

DOUBLE FLAP GATE VALVES

F-Series LPTF-G Model

The LPTF-G model is designed for budget conscious customers with low pressure applications.

Meyer's F-Series Double Flap Gate Valve model LPTF-G with gravity / counterweight actuation, is used for simple low-pressure basic dust collection applications with maximum 30" WC pressure differentials where low cost is critical and a rotary airlock or slide gate is unwarranted.

Operating temperatures for this type of unit are normally in the 250°F range. Used under cyclones, baghouses and collection hoppers the F-Series is a low maintenance and dependable alternative.

Features

- Counterweight operation -- Adjustable weights
- Abrasion resistant steel flaps -- Longer wear
- Carbon steel housing construction -- Standard materials for longer life
- Dutchman spool piece -- Resulting in larger capacities
- Single or double configuration -- Accommodates application needs

Industries Where Used

Cement	Limestone
Foundry	Minerals
