KILTRONX ENVIRO SYSTEMS, LLC

Where to Use Live Free Products

GOAL is to place the Live Free Products in the path of the moving bedbug or in areas where they nest or colonize.

Bedbug Facts:

- Bedbugs like dark places.
- Bedbugs are attracted to carbon dioxide (CO₂).
- Bedbugs are drawn/attracted to warmth and blood.
- Bedbugs hide underneath, in cracks/crevices, and behind furniture (headboards, nightstands, mattresses, box springs, sofas, chairs, TV cabinets, chest of drawers, and other furniture items).
- Bedbugs hide inside small cracks and crevices (along baseboards, inside outlet and light switch plates, in corners of closets and walls).

BEDBUG BARRIER SYSTEMS

Effectively Controls: Bedbugs, Fleas,
Ticks, Mites, Scabies, Silverfish, Carpet Beetles,
Cockroaches & German Cockroaches

Emergency Response and Integrated Barrier 3-Step System

1.

Choose Your Purpose

- Prevention**
select: Room Perimeter Kit
- Response**
select: Emergency Response Kit

2.

Select Your Type of Room

- Bedroom**
select: Mattress Cover
- Living Room/Any Room**
select: Perimeter Kit and Furniture Kit

3.

Install

- Combine the two kits to install the complete barrier system
- Accessories available for unique rooms where additional materials are required

BEDBUG BARRIER SYSTEMS

Effectively Controls: Bedbugs, Fleas,
Ticks, Mites, Scabies, Silverfish, Carpet Beetles,
Cockroaches & German Cockroaches

Live Free Bedbug Quick Start Information Guide

1. Bedbugs & Their Behavior

• Exoskeleton (exterior) insects

- Feed on blood (only)
- Life cycle: egg – nymph – adult requires blood meal to progress thru growth stages
- Can live 1 year +
- Depending on number of feedings, female can produce hundred's of eggs over lifetime

• Cryptic & Nocturnal

- Live hidden in cracks, crevices, behind or under objects
- Become active at night, normally in early morning hours
- Attracted to CO2 produced by humans and body heat & move to it
- Once they find blood meal, they may bite several times to find proper feeding location and will return to their hiding space after feeding

• General Facts

- Bedbugs crawl and jump but do not fly
- Hitchhikers..... primary method of moving from place to place is in boxes, containers, luggage etc.....
- Developing resistance to approved chemical agents
- Health & Liability costs associated with bedbugs are escalating rapidly.
- Increasing evidence that bedbug bites can cause infection and transmit disease
- Beyond physical damage, the mental trauma/anguish of bedbug bites can paralyze people and make them fearful of bugs being in their own home.
- Cost to eradicate in homes now can be thousands of dollars with loss of personal possessions and furniture.
- Hotels and property owners are seeing more claims and law suites filed

2. Concept & Strategy of KiltronX Products

- Create a *barrier* between the bedbugs and humans so that as they nest and move they will encounter and move across the KiltronX products.
- KiltronX textiles are the vehicle (carrier) that is used to deploy the killing compound – KiltreX

- KiltreX is a proprietary compound that includes diatomaceous earth, soybean extracts and other inert ingredients.
- KiltreX is "green" compound. EPA Exempt & "FDA Gras"
- It acts as a "passive" killer in that it is in place and ready for a bug to crawl across fabric surface.
- Shelf life is 1-2 years. (Can't be washed or saturated with water)
- It was develop based on organic farming pest control technology
- KiltreX (microscopic powder) is released from the KiltronX fabrics and bugs move across them and coats the exterior / skeleton of the bug.
- KiltreX interrupts the normal function of the skeleton of the bug and kills it through mechanical action rather than through an ingested poison.
- KiltronX products are designed to work together to provide an integrated solution. (Work from outside perimeter of room inward to furniture)

- **Installation & Maintenance** - See detailed instruction pages

3. General Comments

- Mattress encasements are great for protecting mattress but do nothing to protect people
- Focus must move away from the bed only toward attacking the problem at the room / home level. Find hiding places and place KiltronX products there.
- Current chemical methods are limited:
 - Increasing resistance
 - Do not support long term control due to limited residual life after application
- Heat
 - Very expensive
 - Can damage personal items
 - Bugs retreat into walls and deep into furniture (use as insulation) to avoid heat. Scatters them rather than kills them in many cases.
