United Methodist Women

"Our voices should be heard"

Dozens marched across the United States on Saturday, June 2, to raise awareness to gun violence, holding orange signs that read "WE CAN STOP GUN VIOLENCE". Wearing Orange was inspired by friends of Hadiya Pendleton, a 15-year-old Chicago student killed by gunfire in 2013.

After all the thoughts and prayers; they weren't enough. After Sandy Hook we hoped that this would never happen again. Yet here we are, San Bernardino, Charleston, Parkland, and Santa Fe High School. Every day, lives are being lost to gun violence.

Lawmakers are debating how best to protect kids in schools, and much of the disagreement has centered on whether to hire resource officers, arm teachers or do both. The answer to a key question- how effectively can someone with a gun protect a school from someone else with a gun?

Gun violence is not inevitable. It is preventable.

Kathy Rollock - Ecumenical Action Coordinator, Church Women United

Laundry Ministry

"Clean Hearts, Clean Minds, Clean Clothes"

Health & Wellness

THE COLOR OF THE MONTH IS PURPLE TO SUPPORT THOSE SUFFERING FROM ALZHEIMER'S DISEASE AND CHILDREN WITH TOURETTE SYNDROME

Alzheimer's disease usually progresses gradually, lasting 2 to 20 years, with an average of seven years in the United States. Scientists now know that Alzheimer's disease exists in a person's body long before symptoms appear. Researchers call this the pre-clinical/pre-symptomatic stage. Once symptoms do appear, they increase in severity as a person with Alzheimer's moves from the earliest to the final stages of the disease.

In general, it may be time to seek evaluation by a qualified physician if the memory loss or other symptom for you or a loved one exhibit:

- Increases in frequency or severity.
- Interferes with daily activities (such as employment tasks or family chores).
- Makes an impression on friends and family.

Tourette Syndrome (TS) is a neurological disorder characterized by repetitive, involuntary movements and vocalizations called tics. The early symptoms are typically noticed first in childhood, with the average onset between the ages of 3 and 9 years. Although TS can be a chronic condition with symptoms lasting a lifetime, most people with the condition experience their worst tic-symptoms in their early teens, with improvement occurring in the late teens and continuing into adulthood.
