# TaceraTag

Protecting Vulnerable  
People and Valuable Assets

- Easy to install and attach
- Tamper proof
- Lightweight
- Hypoallergenic

## Create a more secure environment for vulnerable people and protect your valuable assets

Part of a healthcare facilities mandate is to be able to provide a secure and protected environment for its vulnerable patients and assets. Austco's TaceraTag does just that.

### What is TaceraTag?

The TaceraTag is a non-intrusive soft band fitted with a device which uses proven and reliable tracking technology, to provide a high level of security and protection against baby abduction or mother/baby mismatch, wandering patients and theft or misplacement of expensive equipment.

### How does it work?

Once applied and operational TaceraTag has a range of triggers which signal an alarm across a number of different devices, immediately notifying healthcare and security personnel, if any of the following potentially dangerous situations occur:

- A tag strap being cut, tampered with, or removed.
- If an attempt to tailgate is made (closely following or joining an authorised person through a monitored exit).
- A tag wearer is identified as being in prohibited location or exiting through a protected doorway without proper authorisation.
- If a tag is low on power.
- When, in the case of mother and baby they have been mismatched.

Depending on requirements, TaceraTag readers can be placed at key exits and specified locations throughout the safe area and the facility, enabling you to adjust the level of detection to suit the healthcare facility's changing environment. Furthermore, TaceraTag's

intelligent software provides a list of all tag wearers, logging any event, it's time, date and action taken, allowing for swift recall and reporting of events for audit trail and security review.

### Key Features of TaceraTag

- Secure
- Easy to install and attach
- Little training and administration time required to operate the system
- Proven technology
- Lightweight
- Tamper proof
- Water resistant
- Hypoallergenic
- Discreet
- Comfortable
- Require minimal maintenance
- Fully integrated with Tacera IP-based Critical Communication System
- Prevent human errors

### Security For Mothers And Babies

TaceraTag offers a secure and versatile infant protection solution, giving mothers and healthcare personnel piece of mind against the risk of baby abductions and baby mismatches.

The lightweight easy to apply tag is made to fit snugly but comfortably around the baby’s ankle, while the mother’s tag is fitted around the wrist. Once in place, the tags are activated and the infant protection system is integrated to the Tacera IP-based Critical Communication System, allowing staff to monitor the security of the ward efficiently at all times.

### Where infant abductions mostly happen within a healthcare facility?

### Protecting Your Vulnerable Patients

Ideally suited to healthcare environments with patients requiring more strict supervision, such as:

- Patients with Alzheimer’s/Dementia
- Patients with mental/cognitive impairment
- Patients with head injuries or undergoing neurological treatment
- Psychiatric patients

TaceraTag negates the need for intrusive assistance for patients more prone to wandering, while maintaining full movement from staff and enabling them to spend more time with patients in need of more assistance.

The solution enables staff to track and protect patients from accidentally wandering off the ward, alerting staff should patients find themselves in dangerous areas and including the ability to lock down specific doors should a wandering patient come within a specified range preventing a potential elopement.

### Eloperments or injuries suffered by patients while wandering can have devastating affects on patients and staff

## Safeguard your Valuable assets

For many healthcare facilities, managing large numbers of mobile equipment is challenging. A significant number of assets are often lost, stolen or misplaced which can have a serious impact on patient care and efficiency.

TaceraTag also offers peace of mind against this scenario. Once tagged, the equipment is continuously monitored, notifying security if items are removed without authorisation. Enabling staff to not worry about lost equipment and focus solely on the wellbeing of patients and other key duties.
