

The Furrer+Frey All-In-One Charging Station

The next generation

The Furrer+Frey All-In-One Charging Station integrates all charging electronics into the vertical mast for a remarkably small total footprint of less than 0.5 m², giving more room for pedestrians. Since no space is necessary for an external „electronics box“, planning and installation are more simple.

High quality components and good serviceability ensure trouble free and efficient operation.

Benefits

- Integrated charging electronics
- Parallel, redundant power electronics for high availability
- Trendsetting OPPCharge Interface
- Less complicated site preparation
- Field upgradeable charging power

Specifications

Charger Duty Cycle:	Continuous
Charging Interface:	OPPCharge Compatible
Output Voltage:	500 to 850 VDC
Charging Power:	150 to 300 kW
Input:	400 V 3-Phase
Standards:	IEC61851 ISO15118
