

YOUTH STARTS IN THE DNA  
**REPACELL®**

**REPACELL®**

# THE REPACELL®-STORY

This innovative cosmetics line is based on the cell research of the telomerase (enzyme of the nucleus).

Frequently referred to as the "enzyme of youth".

Awarded with the Nobel Prize in 2009.

Telomeres have been identified as the key element in cellular aging. The discovery of telomeres and their enzymes telomerase can strengthen and prolong the youthfulness of the skin.

## Goal:

- ✓ Protection of the telomere DNA
- ✓ Prolong cell longevity.
- ✓ Promote a youthful appearance

# THE SECRET OF TELOMERASE

Without telomerase:

- The long ends of the chromosome, called telomere, are shortened with every cell division
- As a consequence, the telomere DNA is removed
- The chromosome is damaged

# THE SECRET OF TELOMERASE

With telomerase:

- The telomere can be protected, the shortening process reduced and a repair enabled.
- The DNA telomere ends remain long.
