INFORMATION

WHY WAXING ?

If the surface has started to discolour, is dull, oxidise or if the gelcoat has been subjected to a lot of wear and tear, let us bring her back to a nice gloss and protect your vessel.

WHAT YOU CAN EXPECT:

If your boat has light to medium oxidation, we can buff and wax it to cut through the oxidation, bring back a nice gloss and protect the gel coat for another season.

We use a compound and wax mixture with a power buffer to give your gel coat an even, all over shine.

We use only top quality products to provide you with the best results.

If your boat has medium to heavy oxidation, we use a two step process to cut through the oxidation.

Step 1 - Compounding with a power buffer.

Step 2 - Wax and buffing off to maintain the new glossy shine and provide protection against those harmful UV rays.
