*Product Use Guide*

### 3 STEP APPLICATION PROCESS

Please follow these 3 steps carefully for maximum results

#### Step 1

Firstly, apply the Liquid Mascara to your lashes as a base.

#### Step 2

Open the Fiber tube **delicately**: remember that this tube contains a small quantity of **dry compact** product.

The Fibers should stick to the Fiber brush: that is to ensure you have

just the right amount every time, no dropping, no clumping.

Whilst the Mascara is **still wet**, apply the Fibers to your Lashes by **carefully tapping** (no brushing) the dry Fiber brush to the lashes: that is to ensure a controlled motion so that you apply a small and precise amount of fibers. They will adhere to the lashes where applied.

- ★ Be careful **not** to apply them **to close to the base of the lashes** to avoid Fibers dropping from the brush into your eyes.
- ★ Also be careful **not** to add **too many Fibers at a time** to prevent clumping.

You would have to repeat the process to add more volume and length. The more layers, the more fullness and length.

#### Step 3

Seal the Fibers in, with a coat of Liquid Mascara.

This will align the Fibers with your natural lashes and create volume and length and create defined lashes.

This step is also essential to avoid Fibers dropping.

Repeat until desired effect is achieved. Your last layer should always be sealed by the Mascara.

#### Removal

Simple cleaning with facial cleanser and warm water

#### More Catzeyes Star Tips

- ★ As with any mascara, please remember to **seal** your mascara **tube tightly** so that the product doesn't dry out.
- ★ If you don't use the liquid mascara for a while, please gently shake it to ensure the mascara covers the brush evenly.
- ★ Please **never** shake the Fiber tube as the Fibers need to stay compact!
