .

COMMUNITY WATER WELLS

Mrs. Khadi lives at Ongkrouch village, Bourei Cholsar district, Takeo province, Cambodia. Because of the lack of access to clean water, she lived in a difficult situation and had been forced to collect water at the dirty pond near her house - which is an arduous journey of 5 miles.

She laments that it was hard for her and her fellow villagers. When the dry season came, she didn't have any water to collect at all. Alhamdulillah after receiving the community water wells from us, she feels happy and thankful. She spoke to us with deep joy, knowing that now her village of five families have enough clean water to use daily for activities like cooking, bathing, washing clothes and even to take ablution.

She makes Dua for our donors and for our organisation, with a smile on her face.

ABLUTION PLACES

Location:

Toul Sombour village, Tompeang pring Commune, Dom bae district, Tbong Khmum province. Cambodia.

Small in stature but big in heart, Uncle Jakfar, the imam in the Masjid which we provide the ablution place. He will do anything for his community to make sure they have water.

"Before we had water, life was hard," he says. "My children and all my villagers were suffering because of it. Every morning we would have to go and collect water from the river. We were very happy when we got water."

With the ablution place in the Masjid, all the villagers have access to clean water in taking Wudhu, and the villagers around the Masjid also have enough water to use in daily need. Not only did children stop getting sick from drinking contaminated river water, but they saved an hour or more each day they used to spend fetching water." Uncle Jakfar expressed.

Alhamdulillah, we thank all donors and the Global Ehsan Relief Cambodia team, "Now, we feel free to use the water whenever we want," says Uncle Jakfar. "For cooking, washing hands, taking a bath, taking Wudhu."

WATER WELLS

Location:

Chomka Ckhek village, Krobov Commune,
Komchay Mea district, Prey Veng Province, Cambodia

Meet Sister Sofiya and her husband, with their newborn baby. The couple are both working as farmers - they don't get a regular income and for the job, they need sufficient water to process.

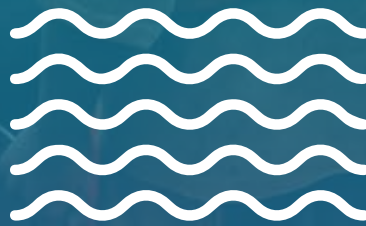

She describes that water is important not just for work, but more importantly for their daily use. Her newborn baby especially needs clean water and sadly, he is the one most susceptible to the effects from contaminated water. Sister Sofiya collects the water from the lake or pond that is quite a distance from their place. During the rainy season, she bought a big pot to store the water - though this water is still unsafe for her baby and not enough for daily use.

She expressed with joy that this water well is a valuable gift from Allah s.w.t to her and her family. She shares her gratitude towards Global Ehsan Relief Cambodia, who gifted the water well to her family.

In her words: "I and my family wish the organisation and donors the best for your family. May Allah reward you for what you did for our poverty community here."
