MOVING VAN BODY

BODIES HIGHER
HELD TO A STANDARD

QUALITY BUILT IN

Professional movers require a specialized body that will hold up under heavy use, shifting loads, and unique delivery demands. Our moving body has been developed with industry leading movers and tailored to their unique needs.

Each body is custom built to order and incorporates many of the same industry leading features of our aluminum body, with the addition of features specifically designed for movers.

➤ INTERIOR

Double slotted logistic posts provide sidewall strength and versatility for securing cargo. A variety of plywood options are fitted between the posts for a smooth wall, that won't snag cargo. Plywood roof lining is a popular option.

➤ FLOOR

High quality 1 1/8" laminated domestic hardwood is standard in our moving body. The entire floor receives multiple coats of polyurethane varnish for a lasting protection that's smooth and appealing. Screw holes are filled and sanded prior to varnishing as an option.

➤ ROOF

Our unique two-piece roof-rail design not only increases strength, but can easily be replaced (if damaged) without disturbing the sidewalls, front wall, or rear frame. Durable, aluminum castings on each corner increase strength while the front "zephyr" improves aerodynamics and fuel efficiency.

➤ PEAK

To provide the maximum capacity, peaks come standard for additional storage. This extra storage area is perfect for lightweight or fragile cargo, but our unique design is strong enough to hold heavy loads. A variety of sizes are available.

➤ REAR FRAME

Stainless steel rear frames are standard, providing a strong and durable frame that will look good throughout the body's life. This frame is both internally and externally reinforced.

➤ SIDE & REAR DOORS

Our swing doors are custom built using DuraPlate® panels with stainless steel hardware, aluminum hinges, and replaceable stainless steel pins. These doors resist corrosion and impact, and won't delaminate or rot like standard wood core doors.

➤ WEATHERPROOF UNDERCOATING

To protect from the harsh environment, the underside is undercoated after the body is installed on the chassis to seal the interior and protect the underbody from corrosion.

➤ WALKBOARD & WALK RAMPS

A variety of storage options are available for walkboards and walk ramps, for easy access and security.

U.S. TRUCK BODY – MOVING VAN

TRUCK BODY OPTIONS AND FEATURES

- Aluminum or Translucent Roof
- Interior Roof Lining – plywood on roof ceiling, 48" center lined or full width
