Achieve your facility goals with **Ease and Simplicity**

Reports and Dashboards

TACERA PULSE

Nurse Call Performance Portal

Tacera Pulse is part of a suite of software applications for personal computers or mobile devices that delivers business intelligence information to an interactive dashboard, allowing you to make data driven decisions using current data from your organisation.

Reports

With the urgent need to identify methods for validating nurse workload, productivity, and system effectiveness, facility managers and administrators now have a solution that tracks and manages critical caregiver-to-patient interactions and events.

Tacera Pulse monitors nurse call alarms, collects alarm and response data, then creates metrics for measuring and analysing performance outcomes. Facility and workflow data is now routinely captured and easily accessible.

Tacera Pulse Reports gives decision makers the information they need to make informed decisions that optimise operations. Streamlining complex processes; such as scheduling staff, managing housekeeping, and overseeing maintenance creates more time to focus on high-quality patient care.
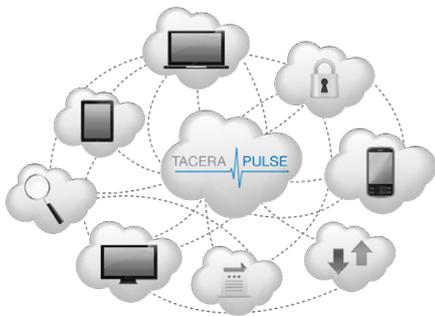

Dashboards

Dashboards provide a visual presentation of your facility's KPIs (Key Performance Indicators), which allows you to effortlessly monitor many areas of operational performance simultaneously. Tacera Pulse dashboards are highly configurable and allow users to set preferences in terms of how their dashboards display and are organised.

SIMPLE TO USE AND
LEARN

TACERA PULSE

## Looks great, functions even better.

Technology

Tacera Pulse is a web-based KPI portal that uses modern web technology to create an intuitive, interactive desktop experience.

Its responsive design allows the application to run on a desktop browser, tablet, or smartphone. A cloud based or hybrid installation reduces or eliminates the need to purchase and maintain server hardware and software.

User-Friendly Graphical Interface

Tacera Pulse comes with an easy-to-use interface developed with input from healthcare professionals. Accomplish your facility goals with minimal training and administrative costs, thanks to Tacera Pulse's intuitive navigation and interactions.

Use a mouse or a touch-enabled device to efficiently monitor and report on the state of your facility.

HIGH QUALITY
CARE

TACERA PULSE

Improve Operational Efficiencies

Comprehensive and Robust Reporting

The healthcare industry is both competitive and highly regulated. Healthcare facilities are required to report on quality and capture key metrics necessary to validate their ability to provide a safe and efficient patient environment.

Using Tacera Pulse's enterprise level Reporting module, healthcare facilities can aggregate data on specific KPI's (key performance indicators), giving facilities the ability to measure data with the granularity needed to achieve facility goals which is essential to auditing performance and improving patient workflow.

Personalised Dashboards

Tacera Pulse's personalised Dashboards provide hospital staff the ability to monitor call activity, staff response and other KPIs through an interactive dashboard.

In addition, facility management and administrators can generate several types of reports, capturing metrics and information critical to validating nurse workload, increasing productivity and system effectiveness, and ultimately increasing the quality of patient care.

Manage performance data and optimise your facility strategy in real-time

Features and Benefits

Features	Benefits
Centralised database for dashboard and reporting	Utilises a Cloud infrastructure for deployment, which allows for greater accessibility, flexibility, reliability and scalability
Configurable dashboards	Provides flexible dashboard configurations. Each dashboard can display multiple widgets which are configured to display the exact KPI information that each user wants to see based on location(s), alarm type(s), etc.
Intuitive user interface	Reduces training and administration costs by providing an intuitive and easy to learn interface designed with the contribution from Nurses and CNO's
Comprehensive & robust reporting	Customisable reporting of all alarms and responses to critical events
May help improve patient and staff satisfaction	Helps improve patient satisfaction, which may translate into improved HCAHPS scores
Integration	Collects and measures data that can be analysed to better manage staff and patient loads
Browser based	Provides greater accessibility. No installation is required, so users can access the system using their current browser (Internet Explorer, Firefox, Safari, Chrome)
Active Directory integration	Simplifies management and control of usernames and passwords
